1. The Resource Economy of Plant Reproduction 1

P. Staffan Karlsson, Marcos Méndez

- I. Introduction 1
- II. Historical Prelude 1
- III. The Principle of Allocation 3
- IV. Reproductive Effort 3
 - A. Definitions 3
- V. Problems in Determining Reproductive Allocation 5
 - A. The Currency 6
 - B. Definition of Reproductive versus Nonreproductive Plant Parts 7
 - C. When Should Reproductive Allocation be Measured? 8
- VI. Dynamic Resource Allocation 8
- VII. Empirical Patterns in Reproductive Allocation 9
 - A. RA and Life History 10
 - B. RA in Relation to Succession, Competition, and Disturbance 13
 - C. RA in Relation to Environmental Stress 18
 - D. Genetic Variation in RA 19
 - E. What does the Evidence Say? 20
- VIII. Costs of Reproduction 20
 - A. Methodological Issues 21
 - B. Quantitative Links between Reproductive Allocation and Costs 22
- IX. Conclusions 29
- Acknowledgments 30
- References 30
- Appendix 40

2. Meristem Allocation as a Means of Assessing Reproductive Allocation 51

Kari Lehtilä, Annika Sundås Larsson

- I. Introduction 51
- II. Developmental and Physiological Background of Meristem Allocation 52
- III. Meristem Structure and Generation of Plant Architecture 53
- IV. Axillary Bud Formation and Subsequent Development of the Bud 55
- V. Genetics and Physiology of the Floral Transition 56
- VI. Meristem Types 57
- VII. Meristem Models 58

VIII. The Assumptions of the Models	62
IX. The Impact of Meristem Allocation on Reproductive Allocation	64
X. Plasticity of Meristem Allocation	65
XI. Major Genes of Meristem Allocation	67
XII. Resource Levels and Meristem Limitation	68
XIII. The Function of Dormant Buds	69
XIV. Meristem Allocation as a Surrogate in Estimation of Resource Allocation	70
XV. Conclusions	71
Acknowledgments	72
References	72

3. It Never Rains but then it Pours: The Diverse Effects of Water on Flower Integrity and Function 77

Candace Galen

I. Introduction	77
II. The Functional Ecology of Water in the Life of a Flower	78
A. Water Use by Flowers	78
B. The Water Cost of Flowers	80
C. Water as a Regulator of Flower Microclimate	81
D. Water as a Conduit for Environmental Sources of Flower Damage	81
III. Water Relations and the Evolution of Floral Traits	82
A. Floral Traits as Resource Sinks: The Resource Cost Hypothesis	82
B. Floral Traits and Water in the Flower Microclimate: Parental Environmental Effects	84
C. Plastic Responses of Floral Traits to Water Availability: Impact on Plant-Pollinator Interactions	88
IV. Conclusions	90
Acknowledgments	91
References	92

4. The Allometry of Reproductive Allocation 97

Gregory P. Cheplick

I. Introduction	97
II. Definition and Analysis of RA in Relation to Allometry	99
III. Allometry Theory and RA	101
IV. Relation of RA to Relative Fitness	105
V. Allometry of Modules	108
VI. Allometry of RA and Plant Life History	112
VII. Determinants of Allometry	122
VIII. Conclusions	123
References	124

5. Sex-specific Physiology and its Implications for the Cost of Reproduction 129

Andrea L. Case, Tia-Lynn Ashman

I. Introduction	129
II. Sexual Polymorphisms	131
III. Costs of Reproduction	131
A. Male Costs	132
B. Female Costs	133
C. Common Flowering Costs	133
D. Demographic Costs	134
IV. Avenues for Mitigating the Cost of Reproduction	136
A. Photosynthetic Reproductive Organs	136
B. Increased Vegetative Photosynthesis	138
C. Increased Resource Uptake and Resource Use Efficiency	138
D. Reabsorption	139
V. Predictions for Sex-specific Physiology Based on Differential Reproductive Costs	139
A. Predictions for Females and Males	140
B. Predictions for Hermaphrodites in Monomorphic Sexual Systems: Cosexuality, Monoecy, and Diphasy	141
C. Predictions for Hermaphrodites in Dimorphic Sexual Systems: Gynodioecy and Subdioecy	142
VI. Potential Causes of Sex-specific Physiology	143
A. Physiological Differences Reflect Plastic Responses to Contrasting Reproductive Allocation between Sexes	143
B. Selection Modifies Physiological Traits after the Separation of the Sexes to Meet Differential Reproductive Costs	144
C. Physiology Changes as a Correlated Response to Selection on Other Traits (e.g., via Pleiotropy or Linkage)	144
VII. Available Data on Sex-specific Physiology	145
VIII. Recommendations for Future Study	151
Acknowledgments	151
References	151
Appendix	157

6. Time of Flowering, Costs of Reproduction, and Reproductive Output in Annuals 159

Tadaki Hirose, Toshihiko Kinugasa, Yukinori Shitaka

I. Introduction	159
II. Modeling of Reproductive Output	160
III. Timing of Reproduction	162
A. Effect of Nutrient Availability	162
B. Effect of Germination Dates	164
C. Effect of Change in Flowering Time	166

IV. Costs of Reproduction	172
A. Reproductive Effort and the Relative Somatic Cost	174
B. Nitrogen Use Efficiency	176
V. Reproductive Nitrogen	180
VI. Conclusions	186
References	186

7. The Shape of the Trade-off Function between Reproduction and Growth 189

Edward G. Reekie, German Avila-Sakar

I. Introduction	189
II. Methods of Describing the Trade-off Function	191
III. The Shape of the Trade-off Function in <i>Plantago</i>	195
IV. Impact of Reproduction on Resource Uptake	196
V. Differences in the Resource Requirements of Vegetative versus Reproductive Tissue	199
VI. Effect of Nitrogen versus Light Limitation	205
VII. Effect of Growth Pattern	206
VIII. Conclusions	211
Acknowledgments	212
References	212

8. On Size, Fecundity, and Fitness in Competing Plants 215

Lonnie W. Aarssen

I. Introduction	215
II. Defining the Components of Competitive Ability for Between-species Plant Competition: Lessons from Within-species Competition	219
III. Predicting Fecundity under Competition	220
IV. Relationships among Plant Traits Affecting Fecundity under Competition: Alternative Ways to Compete Intensely While Avoiding Competitive Exclusion	224
V. Preliminary Empirical Tests	231
VI. Predicting Winners from Rank Orders in Plant Competition: Lessons from Sports Competition	235
VII. Conclusions	241
Acknowledgments	242
References	242
