
CONTENTS

Contributors	xiii
Preface	xvii

PART I Reviews

1. A History of Laser Scissors (Microbeams)

Michael W. Berns

I. Introduction	4
II. Prehistory of Laser Scissors	5
III. The Ruby Laser Microbeam: The Beginning	8
IV. Laser Systems: Beyond the Ruby Laser	9
V. Cells and Organelles	15
VI. Embryos and Fate-Mapping	38
VII. Technology and the Future	39
VIII. Appendix	42
References	50

2. Selected Applications of Laser Scissors and Tweezers and New Applications in Heart Research

Karl O. Greulich

I. Laser Micromanipulation—Early European Contributions	60
II. Laser Microinjection of Genetic Material into Plant Cells	61
III. Preparation of Plant Protoplast Membrane and Chromosome Segments	65
IV. Laser-Induced Cell and Protoplast Fusion	67
V. Optical Tweezers Complement the Laser Microbeam	68
VI. The Attack of a Natural Killer Cell on a Leukemia Cell	71
VII. Laser Microbeams and Optical Tweezers for Heart Research	74
References	79

3. Laser-Based Measurements in Cell Biology

Elliot L. Botvinick and Jagesh V. Shah

I. Introduction	82
II. Laser-Based Imaging Methods	83
III. Measurement of Cellular State: Molecular Parameters	90
IV. Summary	101
References	101

PART II Mechanisms of Laser Interactions

4. Mechanisms of Laser Cellular Microsurgery

Pedro A. Quinto-Su and Vasan Venugopalan

I. Introduction	114
II. Lasers and Microbeam Optics	116
III. Incorporating a Laser Microbeam Within a Microscope Platform	124
IV. Linear Absorption and Photothermal, Photomechanical, and Photochemical Processes	128
V. Nonlinear Processes	133
VI. Thermal, Mechanical, and Chemical Effects Generated by Laser-Induced Plasma Formation	140
VII. Examination of Laser Parameters Used in Laser Microbeam Applications	145
VIII. Concluding Thoughts	148
References	149

5. Principles of Laser Microdissection and Catapulting of Histologic Specimens and Live Cells

Alfred Vogel, Verena Horneffer, Kathrin Lorenz, Norbert Linz, Gereon Hüttmann, and Andreas Gebert

I. Introduction	154
II. Features of the Microbeam System and Materials Used	157
III. Dissection and Catapulting of Histologic Specimens	159
IV. Dissection and Catapulting of Live Cells	185
V. Conclusions and Outlook	197
References	200

6. Physics of Optical Tweezers

Timo A. Nieminen, Gregor Knöner, Norman R. Heckenberg, and Halina Rubinsztein-Dunlop

I. Introduction to Optical Tweezers	208
II. History	208
III. Basic Principles	210
IV. Fundamental Theory	220
V. Transport of Energy, Momentum, and Angular Momentum by Light	222
VI. Computational Modeling of Optical Tweezers	228
References	233

PART III Laser Scissors/Ablation

7. Laser Microsurgery in the GFP Era: A Cell Biologist's Perspective

Valentin Magidson, Jadranka Lončarek, Polla Hergert, Conly L. Rieder, and Alexey Khodjakov

I. History of the Field	240
II. Instrumentation for Subcellular Laser Microsurgery	253
References	262

8. Investigating Relaxation Processes in Cells and Developing Organisms: From Cell Ablation to Cytoskeleton Nanosurgery

Julien Colombelli, Emmanuel G. Reynaud, and Ernst H. K. Stelzer

I. Introduction	268
II. Subnanosecond UV-A Pulsed Laser Applied in a Conventional Wide-Field Microscope and Combined with FRAP	269
III. From Microsurgery to Nanosurgery: From Cell Ablation to Intracellular Manipulation	274
IV. Cytoskeleton Nanosurgery	278
V. Material and Methods	287
VI. Concluding Remarks	288
References	289

9. Fs-Laser Scissors for Photobleaching, Ablation in Fixed Samples and Living Cells, and Studies of Cell Mechanics

Alexander Heisterkamp, Judith Baumgart, Iva Z. Maxwell, Anadet Ngezahayo, Eric Mazur, and Holger Lubatschowski

I. Introduction	294
II. Methods	295

III. Ablation and Photobleaching in Fixed Samples	298
IV. Applications in Living Cells	301
V. Summary	304
References	306
10. Cellular Laserfection	
<i>Kate Rhodes, Imran Clark, Michelle Zatcoff, Trisha Eustaquio, Kwame L. Hoyte, and Manfred R. Koller</i>	
I. Introduction	310
II. Rationale	311
III. Materials and Methods	314
IV. Discussion	325
V. Summary	329
References	329
11. Chromophore-Assisted Laser Inactivation	
<i>Diane Hoffman-Kim, Thomas J. Diefenbach, Brenda K. Eustace, and Daniel G. Jay</i>	
I. Introduction	336
II. Rationale for CALI	336
III. Principle of CALI	337
IV. Applications of CALI	338
V. Methods	340
VI. Controls for CALI	346
VII. Advantages of CALI	346
VIII. Potential Pitfalls of CALI	347
IX. CALI Versus FALI	348
X. New Developments in CALI Technology	348
XI. Conclusions	350
References	351
12. Investigation of Laser-Microdissected Inclusion Bodies	
<i>Naomi S. Hachiya and Kiyotoshi Kaneko</i>	
I. Introduction	356
II. Materials and Methods	358
III. Results	363
IV. Discussion and Summary	372
References	373

13. *In Situ* Analysis of DNA Damage Response and Repair Using Laser Microirradiation

Jong-Soo Kim, Jason T. Heale, Weihua Zeng, Xiangduo Kong, Tatiana B. Krasieva, Alexander R. Ball, Jr., and Kyoko Yokomori

I. Introduction	378
II. Nd:YAG Laser Setup and Sample Preparation	384
III. Analysis of the 532-nm Laser-Induced Damage	389
IV. Analysis of Checkpoint Activation and DSB Repair Factor Targeting	391
V. Special Considerations	400
VI. Conclusion	403
References	403

14. Laser Effects in the Manipulation of Human Eggs and Embryos for *In Vitro* Fertilization

Yona Tadir and Diarmaid H. Douglas-Hamilton

I. Introduction	410
II. Laser Beam	411
III. Numerical Analysis	414
IV. Laser Drilling	420
V. Laser Settings Used in LAH Application	425
VI. Stroboscopic Image	425
VII. Conclusions	429
References	429

15. Laser Microdissection-Based Analysis of Plant Sex Chromosomes

Roman Hobza and Boris Vyskot

I. Introduction	434
II. Design of Chromosome Analyses	435
III. Laser Microdissection of Plant Chromosomes	440
IV. Application of Laser-Isolated Plant Chromosomes	445
V. Conclusions and Prospects	449
References	449

PART IV Laser Tweezers/Optical Trapping

16. Optical Tweezers: Tethers, Wavelengths, and Heat

Michael W. Berns

I. Introduction	457
II. Optimum Trapping Wavelength	460
III. Thermal Effects in a Laser Trap	462
IV. Conclusions	464
References	465

17. Cellular and Colloidal Separation Using Optical Forces	
<i>Kishan Dholakia, Michael P. MacDonald, Pavel Zemánek, and Tomáš Čižmár</i>	
I. Introduction	468
II. A Brief Review of Fluorescence-Activated Cell Sorting (FACS) and Magnetically Activated Cell Sorting (MACS)	469
III. Optical Forces for Cell and Colloidal Sorting: Theoretical Considerations	471
IV. Overview of Experimental Optical Force-Based Sorting	477
V. Flow-Free Optical Methods	480
VI. Optical Methods with Flow	485
VII. Dielectrophoresis for Microfluidic Sorting	489
VIII. Conclusions	490
References	492
 18. Laser Tweezers in the Study of Mechanobiology in Live Cells	
<i>Elliot L. Botvinick and Yingxiao Wang</i>	
I. Introduction	498
II. Rational	498
III. Methods	499
IV. Summary and Future Direction	520
References	522
 19. Optical Torque on Microscopic Objects	
<i>Simon Parkin, Gregor Knöner, Wolfgang Singer, Timo A. Nieminen, Norman R. Heckenberg, and Halina Rubinsztein-Dunlop</i>	
I. Introduction	526
II. Ways of Exerting Optical Torque	527
III. Types of Objects	530
IV. Quantitative Measurements of Optical Torque	536
V. Applications	543
VI. Conclusions	559
References	559
 20. Optical Micromanipulation Methods for Controlled Rotation, Transportation, and Microinjection of Biological Objects	
<i>S. K. Mohanty and P. K. Gupta</i>	
I. Introduction	564
II. Methods for Optically Controlled Rotation of Microscopic Objects	565
III. Methods for Optically Controlled Transportation of Microscopic Objects	580

IV. Methods for Laser-Assisted Microinjection into Targeted Cells and Potential Adverse Effect of Focused Laser Beams on Cells	588
V. Summary	594
References	594
 21. Automated Motile Cell Capture and Analysis with Optical Traps	
<i>Bing Shao, Jacyln M. Nascimento, Linda Z. Shi, and Elliot L. Botvinick</i>	
I. Introduction	602
II. Methods	605
III. Materials	613
IV. Results and Discussion	614
V. Summary	624
References	625
 22. Laser Surgery and Optical Trapping in a Laser Scanning Microscope	
<i>Jan Scrimgeour, Emma Eriksson, and Mattias Goksör</i>	
I. Introduction	630
II. Optical Manipulation Combined with Confocal/Multiphoton Microscopy	631
III. Bacterial Biology: Diffusion Studies in FtsK Cell Division Mutants	636
IV. Plant Biology: The Binding of Chloroplasts and ER	641
V. Summary	644
References	645
 PART V Laser Catapulting and Capture	
 23. Noncontact Laser Microdissection and Catapulting for Pure Sample Capture	
<i>K. Schütze, Yilmaz Niyaz, M. Stich, and A. Buchstaller</i>	
I. Introduction	650
II. Methods of Noncontact Laser Micromanipulation and Capture	652
III. High Versatility in Multiple Fields of Application	656
IV. Conclusions and Future Challenges	669
References	670
 24. Laser Capture Microdissection and Laser Pressure Catapulting as Tools to Study Gene Expression in Individual Cells of a Complex Tissue	
<i>Benayahu Dafna, Socher Rina, and Shur Irena</i>	
I. Introduction	676
II. Rationale	677
III. Methods	677

IV. RNA Isolation	680
V. RNA Quantification	681
VI. Reverse Transcription and RT-PCR	682
VII. PCR Analysis	682
VIII. Summary	686
References	687
 25. Laser Capture Microdissection in Comparative Proteomic Analysis of Hepatocellular Carcinoma	
<i>Hong-Yang Wang</i>	
I. Introduction	690
II. Rationale	691
III. Methods	692
IV. Materials	694
V. HCC Samples	694
VI. Discussion	694
VII. Summary	705
References	705
 26. Rapid Sampling for Single-Cell Analysis by Capillary Electrophoresis	
<i>Allison R. Nelson, Nancy L. Allbritton, and Christopher E. Sims</i>	
I. Introduction	710
II. Rationale	710
III. Methods	711
IV. Materials	720
V. Discussion	720
VI. Summary	721
References	721
 PART VI A Tribute to Sergej Tschachotin	
 27. Sergej Stepanovich Tschachotin: Experimental Cytologist and Political Critic (1883–1973)	
<i>Karl Otto Greulich, Alexey Khodjakov, Annette Vogt, and Michael W. Berns</i>	
References	732
 Index	745
Volumes in Series	761
