1. Autoimmune Diabetes Mellitus—Much Progress, but Many Challenges

1

Hugh O. McDevitt and Emil R. Unanue

1. Models of Type 1 DM 2
2. The Histocompatibility Molecules of the Autoimmune Diabetic 3
3. The Diabetic Antigens and the Diabetogenic T Cells 3
4. The Genetics of Type 1 Diabetes 6
5. Development of New Therapies in the NOD Model Which Show Promise in Studies in Patients 7
6. Effects of Administration of Glutamic Acid Decarboxylase 65 (GAD 65) to Patients with Recent-Onset T1D 8
7. The Prospect for Trials to Prevent T1DM in Susceptible Human Populations 9
- References 10

2. CD3 Antibodies as Unique Tools to Restore Self-Tolerance in Established Autoimmunity: Their Mode of Action and Clinical Application in Type 1 Diabetes

13

Sylvaine You, Sophie Candon, Chantal Kuhn, Jean-François Bach, and Lucienne Chatenoud

1. Introduction 14
2. CD3 Antibodies as Promising Tolerance-Promoting Tools: The Proof of Concept in T1D 16
3. The Clinical Results in T1D: More than 25 Years of Effort 18
4. Why is The Effect of CD3-Antibody Based Therapy Antigen Specific and Long Lasting? 21
5. Building on the Present Clinical Experience to Improve CD3 Antibody Therapy in T1D 26
6. Conclusions 30
- References 30

3. GAD65 Autoimmunity—Clinical Studies	39
Raivo Uibo and Åke Lernmark	
1. Introduction	40
2. GAD65 Autoimmunity in T1D	48
3. Pathogenesis of GAD65 Autoimmunity	61
4. Preclinical GAD65 Studies	64
5. Phase I GAD65 Clinical Studies	64
6. Phase II GAD65 Clinical Studies	65
7. Ongoing and Future Clinical Studies	67
8. Concluding Remarks	68
Acknowledgments	68
References	68
 4. CD8+ T Cells in Type 1 Diabetes	 79
Sue Tsai, Afshin Shameli, and Pere Santamaria	
1. Introduction	80
2. MHC Class I and T1D	81
3. Autoreactive CD8+ T Cells in T1D	83
4. Antigens for Diabetogenic CD8+ T Cells in Humans	86
5. The Relative Contribution of the β -Cell-Specific CD8+ Response to T1D	95
6. Development and Activation of Diabetogenic CD8+ T Cells	96
7. Recruitment of Diabetogenic CD8+ T Cells to Islets	104
8. Mechanisms of β -Cell Cytotoxicity in T1D	105
9. Induction of Immunologic Tolerance in Diabetogenic CD8+ T Cells	108
10. Concluding Remarks	111
Acknowledgments	112
References	112
 5. Dysregulation of T Cell Peripheral Tolerance in Type 1 Diabetes	 125
R. Tisch and B. Wang	
1. Introduction	126
2. The Autoimmune Process of T1D	126
3. Dysregulation of Central T Cell Tolerance in T1D	128
4. Dysregulation of Peripheral T Cell Tolerance in T1D	130
5. Summary	140
Acknowledgments	141
References	141

6. Gene–Gene Interactions in the NOD Mouse Model of Type 1 Diabetes	151
William M. Ridgway, Laurence B. Peterson, John A. Todd, Dan B. Rainbow, Barry Healy, Oliver S. Burren, and Linda S. Wicker	
1. Type 1 Diabetes is a Multigenic Disease	152
2. Insights into a Multigenic Disease: The NOD Mouse	153
3. Defining the Function of Alleles Altering the Frequency of T1D	161
4. Functional Studies with NOD Congenic Mice: The Combination of Protective Alleles at <i>Idd3</i> and <i>Idd5</i> Prevent Diabetes and Insulinitis	162
5. Review of <i>Idd3</i>	163
6. Review of <i>Idd5</i>	165
7. Genetic Complexity of <i>Idd5</i> : Genetic Masking and the Discovery of <i>Idd5.3</i> and <i>Idd5.4</i>	167
8. Combining Protective Alleles at <i>Il2/Idd3</i> with those from the <i>Idd5</i> Subregions	168
9. Conclusion	169
Acknowledgements	170
References	170
 <i>Index</i>	 177
<i>Content of Recent Volumes</i>	181
