

CONTENTS

Preface	xiii
0.1 Software, Implementation and Website	xiv
0.2 Organization of this Book	xv
Acknowledgements	xvii
1 Conceptual and Philosophical Considerations in Ecology and Statistics	1
1.1 Science by Hierarchical Modeling	2
1.1.1 Example: Modeling Replicated Counts	3
1.2 Ecological Scales of Organization	7
1.3 Sampling Biological Systems	9
1.3.1 Detectability or Detection Bias	10
1.3.2 Spatial Sampling and Spatial Variation	11
1.4 Ecological Inference Paradigms	13
1.4.1 The Observation-driven View	14
1.4.2 The Process-Driven View	15
1.4.3 The Philosophical Middle Ground: The Hierarchical View	16
1.5 The Role of Probability and Statistics	18
1.5.1 Probability as the Basis for Modeling Ecological Processes	18
1.5.2 Probability as the Basis for Inference	18
1.6 Statistical Inference Paradigms: Bayesian and Frequentist.	19
1.6.1 Dueling Caricatures of Bayesianism	20
1.6.2 Our Bayesian Parody	21
1.7 Parametric Inference	22
1.7.1 Parametric Inference and The Nature of Assumptions	23
1.7.2 The Hierarchical Rube Goldberg Device	24
1.8 Summary	25
2 Essentials of Statistical Inference	27
2.1 Preliminaries	28
2.1.1 Statistical Concepts	28

2.1.2	Common Distributions and Notation	30
2.1.3	Probability Rules for Random Variables	32
2.2	The Role of Approximating Models	35
2.3	Classical (Frequentist) Inference	36
2.3.1	Maximum Likelihood Estimation	37
2.3.2	Properties of MLEs	43
2.4	Bayesian Inference	50
2.4.1	Bayes' Theorem and the Problem of 'Inverse Probability'	52
2.4.2	Pros and Cons of Bayesian Inference	54
2.4.3	Asymptotic Properties of the Posterior Distribution	55
2.4.4	Modern Methods of Bayesian Computation	57
2.5	Hypothesis Testing	62
2.5.1	Model Selection	62
2.5.2	Inverting Tests to Estimate Confidence Intervals	68
2.5.3	A Bayesian Approach to Model Selection	70
2.5.4	Assessment and Comparison of Models	74
2.6	Hierarchical Models	76
2.6.1	Modeling Observations and Processes	76
2.6.2	Versatility of Hierarchical Models	77
2.6.3	Hierarchical Models in Ecology	81
3	Modeling Occupancy and Occurrence Probability	83
3.1	Logistic Regression Models of Occurrence	85
3.1.1	Modeling Species Distribution: Swiss Breeding Birds	87
3.1.2	Observation Covariates	94
3.2	Bayesian Logistic Regression	95
3.2.1	Analysis by Markov Chain Monte Carlo	96
3.2.2	Logistic Regression in WinBUGS	98
3.3	Models of Occupancy Allowing for Imperfect Observation	99
3.3.1	Sampling Error for Binary Observations	99
3.3.2	Importance of Detection Bias	101
3.3.3	The Repeated Measures Design	102
3.3.4	The Closure Assumption and Temporal Scale	104
3.3.5	Power of the Survey Method	105
3.4	Hierarchical Formulation of a Model for Occupancy	106
3.4.1	Bayesian Analysis of Hierarchical Representation	107
3.4.2	Example: Analysis of the Willow Tit Data	107
3.4.3	Bayesian Model Selection: Calculation of Posterior Model Weights	109
3.5	Occupancy Model as a Zero-Inflated Binomial	111

3.6	Encounter history Formulation	112
3.6.1	Likelihood Analysis	114
3.6.2	Hierarchical Formulation	116
3.7	Finite-Sample Inference	117
3.7.1	Example using Swiss BBS	120
3.7.2	Likelihood Estimation	120
3.8	Other Topics	122
3.8.1	False-Positive Errors	123
3.8.2	Multi-State Occupancy Models	123
3.8.3	Spatial Models of Occupancy	124
3.9	Summary	124
4	Occupancy and Abundance	127
4.1	Abundance-induced Heterogeneity in Detection	129
4.1.1	Royle-Nichols Model Formulation	129
4.1.2	Derived Parameters: Occupancy and Flavors of p	131
4.1.3	Induced Heterogeneity	132
4.1.4	Analysis by Integrated Likelihood	133
4.1.5	Bird Point Counts	134
4.1.6	Application to Carnivore Survey Data	137
4.2	Prediction of Local Abundance	138
4.2.1	What is N ?	139
4.3	Modeling Covariate Effects	140
4.3.1	Analysis of the Swiss Willow Tit Data	142
4.4	Other Model Extensions	142
4.4.1	Non-binomial Detection	142
4.4.2	Alternative Abundance Models	144
4.4.3	Example: Analysis of the Catbird Data	146
4.5	Functional Independence between P and Abundance	147
4.5.1	Abundance and Occupancy under Independence of p and N	149
4.5.2	Choice of Link Functions	150
4.5.3	Assessing Functional Independence	151
4.6	The Variable Area Sampling Design	152
4.6.1	Illustration	152
4.7	Estimating Occupancy in the Absence of Replicate Samples	154
4.8	Summary	155
5	Inference in Closed Populations	159
5.1	Fun with Multinomial Distributions	161
5.1.1	Example	161

5.1.2	Shrinking and growing multinomials by conditioning and unconditioning.	163
5.2	Estimating the Size of a Closed Population	164
5.2.1	The Classic Design based on Replication.	166
5.2.2	Inference based on the Conditional Likelihood	168
5.3	Examples	169
5.3.1	Analysis of the Microtus Data	169
5.3.2	Horned lizard surveys	170
5.3.3	Tiger camera trapping data.	171
5.3.4	On Estimating Density.	172
5.4	An Encounter History Formulation	172
5.4.1	Model variations.	174
5.5	Other Multinomial Observation Models	175
5.5.1	Pooling Robustness of the Multinomial	175
5.5.2	Multiple Observer Sampling	176
5.5.3	Example: Aerial Waterfowl Survey	177
5.5.4	Removal Sampling.	179
5.5.5	Distance Sampling.	180
5.6	Data Augmentation	181
5.6.1	Heuristic development	181
5.6.2	Bayesian Motivation by Analysis of M_0	182
5.6.3	Implementation	183
5.6.4	Analysis of the Microtus Data	185
5.7	Summary	187
6	Models with Individual Effects	191
6.1	Individual Heterogeneity Models	192
6.1.1	Bias Induced by Heterogeneity	193
6.1.2	Model construction	194
6.2	Flavors of M_h	195
6.2.1	Example: Flat-tailed Horned Lizard Data	199
6.2.2	Estimating Tiger Abundance	200
6.3	Inference About Species Richness	201
6.3.1	Spatial Subsamples as Replicates	203
6.4	Bayesian Analysis of Heterogeneity Models using Data Augmentation	204
6.4.1	Example: Estimating Species Richness	205
6.4.2	Of Bugs in BUGS	206
6.5	Individual Covariate Models	209
6.5.1	Background	211
6.5.2	Model Formulation.	212
6.5.3	Bayesian Estimation by Data Augmentation	214

6.5.4 Example: <i>Microtus</i> Trapping Data	215
6.5.5 Example: Group Size in Waterfowl Surveys	218
6.6 Summary	221
7 Spatial Capture–Recapture Models	225
7.0.1 A Hierarchical Model for Temporary Emigration	227
7.1 Distance Sampling as an Individual Covariate Model	229
7.1.1 Technical Formulation	231
7.1.2 Classical Derivation	232
7.1.3 Distance Sampling Remarks	234
7.1.4 Bayesian Analysis of Distance Sampling by Data Augmentation	234
7.1.5 Example: Analysis of Burnham's Impala Data	235
7.1.6 Joint Distribution of the Augmented Data	236
7.2 Distance Sampling with Measurement Error	238
7.3 Estimating Density from Location-of-Capture Information	241
7.3.1 Model Formulation.	243
7.3.2 Bayesian Analysis by Data Augmentation	246
7.3.3 Analysis of Simulated Data.	247
7.3.4 Analysis of the Lizard Data.	249
7.3.5 Effective Sample Area	250
7.3.6 Remarks	252
7.4 Estimating Density from Trapping Arrays	253
7.4.1 Model Formulation.	255
7.4.2 Example	259
7.4.3 Analysis of the Model	260
7.4.4 Analysis of the Tiger Camera Trapping Data.	261
7.5 Summary	264
8 Metapopulation Models of Abundance	267
8.1 A Hierarchical View of the Population.	269
8.2 Modeling Counts, Abundance, and Detectability	270
8.2.1 Sampling Protocols and Observation Models	270
8.2.2 Modeling Abundance and Detection.	272
8.3 Estimating Model Parameters from Data	274
8.3.1 Binomial Mixture Models.	274
8.3.2 Multinomial Mixture Models	283
8.4 Summary	294
9 Occupancy Dynamics	297
9.0.1 Background	299

9.1	Occupancy State Model	300
9.1.1	Metapopulation Summaries	301
9.1.2	Bayesian Analysis	303
9.1.3	Swiss Bird Data: European Crossbill Dynamics	303
9.2	A Generalized Colonization Model: Modeling Invasive Spread	304
9.3	Imperfect Observation of the State Variable	305
9.3.1	Hierarchical Formulation	306
9.3.2	Swiss Bird Data: European Crossbill Dynamics	308
9.3.3	Likelihood Analysis of the Model	309
9.4	Auto-Logistic Representation	311
9.4.1	Covariate Models	313
9.5	Spatial Auto-logistic Models	314
9.5.1	The Auto-logistic Model	315
9.5.2	Imperfect Observation of the State Variable	318
9.6	Spatio-Temporal Dynamics	321
9.6.1	Model Formulation	322
9.7	Summary	323
10	Modeling Population Dynamics	325
10.1	Data Augmentation	326
10.1.1	Implementation	327
10.2	State-Space Parameterization of the Jolly-Seber Model	328
10.2.1	The Observation Model	329
10.3	Process Model Formulations	329
10.3.1	Jolly-Seber Model as a Restricted Occupancy Model	330
10.3.2	The Implied Recruitment Model	332
10.3.3	Parameter Identifiability	333
10.3.4	Bayesian Analysis of the Models	334
10.3.5	Abundance and Other Derived Parameters	334
10.3.6	Analysis of the European Dipper Data	336
10.3.7	Prior Distributions for Recruitment	336
10.4	Schwarz and Arnason's Formulation	337
10.4.1	Implementation	339
10.4.2	Analysis of the Dipper Data	340
10.5	Models with Individual Effects	341
10.6	Summary	342
11	Modeling Survival	347
11.1	Classical Formulation of the CJS Model	349
11.1.1	Parameter Identifiability	350

11.2 Modeling Nest Survival	350
11.2.1 Analysis of the Redstart Data	354
11.2.2 Hierarchical Formulation	355
11.3 Hierarchical Formulation of the CJS Model	357
11.3.1 Bayesian Analysis	358
11.3.2 Representation as a Constrained Jolly–Seber Model	359
11.4 Modeling Avian Survival from Mist-Net Data	361
11.4.1 CJS Model with Pre-determined Residents	361
11.4.2 Analysis of the Warbler Data	364
11.5 Modeling Spatial Variation in Survival	365
11.5.1 Analysis of the MAPS Data	368
11.6 Survival Models with Individual Effects	369
11.6.1 Model Formulation	370
11.6.2 Analysis of the European Dipper Data	372
11.6.3 Model Selection	373
11.6.4 Prior Sensitivity	375
11.7 Summary	376
12 Models of Community Composition and Dynamics	379
12.1 Models with Known Species Richness	380
12.1.1 Example: North American Breeding Bird Survey	383
12.2 Models with Unknown Species Richness	384
12.2.1 Modeling Augmented Data	387
12.2.2 Example: North American Breeding Bird Survey	387
12.3 Covariates of Occurrence and Detection	389
12.3.1 Modeling Avian Species in Switzerland	390
12.3.2 Estimates of Species Richness and Geographic Distribution	392
12.4 Dynamic Models	393
12.4.1 Temporal Covariate Models	396
12.4.2 Temporal Dependence Models	397
12.4.3 Hybrid Models	398
12.5 Summary	399
13 Looking Back and Ahead	401
13.1 The Hierarchical Modeling Philosophy	402
13.1.1 Unifying Themes	402
13.1.2 Bayesian Hierarchical Models	403
13.2 Application of Hierarchical Models	404
13.2.1 Occupancy Models	405
13.2.2 Metacommunity Models	406
13.2.3 Individual Effects and Spatial Capture–Recapture	407

13.2.4 Dynamic Models	408
13.3 Potential Developments	409
13.3.1 Occupancy/Abundance	409
13.3.2 Dynamic Models and Related Extensions	411
13.3.3 Spatial Capture-Recapture	412
13.3.4 Compound Distributions	412
13.3.5 Hierarchical Models for Complex Sampling Designs	413
13.4 No Such Thing as a Free Lunch	414
Bibliography	417
Index	439
