Section I. Polyketides **1**

1. Introduction to Polyketide Biosynthesis **3**

Kira J. Weissman

1. Introduction	3
Acknowledgment	13
References	13

2. Structural Enzymology of Polyketide Synthases **17**

Shiou-Chuan (Sheryl) Tsai and Brian Douglas Ames

1. Introduction	18
2. Fatty Acid Synthase	19
3. Different Types of PKS and a Summary of Structural Work	21
4. Structural Enzymology of Individual Domains	22
5. Summary and Future Prospects	39
Acknowledgments	40
References	40

3. Fungal Type I Polyketide Synthases **49**

Russell J. Cox and Thomas J. Simpson

1. Introduction	50
2. Partially Reducing PKSs: 6-MethylSalicylate Synthase	54
3. Nonreducing PKSs	57
4. Highly Reducing PKSs	66
5. NR/HR PKS Hybrid Systems: Zearalenone (ZAE1 and ZAE2)	72
6. Conclusions	74
References	74

4. Tandem Acyl Carrier Protein Domains in Polyunsaturated Fatty Acid Synthases	79
Hui Jiang, Scott R. Rajski, and Ben Shen	
1. Introduction	80
2. Methods	85
3. Conclusion	93
Acknowledgment	95
References	96
5. Iterative Type I Polyketide Synthases for Eneidyne Core Biosynthesis	97
Geoffrey P. Horsman, Steven G. Van Lanen, and Ben Shen	
1. Introduction	98
2. Methods	100
3. Conclusion	109
Acknowledgment	111
References	111
6. The DEBS Paradigm for Type I Modular Polyketide Synthases and Beyond	113
Leonard Katz	
1. Introduction	114
2. DEBS and the Concept of a Module	114
3. Beyond the DEBS Paradigm	119
4. Conclusion	136
References	136
7. Formation and Characterization of Acyl Carrier Protein-Linked Polyketide Synthase Extender Units	143
Yolande A. Chan and Michael G. Thomas	
1. Introduction	144
2. Overproduction and Purification of Recombinant Proteins	147
3. Formation and Characterization of Hydroxymalonyl-ACP and Aminomalonyl-ACP	151
References	161

8. Type I Polyketide Synthases That Require Discrete Acyltransferases	165
Yi-Qiang Cheng, Jane M. Coughlin, Si-Kyu Lim, and Ben Shen	
1. Introduction	166
2. Methods	174
3. Conclusion	182
Acknowledgment	183
References	183
9. The Enzymology of Polyether Biosynthesis	187
Tiangang Liu, David E. Cane, and Zixin Deng	
1. Introduction	188
2. Genetic Mining and Functional Analysis of Genes Specific to Polyether Biosynthetic Pathways	191
3. Premonensin, the Parent Unsaturated Monensin Polyketide	195
4. Epoxidases MonCI, NigCI, and NanO	198
5. Epoxide Hydrolases MonBI/BII, NigBI/BII, NanI, and Lsd19	199
6. NanE, a Polyether-Specific Thioesterase	201
7. Assay of Polyether Thioesterase Activity	206
8. Transcriptional Analysis of the Nanchangmycin Biosynthetic Pathway Genes	209
9. Conclusions	210
Acknowledgments	210
References	211
10. Enzymology of the Polyenes Pimaricin and Candicidin Biosynthesis	215
Juan F. Martín and Jesús F. Aparicio	
1. Introduction	216
2. Pimaricin as a Prototype of Small Polyenes: Discovery and Properties	217
3. Pimaricin Biosynthesis in <i>S. natalensis</i>	218
4. Regulation of Pimaricin Biosynthesis	224
5. Candicidin: A Prototype of "Aromatic" Polyenes	228
6. The Candicidin/FR-008 Gene Cluster	229
7. Biosynthesis of PABA: The <i>pabAB</i> and <i>pabC</i> Genes	230
8. The Polyketide Synthases	233
9. Monooxygenase Genes: Modifications of the Polyketide Chain	234
10. Transporter Genes	235
11. Genes Related to Mycosamine Biosynthesis	236
12. Regulatory Genes	236

13. Phosphate Represses Expression of the <i>pabAB</i> Gene	237
14. Future Perspectives	237
Acknowledgments	238
References	238
11. Genetic Analysis of Nystatin and Amphotericin Biosynthesis	243
Sergey Zotchev and Patrick Caffrey	
1. Introduction	244
2. Gene Inactivation and Replacement in the Nystatin Producer <i>Streptomyces noursei</i>	246
3. Gene Inactivation and Replacement in the Amphotericin Producer <i>Streptomyces nodosus</i>	249
4. Production, Purification, and Characterization of Novel Amphotericin- and Nystatin-Related Polyenes	254
5. Conclusion	256
Acknowledgment	256
References	256
12. Polyketide Versatility in the Biosynthesis of Complex Mycobacterial Cell Wall Lipids	259
Tarun Chopra and Rajesh S. Gokhale	
1. Introduction	260
2. Acetate and Propionate Feeding Studies	265
3. Genome Sequencing and Identification of Polyketide Synthases	266
4. Mycobacterial Polyketide Synthases	267
5. Techniques to Characterize PKS Enzymes	282
References	284
13. Genetic Engineering to Produce Polyketide Analogues	295
Christopher D. Reeves and Eduardo Rodriguez	
1. Introduction	296
2. AT Domain Replacement to Alter α -Carbon Substitution	300
3. Procedure for Engineering AT Replacements in the Chromosome	301
4. Engineering β -Carbon Processing	305
5. Engineering when only a Single Crossover Event is Possible	308
6. Heterologous Expression of Engineered PKS Genes	309
7. Chemobiosynthesis	311
8. Mutasynthesis	313
9. Gene Knockouts to Obtain Analogues	314
References	315

14. Design and Synthesis of Pathway Genes for Polyketide Biosynthesis	319
Salvador Peirú, Hugo Gramajo, and Hugo G. Menzella	
1. Introduction	320
2. Redesign of PKS Genes to Accommodate Unique Restriction Sites Flanking Individual Components and for Efficient Expression in <i>E. coli</i>	322
3. Validation of Synthetic PKS Gene Design	324
4. A Rapid Assay to Identify Productive Combinations of PKS Modules	327
5. Assembly of Larger Polyketide Synthases Using Information Gained with the Bimodular Assay	330
6. Design and Construction of Synthetic Operons for the Expression of Sugar Pathway Genes	332
References	335
15. Heterologous Production of Polyketides in Bacteria	339
Eduardo Rodriguez, Hugo G. Menzella, and Hugo Gramajo	
1. Introduction	340
2. General Considerations for the Heterologous Expression of Polyketide Pathways	341
3. <i>S. coelicolor</i> as a Model System for Heterologous Expression of Polyketides	344
4. Procedure for the Heterologous Production of Polyketides in <i>S. coelicolor</i>	347
5. System Improvements for the Heterologous Production of Polyketides in <i>Streptomyces</i> spp.	349
6. Recent Developments for the Production of Polyketides in Nonactinomycete Bacteria	357
References	360
16. In Vitro Analysis of Type II Polyketide Synthase	367
Wenjun Zhang and Yi Tang	
1. Introduction	368
2. Expression and Purification of Type II PKSs	371
3. In Vitro Activity Assays	376
Acknowledgments	389
References	390

17. Bacterial Fatty Acid Synthesis and its Relationships with Polyketide Synthetic Pathways	395
John E. Cronan and Jacob Thomas	
1. Introduction	396
2. Bacterial Fatty Acids	396
3. Acyl Carrier Protein, the Key Component of Bacterial Fatty Acid Synthesis	397
4. Overview of the Reactions of Fatty Acid Biosynthesis	400
5. The Initiation Steps of Fatty Acid Synthesis	402
6. The Enzymes of the Fatty Acid Elongation Cycle	404
7. Unsaturated Fatty Acid Synthesis in <i>E. coli</i>	407
8. The Abundant Exceptions to the <i>E. coli</i> Fatty Acid Synthesis Paradigm	410
9. Relationships between Fatty Acid Synthesis and Polyketide Synthesis	412
10. Methods for Study of Bacterial Fatty Acid Synthesis	415
References	426
 Section II. Aminocoumarins	 435
18. Aminocoumarins: Mutasynthesis, Chemoenzymatic Synthesis, and Metabolic Engineering	437
Lutz Heide	
1. Introduction	438
2. Generation of Integrative Cosmids and Heterologous Expression of Novobiocin, Clorobiocin, and Coumermycin A ₁ Gene Clusters	441
3. Generation of Single and or Multiple Deletions in the Integrative Cosmids	442
4. Mutasynthetic Generation of New Aminocoumarin Antibiotics	444
5. <i>In Vitro</i> Amide Synthetase Assays for the Identification of Suitable Ring A Analogues for Mutasynthesis	446
6. Use of Various Amide Synthetase Genes for Expanding Mutasynthesis Product Range	447
7. Generation of Substrates for Chemoenzymatic Synthesis	447
8. Chemoenzymatic Synthesis of New Clorobiocin Analogues	449
9. Generation of New Aminocoumarin Antibiotics by Metabolic Engineering	451
10. Conclusion	453
Acknowledgments	453
References	454

Section III. Carbohydrates 457**19. Enzymology of Aminoglycoside Biosynthesis—Deduction from Gene Clusters 459**

Udo F. Wehmeier and Wolfgang Piepersberg

1. Introduction 460
2. Some Key Enzymes in the Biosyntheses of Aminoglycoside Antibiotics 469
3. Acarbose and Related Metabolites 478
- References 487

20. Biosynthetic Enzymes for the Aminoglycosides Butirosin and Neomycin 493

Fumitaka Kudo and Tadashi Eguchi

1. Introduction 494
2. General Method to Investigate Functions of the Biosynthetic Enzymes for Aminoglycosides 499
3. Neamine Biosynthetic Enzymes (Enzymes 1~7, and 20) 500
4. Ribostamycin Biosynthetic Enzymes (Enzymes 8 and 9) 507
5. Neomycin Biosynthetic Enzymes (Enzymes 5~7, 10, and 11) (Addition of Neosamine B to Ribostamycin) 508
6. (S)-4-Amino-2-Hydroxybutyrate Biosynthetic Enzymes (Enzymes 12~19) (Addition of AHBA to Ribostamycin) 510
7. Other Related Enzymes in the Biosynthesis of 2DOS-Containing Aminoglycoside Antibiotics 515
8. Concluding Remarks and Future Perspectives 516
- References 516

21. Enzymatic Synthesis of TDP-Deoxysugars 521

Jessica White-Phillip, Christopher J. Thibodeaux, and Hung-wen Liu

1. Introduction 522
2. Enzymatic Synthesis of TDP- α -D-glucose 524
3. Generation of TDP-4-keto-6-deoxy- α -D-glucose (6) 529
4. *In Vitro* Reconstitution of Entire Deoxysugar Biosynthetic Pathways 533
5. Synthesis of Deoxysugars *In Vivo* by Metabolic Pathway Engineering 539
6. Summary 541
- Acknowledgment 542
- References 542
