Preface	xiii

Section I: The Mitochondrion and Gametes 1

1

The Role of the Mitochondrion in Sperm Function: Is There a Place for Oxidative Phosphorylation or Is This a Purely Glycolytic Process?

Eduardo Ruiz-Pesini, Carmen Díez-Sánchez, Manuel José López-Pérez, and José Antonio Enríquez

I. Introduction	3
II. Spermiogenesis: Removing Everything But the Essential	4
III. Sperm Mitochondria Are Required for Functional Purposes	6
IV. Is Glycolysis Required for Sperm Motility?	9
V. Substrates Available for the Supply of Energy	11
VI. Concluding Remarks	13
Acknowledgments	14
References	14

2

The Role of Mitochondrial Function in the Oocyte and Embryo

Rémi Dumollard, Michael Duchen, and John Carroll

I. Introduction	22
II. Mitochondrial Generation and Distribution in Eggs and Embryos	25
III. Studying Mitochondria in Eggs and Embryos	27
IV. Mitochondria and Energy Production in the Embryo	31
V. Mitochondria and Ca^{2+} Homeostasis in Eggs and Embryos	33
VI. Ca^{2+} -Induced Mitochondrial Activity: Matching ATP Supply and Demand	34
VII. Mitochondria and Redox Metabolism in the Embryo	34
VIII. Impact of Mitochondrial Activity on Embryonic Development	37
IX. Mitochondria and Apoptosis in the Embryo	40
X. Conclusions and Perspectives	41
Acknowledgments	42
References	42

3

Mitochondrial DNA in the Oocyte and the Developing Embryo*Pascale May-Panloup, Marie-Françoise Chretien, Yves Malthiery, and Pascal Reynier*

I. Introduction	52
II. Mitochondrial DNA Structure and Function	54
III. mtDNA Content in Oocytes	57
IV. Variation of mtDNA Content and Transcripts in Early Embryonic Development	65
V. mtDNA Mutations in Oocytes and Embryos	71
VI. Conclusions and Perspectives	74
References	74

Section II: Transmission 85

4

Mitochondrial DNA and the Mammalian Oocyte*Eric A. Shoubridge and Timothy Wai*

I. Introduction	88
II. mtDNA: Structure, Organization, Replication, and Expression	89
III. Origin and Development of the Germ Line	92
IV. Transmission of mtDNA in the Female Germ Line	95
V. OXPHOS, Atresia, and Oocyte Quality	98
VI. mtDNA Copy Number in the Oocyte	99
VII. Male Transmission of mtDNA	101
VIII. Clinical Perspectives	103
IX. Conclusions and Future Prospects	105
Acknowledgments	106
References	106

5

Mitochondrial Disease—Its Impact, Etiology, and Pathology*R. McFarland, R. W. Taylor, and D. M. Turnbull*

I. Introduction	114
II. Mitochondrial Genetics	116
III. Impact	123
IV. Etiology	129
V. Pathology	137
VI. Conclusions	143
Acknowledgments	143
References	143

Cybrid Models of mtDNA Disease and Transmission, from Cells to Mice*Ian A. Trounce and Carl A. Pinkert*

- I. What Can Be Learned from Cybrids About mtDNA Disease? 158
- II. Animal Modeling of mtDNA Transmission and Human Disease:
From Transgenesis to Transmitochondrial Cybrid Models 169
- III. Summary 176
- References 176

Section III: The Use of Assisted Reproductive Technologies to Regulate mtDNA Disease 185**The Use of Micromanipulation Methods as a Tool to Prevention of Transmission of Mutated Mitochondrial DNA***Helena Fulka and Josef Fulka, Jr.*

- I. Biological Material: Oocytes and Zygotes 188
- II. Technical Equipment 189
- III. Germinal Vesicle Transfer 190
- IV. Short- and Long-Term Storage of Nuclear Material and Asynchronous
GV to Cytoplasm Transfer 194
- V. Chromosome Group Transfer 198
- VI. Transfer of Pronuclei 203
- VII. Conclusions 207
- Acknowledgments 207
- References 208

Difficulties and Possible Solutions in the Genetic Management of mtDNA Disease in the Preimplantation Embryo*J. Poulton, P. Oakeshott, and S. Kennedy*

- I. Heteroplasmy of mtDNA Presents Problems for Chorionic
Villus Sampling 214
- II. The Mitochondrial Bottleneck 217
- III. Management Options Beyond CVS 220
- References 223

Section IV: The Effects of Invasive Assisted Reproductive Technologies on mtDNA Transmission 227

9

Impact of Assisted Reproductive Technologies: A Mitochondrial Perspective of Cytoplasmic Transplantation

A. J. Harvey, T. C. Gibson, T. M. Quebedeaux, and C. A. Brenner

- I. Why Are Invasive Assisted Reproductive Technology Procedures Important? 230
- II. Cytoplasmic Transfer: Animal Models That May Assist Human Infertility Therapeutics 232
- III. The Mitochondrial Genome and Mitochondrial Biogenesis 233
- IV. Molecular Control of Mitochondrial Function in Preimplantation Embryos 237
- V. Mitochondrial Copy Number, Deletions, and Mutations 239
- VI. Oocyte and Embryo Mitochondrial Localization Patterns 242
- VII. Implications of Mitochondrial Heteroplasmy in Infertility, Mitochondrial Disease, and Stem Cell Therapeutics 243
- References 244

10

Nuclear Transfer: Preservation of a Nuclear Genome at the Expense of Its Associated mtDNA Genome(s)

Emma J. Bowles, Keith H. S. Campbell, and Justin C. St. John

- I. Introduction 252
- II. Adaptations to NT 252
- III. Applications of NT 255
- IV. Health Problems Associated with NT 257
- V. Possible Causes of NT Failure 258
- VI. Are All the Potential Reasons for Low Success Rates in NT Interlinked? 274
- VII. Conclusions 277
- References 277
