

CONTENTS

<i>Contributors</i>	<i>xj</i>
<i>Preface</i>	<i>xv</i>
<i>Volumes in Series</i>	<i>xvii</i>
1. A Method in Enzymology for Measuring Hydrolytic Activities in Live Cell Environments	1
Beverly Z. Packard and Akira Komoriya	
1. Protease Substrate Design	2
2. Protease Specificity	5
3. Cell-Permeable Fluorogenic Probes	7
4. Conclusions	16
References	17
2. Heterogeneity of Fluorescence Determined by the Method of Area-Normalized Time-Resolved Emission Spectroscopy	21
N. Periasamy	
1. Introduction	22
2. TRES and TRANES Methods	24
3. TRES and TRANES Spectra of Simple Cases	25
4. Physical Significance of TRANES and Isoemissive Point	29
5. TRES and TRANES of Fluorophores in Microheterogeneous Media	30
6. Fluorescence in Microheterogeneous and Biological Media: Special Cases	32
Acknowledgment	33
References	33
3. Multiparametric Probing of Microenvironment with Solvatochromic Fluorescent Dyes	37
Andrey S. Klymchenko and Alexander P. Demchenko	
1. "Universal" and "Specific" Noncovalent Interactions	39
2. The Methodology of Multiparametric Approach with Application of 3-Hydroxyflavone Dyes	40
3. Correlations of Spectroscopic Data with Solvatochromic Variables	43

4. Algorithm for Multiparametric Probing Based on Parameters of Absorption and Dual Emission	47
5. Application of Multiparametric Probing	49
6. Limitations of the Multiparametric Approach	51
7. Concluding Remarks	55
References	56
4. Site-Selective Red-Edge Effects	59
Alexander P. Demchenko	
1. Introduction	60
2. Molecular Disorder and the Origin of Red-Edge Effects	61
3. The Principle of Photoselection	62
4. Ground-State Heterogeneity	65
5. The Magnitude of Red-Edge Excitation Fluorescence Shift and Its Connection with Dielectric Relaxations	67
6. Red-Edge Effect with High Resolution in Time	71
7. Red-Edge Effects in Excited-State Reactions	72
8. Fluorescent Probes for Optimal Observation of Red-Edge Effects	74
9. Peculiarities of the Red-Edge Effects of Indole and Tryptophan	75
10. Conclusions	76
References	77
5. Fluorescence Approaches to Quantifying Biomolecular Interactions	79
Catherine A. Royer and Suzanne F. Scarlata	
1. Introduction	80
2. Fluorescence Observables	80
3. Designing a Fluorescence Experiment	85
4. Conclusions	103
References	103
6. Forster Resonance Energy Transfer Measurements of Transmembrane Helix Dimerization Energetics	107
Mikhail Merzlyakov and Kalina Hristova	
1. Introduction	108
2. Challenges in Quantitative Measurements of Interactions Between TM Helices in Bilayers	108
3. Bilayer Platforms for Measuring TM Helix Interactions Using FRET	110
4. FRET Due to Random Colocalization of Donors and Acceptors (Proximity FRET)	114

5. FRET Efficiencies and Energetics of TM Helix Dimerization	115
6. Biological Insights from FRET Measurements	124
7. Conclusion	125
References	125
7. Application of Single-Molecule Spectroscopy in Studying Enzyme Kinetics and Mechanism	129
Jue Shi, Joseph Dertouzos, Ari Gafni, and Duncan Steel	
1. Introduction	130
2. Experimental Considerations	134
3. Sample Preparation	136
4. Instrumentation	138
5. Data Analysis of Single-Molecule Trajectories	141
6. Additional Considerations	151
7. Summary	154
References	155
8. Ultrafast Fluorescence Spectroscopy via Upconversion: Applications to Biophysics	159
Jianhua Xu and Jay R. Knutson	
1. Introduction	160
2. Basic Concepts	162
3. Upconversion Spectrophotofluorometer and Experimental Considerations	168
4. Ultrafast Photophysics of Single Tryptophan, Peptides, Proteins, and Nucleic Acids	171
5. Summary and Future Directions	179
References	179
9. Use of Fluorescence Resonance Energy Transfer (FRET) in Studying Protein-induced DNA Bending	185
Anatoly I. Dragan and Peter L. Privalov	
1. Introduction	186
2. Preparation of Labeled DNA Duplexes	187
3. Fluorescence Resonance Energy Transfer	189
4. FRET in Studying Large Protein-Induced DNA Bends	191
5. Dependence of the Protein-Induced DNA Bend on the Forces Involved in Binding	194
6. FRET in Studying Small Protein-Induced DNA Bends	194
7. Conclusions	198

Acknowledgment	198
References	199
10. Fluorescent Pteridine Probes for Nucleic Acid Analysis	201
Mary E. Hawkins	
1. Introduction	202
2. Pteridine Analog Characteristics	205
3. Procedures for Oligonucleotide Synthesis with Pteridine Analogs	208
4. Characterization of Pteridine-Containing Sequences	210
5. Applications	211
6. Summary	227
Acknowledgments	228
References	228
11. Single-Molecule Fluorescence Methods for the Analysis of RNA Folding and Ribonucleoprotein Assembly	233
Goran Pljevaljčić and David P. Millar	
1. Introduction	233
2. Labeling Methods	236
3. Single-Molecule Fluorescence Detection Methods	238
4. Diffusion Single-Pair FRET for RNA Based Systems	238
5. Total Internal Reflection Fluorescence (TIRF) for RNA Based Systems	240
6. Application 1: Folding of the Hairpin Ribozyme	243
7. Application 2: Assembly of the Rev-RRE Complex	247
Acknowledgments	249
References	249
12. Using Fluorophore-Labeled Oligonucleotides to Measure Affinities of Protein-DNA Interactions	253
Brian J. Anderson, Chris Larkin, Kip Guja, and Joel F. Schildbach	
1. Introduction	254
2. Definitions of Fluorescence Anisotropy and Intensity	254
3. Advantages of Fluorescence Measurements	256
4. Disadvantages of Fluorescence Measurements	257
5. Designing the Oligonucleotide	258
6. Designing the Experiment	266
7. Competition Assays for Determining Specificity	269
8. Conclusions	270
Acknowledgments	270
References	270

13. Identifying Small Pulsatile Signals within Noisy Data: A Fluorescence Application	273
Michael L. Johnson, Leon S. Farhy, Paula P. Veldhuis, and Joseph R. Lakowicz	
1. Introduction	274
2. Methods	274
3. Results	280
4. Discussion	284
Acknowledgments	286
References	286
 14. Determination of Zinc Using Carbonic Anhydrase-Based Fluorescence Biosensors	 287
Rebecca Bozym, Tamiika K. Hurst, Nissa Westerberg, Andrea Stoddard, Carol A. Fierke, Christopher J. Frederickson, and Richard B. Thompson	
1. Introduction	288
2. Principles of CA-Based Zinc Sensing	288
3. Transducing Zinc Binding as a Fluorescence Change	290
4. "Free" Versus Bound Zinc Ion: Speciation	295
5. Metal Ion Buffers	297
6. Kinetics	301
7. Applications: Ratiometric Determination of Free Zinc in Solution	302
8. Preparation of Apocarbonic Anhydrase	303
9. Intracellular Sensing with TAT Tag	304
10. Intracellular Sensing with an Expressible CA Sensor	305
References	307
 15. Instrumentation for Fluorescence-Based Fiber Optic Biosensors	 311
Richard B. Thompson, Hui-Hui Zeng, Daniel Ohnemus, Bryan McCranor, Michele Cramer, and James Moffett	
1. Introduction and Rationale for Fluorescence-Based Fiber Optic Sensors	312
2. Basic Principles of Fiber Optics for Fluorescence Sensors	313
3. Optics and Mechanics of Fluorescence-Based Fiber Optic Sensors	316
4. Mounting and Alignment of the Instrument	319
5. Standards for Ratiometric and Lifetime-Based Fiber Optic Fluorescence Sensors	323
6. Construction of Fiber Optic Probes	326
7. Zn^{2+} Probe	329
8. Cu^{2+} Probe	330
9. Use of Fiber Optic Probes for Discrete Samples	332

10. Operating Issues: Noise, Background, Thermal Drift, and Mode Hopping	333
11. Field and Shipboard Use	334
Acknowledgments	335
References	336
