

CONTENTS

<i>Contributors</i>	<i>xiii</i>
<i>Preface</i>	<i>xix</i>
<i>Volumes in Series</i>	<i>xxiii</i>

Section I. Overview Articles **1**

1. Approaches to Discovering Novel Antibacterial and Antifungal Agents **3**

Stefano Donadio, Paolo Monciardini, and Margherita Sosio

1. Introduction	4
2. Strains and Samples	7
3. Targets and Assays for Antibacterial and Antifungal Programs	13
4. Screening	16
5. Hit Follow-up	19
6. Databases, Operations, and Costs	23
7. Perspectives	25
Acknowledgment	25
References	25

2. From Microbial Products to Novel Drugs that Target a Multitude of Disease Indications **29**

Flavia Marinelli

1. Microbial Diversity and Biotechnological Products	30
2. Secondary Metabolites	30
3. Conclusions	53
Acknowledgments	54
References	54

3. Discovering Natural Products from Myxobacteria with Emphasis on Rare Producer Strains in Combination with Improved Analytical Methods	59
Ronald O. Garcia, Daniel Krug, and Rolf Müller	
1. Introduction	60
2. The Search for Novel Myxobacteria and Their Metabolites—Basic Considerations	63
3. Methods for Isolation, Purification, and Preservation of Novel Myxobacteria	71
4. Fermentation and Screening for Known and Novel Metabolites	78
Acknowledgment	88
References	88
4. Analyzing the Regulation of Antibiotic Production in Streptomycetes	93
Mervyn Bibb and Andrew Hesketh	
1. Introduction	94
2. The Regulation of Antibiotic Production in Streptomycetes	94
3. Identifying Regulatory Genes for Antibiotic Biosynthesis	97
4. Characterizing Regulatory Genes for Antibiotic Biosynthesis	104
Acknowledgments	113
References	113
5. Applying the Genetics of Secondary Metabolism in Model Actinomycetes to the Discovery of New Antibiotics	117
Gilles P. van Wezel, Nancy L. McKenzie, and Justin R. Nodwell	
1. Introduction	118
2. Actinomycetes as Antibiotic Factories	119
3. Effects of Culture Conditions and Metabolism	120
4. Molecular Genetic Factors that Regulate Antibiotic Production	125
5. Applications for New Antibiotic Screening Technologies	129
6. Future Prospects	133
Acknowledgments	134
References	134
6. Regulation of Antibiotic Production by Bacterial Hormones	143
Nai-Hua Hsiao, Marco Gottelt, and Eriko Takano	
1. Introduction	144
2. Rapid Small-Scale γ -Butyrolactone Purification	145
3. Antibiotic Bioassay	146

4. Kanamycin Bioassay	148
5. Identification of γ -Butyrolactone Receptors	150
6. Identification of the γ -Butyrolactone Receptor Targets	151
7. Gel Retardation Assay to Detect Target Sequences of the γ -Butyrolactone Receptors	152
8. Conclusions	156
Acknowledgments	156
References	156
 7. Cloning and Analysis of Natural Product Pathways	159
Bertolt Gust	
1. Introduction	160
2. Cloning and Identification of Biosynthetic Gene Clusters	161
3. Analysis of Natural Product Pathways by PCR-Targeted Gene Replacement	163
4. <i>In Vitro</i> Transposon Mutagenesis	170
5. Heterologous Expression of Biosynthetic Gene Clusters	173
6. Reassembling Entire Gene Clusters by "Stitching" Overlapping Cosmid Clones	174
7. Conclusions	177
Acknowledgments	177
References	177
 8. Methods for <i>In Silico</i> Prediction of Microbial Polyketide and Nonribosomal Peptide Biosynthetic Pathways from DNA Sequence Data	181
Brian O. Bachmann and Jacques Ravel	
1. Introduction	182
2. Converting Type I PKSs to Structural Elements	191
3. Converting NRPS Domain Strings to Structural Elements	205
4. Concluding Remarks	212
Acknowledgments	214
References	214
 9. Synthetic Probes for Polyketide and Nonribosomal Peptide Biosynthetic Enzymes	219
Jordan L. Meier and Michael D. Burkart	
1. Introduction	220
2. Synthetic Probes of PKS and NRPS Mechanism	221
3. Synthetic Probes of PKS and NRPS Structure	233

4. Synthetic Probes for Proteomic Identification of PKS and NRPS Enzymes	241
5. Conclusions	250
References	250
10. Using Phosphopantetheinyl Transferases for Enzyme Posttranslational Activation, Site Specific Protein Labeling and Identification of Natural Product Biosynthetic Gene Clusters from Bacterial Genomes	255
Murat Sunbul, Keya Zhang, and Jun Yin	
1. Introduction	256
2. Experimental Procedures	263
3. Conclusion	271
References	271
11. Sugar Biosynthesis and Modification	277
Felipe Lombó, Carlos Olano, José A. Salas, and Carmen Méndez	
1. Introduction	278
2. Deoxysugar Biosynthesis	279
3. Deoxysugar Transfer	283
4. Modification of the Glycosylation Pattern through Gene Inactivation	284
5. Modification of the Glycosylation Pattern through Heterologous Gene Expression	288
6. Modification of the Glycosylation Pattern through Combinatorial Biosynthesis	290
7. Gene Cassette Plasmids for Deoxysugar Biosynthesis	292
8. Generation of Glycosylated Compounds	299
9. Tailoring Modifications of the Attached Deoxysugars	301
10. Detection of Glycosylated Compounds	303
Acknowledgments	303
References	303
12. The Power of Glycosyltransferases to Generate Bioactive Natural Compounds	309
Johannes Härle and Andreas Bechthold	
1. Introduction	310
2. Application of GTs in Producing Unnatural Bioactive Molecules	322
References	328

Section II. Peptides	335
13. Nonribosomal Peptide Synthetases: Mechanistic and Structural Aspects of Essential Domains	337
M. A. Marahiel and L.-O. Essen	
1. Introduction	338
2. Mechanistic and Structural Aspects of Essential NRPS Domains	339
3. Structural Insights into an Entire Termination Module	347
References	349
14. Biosynthesis of Nonribosomal Peptide Precursors	353
Barrie Wilkinson and Jason Micklefield	
1. Introduction	354
2. Precursors from Amino Acid Metabolism	355
3. Fatty Acid Precursor Biosynthesis	360
4. Polyketide Precursors	364
5. Glycosyl Building Blocks	371
6. Conclusion	372
References	373
15. Plasmid-Borne Gene Cluster Assemblage and Heterologous Biosynthesis of Nonribosomal Peptides in <i>Escherichia coli</i>	379
Kenji Watanabe, Alex P. Praseuth, Mike B. Praseuth, and Kinya Hotta	
1. Introduction	380
2. Biosynthetic Pathway of Nonribosomal Peptides	382
3. Echinomycin Biosynthetic Pathway	383
4. Construction of A Multigene Assembly on Expression Vectors	387
5. Heterologous Gene Expression and NRP Biosynthesis in <i>E. coli</i>	390
6. Self-Resistance Mechanism	391
7. Stability of Transformants Carrying Multiple Very Large Plasmids	392
8. Engineering of Heterologous NRP Biosynthetic Pathways in <i>E. coli</i>	393
9. Conclusion	395
References	396
16. Enzymology of β-Lactam Compounds with Cephem Structure Produced by Actinomycete	401
Paloma Liras and Arnold L. Demain	
1. Introduction	402
2. Biosynthesis of Cephamycins: Enzymes and Genes	405
3. Early Steps Specific for Cephamycin Biosynthesis	405

4. Common Steps in Cephamycin-Producing Actinomycetes and Penicillin- or Cephalosporin-Producing Filamentous Fungi	409
5. Specific Steps for Tailoring the Cephem Nucleus in Actinomycetes	420
6. Regulation of Cephamycin C Production	422
Acknowledgments	423
References	423
17. Siderophore Biosynthesis: A Substrate Specificity Assay for Nonribosomal Peptide Synthetase-Independent Siderophore Synthetases Involving Trapping of Acyl-Adenylate Intermediates with Hydroxylamine	431
Nadia Kadi and Gregory L. Challis	
1. Introduction	432
2. NRPS-Dependent Pathways for Siderophore Biosynthesis	434
3. NRPS-Independent Pathway for Siderophore Biosynthesis	442
4. Hybrid NRPS/NIS Pathway for Petrobactin Biosynthesis	448
5. Hydroxamate-Formation Assay for NIS Synthetases	450
References	455
18. Molecular Genetic Approaches to Analyze Glycopeptide Biosynthesis	459
Wolfgang Wohlleben, Evi Stegmann, and Roderich D. Süssmuth	
1. Structural Classification of Glycopeptide Antibiotics	460
2. Methods for Analyzing Glycopeptide Biosynthesis	462
3. Investigation of Glycopeptide Biosynthetic Steps	466
4. Regulation, Self-Resistance, and Excretion	477
5. Linking Primary and Secondary Metabolism	478
6. Approaches for the Generation of New Glycopeptides	479
Acknowledgments	480
References	480
19. <i>In Vitro</i> Studies of Phenol Coupling Enzymes Involved in Vancomycin Biosynthesis	487
Dong Bo Li, Katharina Woithe, Nina Geib, Khaled Abou-Hadeed, Katja Zerbe, and John A. Robinson	
1. Introduction	488
2. Peptide Synthesis	491
3. Peptide Thioesters	499
4. <i>In Vitro</i> Assays with OxyB	502
5. Production and Purification of Enzymes	503
References	507

20. Biosynthesis and Genetic Engineering of Lipopeptides in <i>Streptomyces roseosporus</i>	511
Richard H. Baltz	
1. Introduction	512
2. Biosynthesis and Genetic Engineering of Daptomycin in <i>S. roseosporus</i>	514
3. Sources of Genes for Combinatorial Biosynthesis	523
4. Genetic Engineering of Novel Lipopeptides	524
5. Concluding Remarks	527
Acknowledgments	528
References	528
21. In Vitro Studies of Lantibiotic Biosynthesis	533
Bo Li, Lisa E. Cooper, and Wilfred A. van der Donk	
1. Introduction	534
2. Mining Microbial Genomes for Novel Lantibiotics	537
3. Expression and Purification of Lantibiotic Precursor Peptides (LanAs)	538
4. Expression, Purification, and Assay of LanM Enzymes	542
5. Expression, Purification, and Assays of LanC Cyclases	547
6. The Protease Domain of Class II Lantibiotic Transporters	552
7. Additional Posttranslational Modifications in Lantibiotics	553
References	554
22. Whole-Cell Generation of Lantibiotic Variants	559
Jesús Cortés, Antony N. Appleyard, and Michael J. Dawson	
1. Introduction	559
2. Variant Generation	561
3. Conclusions	571
References	571
23. Cyanobactin Ribosomally Synthesized Peptides—A Case of Deep Metagenome Mining	575
Eric W. Schmidt and Mohamed S. Donia	
1. Introduction	576
2. Some Remaining Questions	583
3. Obtaining <i>Prochloron</i> Cells and DNA	583
4. Chemical Analysis	586
5. Cyanobactin Gene Cloning and Identification	587
6. Heterologous Expression in <i>E. coli</i>	590

7. Deep Metagenome Mining	591
8. Enzymatic Analysis of Cyanobactin Biosynthesis	593
9. Applying Deep Metagenome Mining: Pathway Engineering	593
Acknowledgments	595
References	595
<i>Author Index</i>	597
<i>Subject Index</i>	627
