<i>List of tables</i>	xiii
<i>About the author</i>	xv
<i>Preface</i>	xvii
<i>Preface to the fourth edition</i>	xix
<i>Preface to the third edition</i>	xxi
<i>Preface to the second edition</i>	xxiii
<i>Preface to the first edition</i>	xxv
<i>Acknowledgements</i>	xxvii
1. DNA SEQUENCES, TRANSCRIPTION FACTORS AND CHROMATIN STRUCTURE	1
1.1. The importance of transcription	1
1.2. Chromatin structure and its remodelling	2
1.2.1. Chromatin structure and gene regulation	2
1.2.2. Chromatin remodelling factors	4
1.2.3. Histone modifications	5
1.3. DNA sequence elements	9
1.3.1. The gene promoter	9
1.3.2. Sequences involved in the basic process of transcription	10
1.3.3. Sequences involved in regulated transcription	11
1.3.4. Sequences which act at a distance	15
1.3.5. Negatively acting DNA sequences	20
1.3.6. Interaction between factors bound at various sites	21
1.4. Conclusions	23
References	24
2. METHODS FOR STUDYING TRANSCRIPTION FACTORS	29
2.1. Introduction	29
2.2. Methods for studying DNA-protein interactions	29
2.2.1. DNA mobility shift assay	29
2.2.2. DNaseI footprinting assay	33
2.2.3. Methylation interference assay	37
2.2.4. <i>In vivo</i> footprinting assay	38

2.3. Methods for purifying and/or cloning transcription factors	42
2.3.1. Protein purification	42
2.3.2. Gene cloning	46
2.4. Use of cloned genes	51
2.4.1. Domain mapping of transcription factors	51
2.4.2. Determining the DNA binding specificity of an uncharacterized factor	55
2.4.3. Identification of target genes for transcription factors	57
2.5. Conclusions	62
References	63
 3. RNA POLYMERASES AND THE BASAL TRANSCRIPTIONAL COMPLEX	68
3.1. RNA polymerases	68
3.2. The stable transcriptional complex	70
3.3. RNA polymerase I	71
3.4. RNA polymerase III	73
3.5. RNA polymerase II	76
3.5.1. Stepwise assembly of the RNA polymerase II basal transcriptional complex	76
3.5.2. The RNA polymerase holoenzyme	80
3.6. TBP: the universal transcription factor?	81
3.7. Transcriptional elongation	88
3.8. Conclusions	90
References	91
 4. FAMILIES OF DNA BINDING TRANSCRIPTION FACTORS	96
4.1. Introduction	96
4.2. The homeodomain	97
4.2.1. Transcription factors in <i>Drosophila</i> development	97
4.2.2. The homeobox	98
4.2.3. DNA binding by the helix-turn-helix motif in the homeobox	100
4.2.4. Regulation of DNA binding specificity by interactions between different homeobox proteins	108
4.2.5. Homeodomain transcription factors in other organisms	112
4.2.6. POU proteins	114
4.2.7. Pax proteins	124

4.3. The two cysteine two histidine Zinc finger	126
4.3.1. Transcription factors with the two cysteine two histidine finger	126
4.3.2. DNA binding by the two cysteine two histidine finger	128
4.4. The multi-cysteine Zinc finger	131
4.4.1. Nuclear receptors	131
4.4.2. DNA binding by the multi-cysteine zinc finger	133
4.5. The basic DNA binding domain	142
4.5.1. The leucine zipper and the basic DNA binding domain	142
4.5.2. The helix-loop-helix motif and the basic DNA binding domain	147
4.5.3. Dimerization of basic DNA binding domain-containing factors	149
4.6. Other DNA binding motifs	151
4.7. Conclusions	152
References	154
 5. ACTIVATION OF GENE EXPRESSION BY TRANSCRIPTION FACTORS	161
5.1. Activation domains	161
5.2. Nature of activation domains	163
5.2.1. Acidic domains	163
5.2.2. Glutamine-rich domains	166
5.2.3. Proline-rich domains	166
5.2.4. Functional relationship of the different activation domains	167
5.3. Interaction of activation domains with the basal transcriptional complex	168
5.3.1. Activators and the basal transcriptional complex	168
5.3.2. Stimulation of factor binding	170
5.3.3. Stimulation of factor activity	173
5.4. Interaction of activation domains with other regulatory proteins	177
5.4.1. The mediator complex	177
5.4.2. TAFs	180
5.4.3. CBP and other co-activators	187
5.4.4. A multitude of targets for transcriptional activators	193
5.5. Effect of transcriptional activators on chromatin structure	195
5.5.1. Effect of chromatin remodelling factors	195

5.5.2. Effect on histone modification	203
5.5.3. Transcriptional activation by chromatin structure changes and by stimulation of the basal transcriptional complex	207
5.6. Stimulation of transcriptional elongation	212
5.7. Conclusions	217
References	221
 6. REPRESSION OF GENE EXPRESSION BY TRANSCRIPTION FACTORS	229
6.1. Repression of transcription	229
6.2. Indirect repression	230
6.2.1. Inhibition of activator binding by masking of its DNA binding site	230
6.2.2. Inhibition of activator binding by formation of a non-DNA binding complex	235
6.2.3. Quenching of an activator	237
6.2.4. Degradation of an activator	238
6.3. Direct repression	239
6.3.1. Mechanisms of transcriptional repression	239
6.3.2. Direct repression by DNA binding transcription factors	240
6.3.3. Direct repression by factors binding to the basal transcriptional complex	247
6.4. Inhibition by alteration of chromatin structure	251
6.4.1. Effect of repressors on chromatin	251
6.4.2. Small RNAs and transcriptional inhibition	257
6.5. Inhibition of transcriptional elongation	259
6.6. Conclusions	263
References	265
 7. REGULATION OF TRANSCRIPTION FACTOR SYNTHESIS	271
7.1. Transcription factor regulation	271
7.2. Regulated synthesis of transcription factors	271
7.2.1. The MyoD transcription factor	272
7.2.2. Homeobox transcription factors	281
7.3. Mechanisms regulating the synthesis of transcription factors	294
7.3.1. Regulation of transcription	294
7.3.2. Regulation of RNA splicing	297
7.3.3. Regulation of translation	304

7.4. Conclusions	307
References	308
8. REGULATION OF TRANSCRIPTION FACTOR ACTIVITY	312
8.1. Evidence for the regulated activity of transcription factors	312
8.2. Regulation by protein–ligand binding	314
8.2.1. Examples of regulation by ligand binding	314
8.2.2. The nuclear receptors	317
8.3. Regulation by protein–protein interactions	325
8.3.1. Inhibition of transcription factor activity by protein–protein interaction	325
8.3.2. Activation of transcription factors by protein–protein interaction	335
8.3.3. Alteration of transcription factor function by protein–protein interaction	335
8.4. Regulation by protein modification	337
8.4.1. Transcription factor modification	337
8.4.2. Phosphorylation	337
8.4.3. Acetylation	347
8.4.4. Methylation	348
8.4.5. Ubiquitination and sumoylation	350
8.5. Regulation by protein degradation and processing	358
8.6. Role of regulated activity	362
8.7. Conclusions	364
References	366
9. TRANSCRIPTION FACTORS AND HUMAN DISEASE	373
9.1. Diseases caused by transcription factor mutations	373
9.2. Cancer	380
9.3. Cellular oncogenes and cancer	382
9.3.1. Fos, Jun and AP1	382
9.3.2. <i>v-erbA</i> and the thyroid hormone receptor	388
9.3.3. The <i>myc</i> oncogene	392
9.3.4. Other oncogenic transcription factors	399
9.4. Anti-oncogenes and cancer	403
9.4.1. Nature of anti-oncogenes	403
9.4.2. p53	404
9.4.3. The Retinoblastoma protein	413
9.4.4. Other anti-oncogenic transcription factors	420

9.5. Transcription factors and treatment of human disease	425
9.6. Conclusions	435
References	437
10. CONCLUSIONS AND FUTURE PROSPECTS	449
