<i>Volumes in Series</i>	<i>xvii</i>

Section I. Chemical and Functional Probing of RNA Structure, Interactions, and Folding **1**

1. Nucleotide Analog Interference Mapping **3**

Ian T. Suydam and Scott A. Strobel

1. Introduction	4
2. Materials and Reagents	7
3. Methods	9
4. Properties of Analogs	19
5. Nucleotide Analog Interference Suppression	25
6. Conclusions	26
References	27

2. Hydroxyl-Radical Footprinting to Probe Equilibrium Changes in RNA Tertiary Structure **31**

Inna Shcherbakova and Somdeb Mitra

1. Introduction	32
2. Sample Preparation	34
3. Equilibrium $\cdot\text{OH}$ Footprinting Based on Peroxidative Fenton Chemistry	35
4. Equilibrium $\cdot\text{OH}$ Footprinting Based on Oxidative Fenton Chemistry	36
5. Cleavage Product Separation	38
6. Quantitation of the Changes in the Reactivity and Data Analysis	40
7. Conclusions	44
Acknowledgments	44
References	44

3. Rapid Quantification and Analysis of Kinetic •OH Radical Footprinting Data Using SAFA	47
Katrina Simmons, Joshua S. Martin, Inna Shcherbakova, and Alain Laederach	
1. Introduction	48
2. Using SAFA	50
3. Data Normalization	57
4. Data Visualization	61
5. Conclusion	64
Acknowledgment	64
References	65
4. High-Throughput SHAPE and Hydroxyl Radical Analysis of RNA Structure and Ribonucleoprotein Assembly	67
Jennifer L. McGinnis, Caia D. S. Duncan, and Kevin M. Weeks	
1. Introduction	68
2. Theory	70
3. Practice	73
4. Examples and Interpretation	78
5. Perspectives and Conclusion	86
Acknowledgments	86
References	87
5. Metal Ion-Based RNA Cleavage as a Structural Probe	91
Marcello Forconi and Daniel Herschlag	
1. Introduction	92
2. Mechanisms of Metal Ion-Based Cleavage of Nucleic Acids	92
3. Metal Ion-Based Cleavage of RNA as a Structural Probe	95
4. Protocols	98
Acknowledgment	103
References	103
6. 2'-Amino-Modified Ribonucleotides as Probes for Local Interactions Within RNA	107
James L. Hougland and Joseph A. Piccirilli	
1. Introduction	108
2. 2'-Amino-2'-Deoxynucleotide Synthesis and Incorporation	110
3. 2'-Amino-2'-Deoxynucleotides as Sites for Covalent Modification	111
4. General Strategy for Investigating 2'-Hydroxyl Interactions Using 2'-Deoxy and 2'-Aminonucleotides	112
5. Studies of RNA Catalysis Using 2'-Amino-2'-Deoxynucleotides	114
6. Using 2'-Aminonucleotides to Investigate RNA Structure and Function: Case Studies	116

7. Conclusions	121
Acknowledgments	121
References	122
7. RNA Crosslinking Methods	127
Michael E. Harris and Eric L. Christian	
1. Introduction	128
2. Synthesis of Modified RNA Crosslinking Substrates	129
3. Generation of Crosslinked RNAs	135
4. Mapping of Crosslinked Nucleotides	139
5. Assessing the Validity of Crosslinking Data	141
References	143
8. Chemical Probing of RNA and RNA/Protein Complexes	147
Zhili Xu and Gloria M. Culver	
1. Introduction	148
2. Materials	150
3. Handling of the Chemicals	151
4. Optimization of the Chemical Probing Reactions	152
5. Procedure of Chemical Probing	154
6. RNA Extraction	159
7. Normalization of the RNA Sample	160
8. Primer Extension Analysis	160
9. Data Evaluation	162
10. Summary	164
Acknowledgments	164
References	164
9. RNA Folding During Transcription: Protocols and Studies	167
Terrence N. Wong and Tao Pan	
1. Introduction	168
2. Protocol 1: Determination of Transcriptional Pause Sites	169
3. Protocol 2: Structural Mapping of Paused Complexes	172
4. Protocol 3: Cotranscriptional RNA Folding as Measured via Oligohybridization	174
5. Protocol 4: Cotranscriptional RNA Folding Measured via P RNA Catalytic Activity	175
6. Protocol 5: The Folding of Self-Cleaving RNAs During Transcription	179
7. Additional Methodologies	181
8. Cotranscriptional Folding Studies from our Laboratory	181
References	190

10. Catalytic Activity as a Probe of Native RNA Folding	195
Yaqi Wan, David Mitchell III, and Rick Russell	
1. Introduction	196
2. Preliminary Measurements of Catalytic Reaction	199
3. Following RNA Folding by Continuous Activity Assay	203
4. Following RNA Folding by Discontinuous Activity Assay	206
5. Other Applications of Catalytic Activity as a Probe of Folding	209
Acknowledgments	215
References	215
11. Probing RNA Structure Within Living Cells	219
Andreas Liebeg and Christina Waldsich	
1. Introduction	220
2. Experimental Procedure	221
3. Application	234
4. Limitations	235
5. Conclusion	236
Acknowledgments	236
References	236
12. Structural Analysis of RNA in Living Cells by <i>In Vivo</i> Synchrotron X-Ray Footprinting	239
Tadepalli Adilakshmi, Sarah F. C. Soper, and Sarah A. Woodson	
1. Introduction	240
2. Beamline Setup for <i>In Vivo</i> Footprinting	241
3. Preparation of Samples	242
4. Exposure of Cells to X-Ray Beam	244
5. Isolation of Total RNA from Irradiated Cells	247
6. Primer Extension	248
7. Analysis of X-Ray Footprinting Experiments	251
8. Results on <i>E. coli</i> RNAs	253
9. Future of Footprinting	255
Acknowledgments	255
References	255
13. Determination of Intracellular RNA Folding Rates Using Self-Cleaving RNAs	259
Peter Y. Watson and Martha J. Fedor	
1. Introduction	260
2. Using RNA Turnover Rates as a "Clock" for Measuring RNA Assembly Kinetics	262

3. Applications	280
Acknowledgments	285
References	285

Section II. Identifying Metal Ion Interactions in RNA **287**

14. Separation of RNA Phosphorothioate Oligonucleotides by HPLC **289**

John K. Frederiksen and Joseph A. Piccirilli

1. Introduction: Phosphorothioate Oligonucleotides and the Need for Separation	290
2. HPLC Separation of Phosphorothioate Diastereomers	294
3. Materials and Methods	298
4. Examples of Phosphorothioate Oligonucleotide Separations	299
Acknowledgments	307
References	307

15. Use of Phosphorothioates to Identify Sites of Metal-Ion Binding in RNA **311**

Marcello Forconi and Daniel Herschlag

1. Introduction	312
2. Use of Phosphorothioate-Containing Ribozymes to Identify Sites of Metal-Ion Binding	312
3. Protocols	322
Acknowledgments	330
References	331

16. EPR Methods to Study Specific Metal-Ion Binding Sites in RNA **335**

Laura Hunsicker-Wang, Matthew Vogt, and Victoria J. DeRose

1. Introduction	336
2. Room Temperature EPR Spectroscopy to Quantify Mn^{2+} Bound to RNA	341
3. Low-Temperature EPR Spectroscopy of Mn^{2+} Ions Bound to RNA	345
4. ENDOR Spectroscopy to Identify Metal Ligands	350
5. ESEEM Spectroscopy	357
6. Summary	361
Acknowledgments	364
References	364

Section III. RNA Thermodynamics	369
17. Optical Melting Measurements of Nucleic Acid Thermodynamics	371
Susan J. Schroeder and Douglas H. Turner	
1. Introduction	371
2. Instrumentation	372
3. Calibrations	373
4. Brief Theory of Optical Melting Experiments	375
5. Two-State Assumption	378
6. ΔC_p^0 Assumption	378
7. Experimental Design	378
8. Data Interpretation	382
9. Error Analysis	383
10. Summary	384
Acknowledgments	384
References	384
18. Analyzing RNA and DNA Folding Using Temperature Gradient Gel Electrophoresis (TGGE) with Application to <i>In Vitro</i> Selections	389
Durga M. Chadalavada and Philip C. Bevilacqua	
1. Introduction	390
2. Temperature Gradient Gel Electrophoresis	391
3. Experimental Design and Application of TGGE to RNA and DNA	399
Acknowledgment	406
References	406
19. Studying RNA-RNA and RNA-Protein Interactions by Isothermal Titration Calorimetry	409
Andrew L. Feig	
1. Introduction	410
2. Required Materials	411
3. Instrumentation	411
4. Sample Considerations and Preparation	412
5. Cleaning the Sample Cell and Titration Syringe	414
6. Collecting Titration Data	415
7. Data Processing and Analysis	418
8. Special Considerations	420
9. Conclusions	421
References	422
<i>Author Index</i>	423
<i>Subject Index</i>	431
