

CONTENTS

<i>Contributors</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>

1. The Bithorax Complex of <i>Drosophila</i>: An Exceptional <i>Hox</i> Cluster	1
Robert K. Maeda and François Karch	
1. Pseudoallelism and the History of the BX-C	2
2. The Ed Lewis Model	3
3. Molecular Genetics of the BX-C	6
4. Initiation and Maintenance Phases in BX-C Regulation	9
5. Initiators, Maintenance Elements, and Segment-Specific Enhancers	10
6. Organization of the <i>Cis</i> -Regulatory Regions into Chromosomal Domains	13
7. Chromatin Boundaries Flank the Parasegment-Specific Domains	16
8. Boundaries Versus Insulators and Long-Distance Interactions	17
9. Mixing the Old and the New	21
10. Colinearity in the BX-C	24
References	27
 2. Evolution of the <i>Hox</i> Gene Complex from an Evolutionary Ground State	 35
Walter J. Gehring, Urs Kloter, and Hiroshi Suga	
1. Introduction	36
2. The Lewis Model	37
3. The Developmental and Evolutionary Ground State	39
4. Mechanisms of Epistatic Hox-Hox Interactions	46
5. The Evolutionary Origin of the Hox Cluster	47
6. Duplication and Divergence as a General Evolutionary Principle	55
7. Conclusion	56
Acknowledgments	57
References	57

3. Hox Specificity: Unique Roles for Cofactors and Collaborators	63
Richard S. Mann, Katherine M. Lelli, and Rohit Joshi	
1. An Introduction to the Problem	64
2. Too Many Binding Sites, Not Enough Specificity	65
3. How Specific Do Hox Proteins Need to be?	67
4. Hox Cofactors	72
5. What Do <i>In Vivo</i> Hox-Binding Sites Look Like?	78
6. Insights into Hox Specificity from Structural Studies	82
7. Activity Regulation of Hox Proteins: The Role of Hox Collaborators	87
8. Insights into Hoxasome Function from <i>Cis</i> -Regulatory Element Architecture	89
9. Conclusions	91
Acknowledgments	91
References	91
4. Hox Genes and Segmentation of the Vertebrate Hindbrain	103
Stefan Tümpel, Leanne M. Wiedemann, and Robb Krumlauf	
1. Introduction	104
2. Hindbrain Segmentation	105
3. Expression of <i>Hox</i> Genes in the Hindbrain	111
4. <i>Hox</i> Gene Regulatory Networks in Hindbrain Segmentation	114
Acknowledgments	126
References	126
5. Hox Genes in Neural Patterning and Circuit Formation in the Mouse Hindbrain	139
Yuichi Narita and Filippo M. Rijli	
1. Introduction	140
2. Basic Anatomical Background and Cellular Mechanisms of Hindbrain Development	140
3. The Impact of Segmental Patterning on Sensory Nuclei Columnar Organization and Projection Patterns	142
4. Rostrocaudal Profiles and Sequential Phases of <i>Hox</i> Gene Expression: From Progenitor Patterning to Postmitotic Neuron Connectivity	144
5. <i>Hox</i> Gene Function: Lessons from Mouse Knockouts	148
Acknowledgments	160
References	160

6. Hox Networks and the Origins of Motor Neuron Diversity	169
Jeremy S. Dasen and Thomas M. Jessell	
1. Introduction	170
2. Spinal Motor Neuron Diversity	171
3. Hox Expression in Developing Motor Neurons	176
4. Hox Proteins Determine Motor Neuron Columnar Identity and Connectivity	179
5. Hox Transcriptional Networks and the Specification of Motor Pool Identities	182
6. Restriction and Refinement of Hox Activities During Motor Neuron Differentiation	188
7. Conclusions	194
References	195
 7. Establishment of Hox Vertebral Identities in the Embryonic Spine Precursors	 201
Tadahiro Iimura, Nicolas Denans, and Olivier Pourquié	
1. Introduction	202
2. Initial <i>Hox</i> Gene Activation in Paraxial Mesoderm Precursors in the Epiblast	204
3. Molecular Control of Temporal Colinearity	210
4. Converting Temporal into Spatial Colinearity	212
5. Posterior Prevalence is Required for the Establishment of Spatial Colinearity	213
6. Spatial Dissociation of Segmentation and <i>Hox</i> Gene Activation Programs	217
7. Definitive Positioning of <i>Hox</i> Gene Boundaries in the Somites	219
8. Positioning of <i>Hox</i> Gene Boundaries in the Forming Segments	223
9. Conclusion: Determination of the Axial Fate of Vertebral Precursors	225
Acknowledgments	226
References	226
 8. <i>Hox</i>, <i>Cdx</i>, and Anteroposterior Patterning in the Mouse Embryo	 235
Teddy Young and Jacqueline Deschamps	
1. The <i>Hox</i> and <i>Cdx</i> Gene Family	236
2. Similarities and Differences in the Two Expression Phases of <i>Hox</i> and <i>Cdx</i> Genes in the Mouse Embryo	238
3. <i>Hox</i> and <i>Cdx</i> Gene Expression and A-P Patterning	242
4. Conclusion	248

Acknowledgments	250
References	250
9. <i>Hox</i> Genes and Vertebrate Axial Pattern	257
Deneen M. Wellik	
1. Introduction	258
2. <i>Hox</i> Genes and the Axial Skeleton	259
3. <i>Hox</i> Function in Axial Patterning	263
4. Conclusions—The Nature of the Mammalian “ <i>Hox</i> Code”	270
References	273
<i>Index</i>	279
<i>Contents of Previous Volumes</i>	285
