Preface xvii

1

Genetic Control of Testis Determination

V. R. Harley

- I. Introduction 1
- II. SRY, a New Candidate for the Testis Determining Factor 3
 - A. Mapping the Human Y Chromosome 3
 - B. ZFY 4
 - C. Discovery of SRY 5
 - D. Direct Evidence that SRY Is TDF 6
 - E. SRY in True Hermaphrodites 10
- III. Biochemical Properties of SRY 10
 - A. SRY Is an "HMG Box" Protein with Sequence- and Structure-Specific DNA Binding Activity 10
 - B. DNA Binding Activity of Recombinant SRY from XY Females 13
 - C. Possible SRY Function *in Vivo* 13
- IV. Perspectives and Conclusions 14
- References 16

2

Cell Biology of Testicular Development

Lauri J. Pelliniemi, Kim Fröjdman, & Jorma Paranko

- I. Introduction 21
- II. Pregonadal Placode 22

A. Surface Epithelial Cells	22
B. Mesenchymal Cells	22
C. Primordial Germ Cells	22
III. Gonadal Ridge and Indifferent Gonad	24
A. Surface Epithelial Cells	24
B. Mesenchymal Cells	25
C. Primordial Germ Cells	25
D. Vascular Endothelial Cells	27
E. Gonadal Blastema and Somatic Cord Cells	27
IV. Testis	29
A. Tunica Albuginea	29
B. Testicular Cords	31
C. Interstitium	39
V. Basement Membranes and Extracellular Matrix	46
A. Gonadal Ridge	46
B. Indifferent Gonad and Testis	47
VI. Regulatory Mechanisms	48
A. Initiation of Gonadal Differentiation	48
B. Regulation of Gonadal Sex Differentiation	49
C. Regulation of Sertoli Cell Proliferation	50
D. Regulation of Germ Cells	51
E. Inhibition of Spermatogonial Meiosis	52
F. Endocrine and Paracrine Regulatory Relationships	52
G. Other Genetic Factors Related to Testicular Differentiation	53
References	54

3

Nuclear Morphogenesis during Spermiogenesis

Marvin L. Meistrich

I. Introduction	67
II. Spermiogenesis	68
III. Principles of Nuclear Shape Determination	71
IV. Elements Possibly Involved in Spermatid Nuclear Shaping	72
A. DNA and Chromosome Structure	72
B. Chromosomal Proteins	74
C. Nuclear Matrix	77
D. Perinuclear Theca	78
E. Manchette and Nuclear Ring	79
F. Subacrosomal Actin	81
G. Sertoli Cell Structures	82
V. Specific Forces Required in Spermatid Nuclear Shaping	84

VI. Testing the Roles of Elements in Shaping	88
References	92

4

Hormonal Control of Spermatogenesis

Gerhard F. Weinbauer & Eberhard Nieschlag

I. Introduction	99
II. Organization and Kinetics of Spermatogenesis	100
III. Initiation of Spermatogenesis by Testosterone	102
A. Rodents	102
B. Nonhuman Primates and Men	103
IV. Maintenance and Reinitiation of Spermatogenesis by Testosterone	104
A. Rodents	104
B. Nonhuman Primates and Men	107
V. Intratesticular Testosterone and Spermatogenesis	108
VI. Initiation of Spermatogenesis by FSH	111
A. Rodents	111
B. Nonhuman Primates and Men	112
VII. Maintenance and Reinitiation of Spermatogenesis by FSH	112
A. Rodents	112
B. Nonhuman Primates and Men	114
VIII. Hormonal Control of Male Fertility for Contraception	117
IX. Intratesticular Targets of Testosterone and FSH	118
X. Collaborative Effects of Testosterone and FSH on Spermatogenesis	121
XI. Nongonadotropic Hormones and Spermatogenesis	124
XII. Is the Duration of Spermatogenesis under Hormonal Control?	126
XIII. Summary and Concluding Thoughts	129
References	130

5

Patterns of Expression and Potential Functions of Proto-oncogenes during Mammalian Spermatogenesis

Martin A. Winer & Debra J. Wolgemuth

I. Introduction	143
II. Proto-oncogenes Known to Be Expressed in the Mouse Testis	144
A. Proto-oncogenes that Might Play a Role in Fetal Development of the Testis	144

B. Proto-oncogenes that Might Be Important in Stem Cell Stages	148
C. Proto-oncogenes that Could Be Implicated in Meiosis	155
D. Proto-oncogenes that Could Regulate Spermiogenesis	159
E. Expression of Cellular Oncogenes in Nongerminal Compartments of the Testis	161
F. Is There Any Evidence that Proto-oncogenes Might Function in the Mature Sperm, Particularly during Fertilization?	165
III. Expression of Proto-oncogene-Related Genes in the Testis	166
IV. Summary and Future Directions	167
References	168

6

Gene Expression during Spermatogenesis

E. M. Eddy, Jeffrey E. Welch, & Deborah A. O'Brien

I. Introduction	181
II. Regulation of Gene Expression in Spermatogenic Cells	182
A. Transcription Factors	182
B. Spermatogenic Cell-Specific Promoter Regions	191
C. Translational Regulation	195
III. Transgenic Mice	200
A. Spermatogenic Cell-Specific Genes	200
B. Genes Expressed in Somatic and Germ Cells	203
C. Expressed Transgenes that Affect Fertility	205
D. Insertional Mutations that Affect Fertility	208
IV. Genomic Imprinting and Gene Methylation	210
A. Imprinting of Endogenous Genes	210
B. Imprinting of Transgenes	212
C. Methylation of Transgenes	213
D. Methylation of Endogenous Genes	213
V. Chromosomal Location of Spermatogenic Cell-Specific Genes	215
VI. Conclusions	216
References	218

7

Molecular Basis of Signaling in Spermatozoa

Daniel M. Hardy & David L. Garbers

I. Introduction	233
II. Motility Regulation	234

A. Sea Urchins	234
B. Mammals	243
III. Acrosome Reaction	249
A. Sea Urchins	249
B. Mammals	252
IV. Summary	259
References	259

8

Paracrine Mechanisms in Testicular Control

B. Jégou & R. M. Sharpe

I. Introduction	271
II. Germ Cell-Sertoli Cell Cross Talk	271
A. Anatomical Devices	271
B. Functional Interactions	272
III. Peritubular-Seminiferous Epithelium Cross Talk	284
IV. Sertoli Cell-Leydig Cell Cross Talk	286
A. Regulation of Leydig Cell Numbers	287
B. Modulation of Leydig Cell Function by Sertoli Cells	291
C. Mediators of Sertoli Cell-Leydig Cell Interactions	293
V. Conclusions	293
References	295

9

Molecular Biology of Iron Transport in the Testis

Steven R. Sylvester & Michael D. Griswold

I. Introduction	311
II. Model of Testicular Iron Transport	312
III. Transferrin	314
A. Transferrin Protein Structure	314
B. Transferrin Gene Structure	314
C. Regulation of Transferrin Expression	315
IV. Transferrin Receptor	316
A. Transferrin Receptor Protein Structure	316
B. Transferrin Receptor Gene Structure	317
C. Regulation of Transferrin Receptor Expression	317
V. Ferritin	318
A. Ferritin Protein Structure	318

B. Ferritin Gene Structure	318
C. Regulation of Ferritin Expression	318
VI. Hemiferrin	319
A. Discovery of Hemiferrin	319
B. Evidence that Hemiferrin cDNA Is Translated	319
C. Potential for Hemiferrin Iron Binding	320
D. Other Structural Considerations of Hemiferrin	320
VII. Stage-Related Expression of Iron Transport Components	321
VIII. Summary	323
References	323

10

Molecular Biology of Testicular Steroid Secretion

Peter F. Hall

I. Biosynthesis of Testosterone	328
A. Substrate	328
B. Pathway	328
C. Arrangement in the Cell	329
D. Steroidogenic Cytochromes P450	330
E. Individual Enzymes	337
II. Steroidogenic Membranes	343
A. Inner Mitochondrial Membrane	343
B. Smooth Endoplasmic Reticulum	344
III. Regulation of Testicular Steroidogenesis	348
A. Introduction	348
B. Site of Action of cAMP in the Steroidogenic Pathway	349
C. Mechanism of Action of cAMP	351
IV. Summary and Conclusions	369
References	370

11

Hormonal Control Mechanisms of Leydig Cells

Ilpo Huhtaniemi

I. Introduction	383
II. Ontogeny of Tropic Regulation of Leydig Cells	384
A. Acquisition of LH Responsiveness	384

B. Induction of Steroidogenesis with Respect to LH Responsiveness	386
C. Possible Inducers of Leydig Cell Differentiation	386
III. Molecular Aspects of LH Receptor Function	388
A. Structure of the LH Receptor Gene	388
B. Multiple LH Receptor mRNA Species	390
C. Regulation of LH Receptor Gene Expression	390
D. Structure-Function Relationships of the LH Receptor	391
IV. Signal Transduction Systems Involved in LH Action in Leydig Cells	391
A. cAMP	391
B. Calcium	393
C. Phosphoinositides and Protein Kinase C	394
D. Cl^- Channels	395
E. cGMP and Tyrosine Kinase	396
F. Mechanisms Involved in Ligand-Induced Refractoriness to LH Action	396
V. Effects of Hormones Other than LH on Leydig Cells	397
A. Prolactin	399
B. Growth Hormone	399
C. Insulin	400
D. Posterior Pituitary Hormones	400
E. Atrial Natriuretic Peptide	401
F. Steroid Hormones	401
G. Circulating LH Inhibitors	401
VI. Conclusions	402
References	403

12

Growth Factors in the Control of Testicular Function

**David M. Robertson, Gail P. Risbridger, Mark Hedger,
& Robert I. McLachlan**

I. Introduction	411
II. Role of Growth Factors in the Development and Function of Leydig Cells	412
A. Development of Fetal Leydig Cells	413
B. Development of Adult Leydig Cells	414
III. Growth Factors and Interactions between the Testis and Immune System	416
A. Intratesticular Immune Responses	416
B. Testis-Lymphocyte Interactions	417

- C. Testis-Macrophage Interactions 419
- D. Physiological Significance 421
- IV. Role of Growth Factors in Sertoli Cell Development and Function 421
- V. Growth Factors in the Control of Spermatogenesis 425
 - A. Activin 426
 - B. Interleukin 1 427
 - C. Insulin-like Growth Factor 1 428
 - D. Other Growth Factors 428
- References 428

13

Vascular Controls in Testicular Physiology

Anders Bergh & Jan-Erik Damber

- I. Introduction 439
- II. Functional Anatomy of the Testicular Vasculature 440
 - A. Arteries 440
 - B. Capillaries and Local Variations 441
 - C. Veins 442
 - D. Pampiniform Plexus 443
 - E. Lymph Vessels 443
 - F. Vascular Innervation 444
- III. Testicular Blood Flow 444
 - A. Catecholamines and Acetylcholine 445
 - B. Serotonin, Histamine, Prostaglandins, Kallikrein, and Adenosine 446
 - C. Luteinizing Hormone/Human Chorionic Gonadotrophin 447
 - D. Luteinizing Hormone Releasing Hormone 448
 - E. Arginine Vasopressin 448
- IV. Testicular Microcirculation 448
 - A. Testicular Microvessels—General Aspects of Structure and Function 448
 - B. Precapillary Control of Microcirculation—Vasomotion 451
 - C. Postcapillary Control of Vascular Permeability 453
 - D. Development and Seasonal Variations 455
 - E. Microcirculation and the Local Immune Environment 455
- V. Local Cellular Control of the Testicular Vasculature 456
 - A. Leydig Cells 456
 - B. Seminiferous Tubules 458
 - C. Testicular Mast Cells 460
 - D. Testicular Macrophages 460

VI. Testicular Pathophysiology and Microcirculation	460
VII. Concluding Remarks	461
References	462

Index	469
-------	-----

Numbers in parentheses indicate the page on which the author contributed his paper.

Anders Bergh (439), Department of Urology and Andrology, University of Umeå, S-901 87 Umeå, Sweden

Jan-Erik Damber (439), Department of Urology and Andrology, University of Umeå, S-901 87 Umeå, Sweden

E. M. Eddy (181), Cancer Biology Section, Laboratory of Reproductive and Developmental Toxicology, National Institute of Environmental Health Sciences, National Institutes of Health, Research Triangle Park, North Carolina 27709

Kim Fröjman (21), Laboratory of Testicular Microscopy, University of Turku, SF-20520 Turku, Finland

David L. Garbers (233), Howard Hughes Medical Institute, and Department of Pharmacology, Southwestern Medical Center, University of Texas, 5323 Harry Hines Boulevard, Dallas, Texas 75231

Michael D. Griswold (7-1), Department of Biochemistry and Biophysics, Washington State University, Pullman, Washington 99164

Peter F. Hall (328), Department of Endocrinology, Prince of Wales Hospital, Randwick, NSW 2031, Australia

Daniel M. Hardy (233), Howard Hughes Medical Institute, and Department of Pharmacology, Southwestern Medical Center, University of Texas, Dallas, Texas 75231

V. R. Harley (1), Department of Genetics, University of Cambridge, Cambridge CB2 3EH, England

Mark Hedger (411), Institute of Reproduction and Development, Monash University Medical Centre, Clayton, 3168 Victoria, Australia

Epo Huhtaniemi (387), Department of Physiology, University of Turku, SF-20520 Turku, Finland

B. Jégou (271), Groupe d'étude de la Reproduction chez le Mâle (G.E.R.M.), Université de Rennes I, 35-42 Rennes Cedex, Bretagne, France
