Molecular Mechanism of Liver Development and Regeneration

Naoki Tanimizu and Atsushi Miyajima

I. Introduction	1
II. Specification of the Liver	3
III. Growth of the Fetal Liver	5
IV. Hepatocyte Differentiation	12
V. Cholangiocyte Differentiation	17
VI. Liver Regeneration	23
VII. Liver Stem and Progenitor Cells	25
VIII. Concluding Remarks	31
References	33

Molecular Basis of Vertebrate Endoderm Development

Aaron M. Zorn and James M. Wells

I. Introduction	49
II. Vertebrate Endoderm Development	51
III. Conserved Molecular Mechanisms	92

IV. Translational Embryology: Making Endoderm from Stem Cells	95
V. Summary and Future Prospects	97
References	99

YidC as an Essential and Multifunctional Component in Membrane Protein Assembly

Dorothee Kiefer and Andreas Kuhn

I. Introduction	113
II. YidC Membrane Insertase	114
III. Functions of YidC	121
IV. Eukaryotic YidC Homologues	129
V. Conclusions	134
References	134

Mitotic Spindle Dynamics in *Drosophila*

Ingrid Brust-Mascher and Jonathan M. Scholey

I. Introduction	139
II. Mitosis in <i>Drosophila</i>	140
III. Molecular Mechanisms Underlying Mitosis	143
IV. Mitotic Spindle Assembly and Function in <i>Drosophila</i>	154
V. Concluding Remarks	166
References	167

Neurogenesis in the Fish Retina

Deborah L. Stenkamp

I. Introduction: The Fish Retina as a Model System for Retinal Neurogenesis	173
II. Neurogenesis in the Embryonic Fish Retina	177
III. Persistent Retinal Neurogenesis in the Fish Retina	198

IV. Injury-Induced Neurogenesis in the Fish Retina	205
V. Conclusions	214
References	215
Index	225
