1. Roles of F-BAR/PCH Proteins in the Regulation of Membrane Dynamics and Actin Reorganization	1
Pontus Aspenström	
1. Introduction	2
2. F-BAR Proteins	3
3. Yeast F-BAR Proteins	9
4. Vertebrate F-BAR Proteins	11
5. F-BAR Proteins in Health and Disease	19
6. Concluding Remarks	22
Acknowledgments	22
References	23
2. New Insights into the Roles of Dendritic Cells in Intestinal Immunity and Tolerance	33
Vuk Cerovic, Victoria McDonald, Mark A. Nassar, Susan M. Paulin, G. Gordon MacPherson and Simon W. F. Milling	
1. Introduction	34
2. Dendritic Cells	36
3. Intestinal Dendritic Cells	47
4. Dendritic Cells in Inflammatory Bowel Disease	58
5. Intestinal DCs and Pathogens	63
6. Concluding Remarks	79
References	80
3. Transcriptional Control of Gene Expression by Actin and Myosin	107
Emilie Louvet and Piergiorgio Percipalle	
1. Introduction	108
2. Actin and Myosin in Gene Expression Regulation	109
3. Roles of Actin in RNA Polymerase II-Mediated Transcription	113
4. Evidence for the Presence of Myosin in the Cell Nucleus	127
5. Interplay between Actin and Myosin in Transcription of rRNA Genes	130
6. Concluding Remarks	140

Acknowledgments	141
References	142
4. Roles of Eukaryotic Lsm Proteins in the Regulation of mRNA Function	149
Sundaresan Tharun	
1. Introduction	150
2. Lsm Proteins Function in Eukaryotic mRNA Decay	153
3. Lsm10 and Lsm11 Function in Histone mRNA 3'-processing	171
4. Sm-Domain Containing Protein Ataxin-2 is Implicated in Spinocerebellar Ataxia Type 2	174
5. Concluding Remarks and Future Directions	176
Acknowledgments	179
References	179
5. Spatiotemporal Dynamics of the ER-derived Peroxisomal Endomembrane System	191
Vladimir I. Titorenko and Richard A. Rachubinski	
1. Introduction	192
2. Sorting of Peroxisomal Membrane Proteins (PMPs) to and within the ER	193
3. Formation of Preperoxisomal Carriers from the ER	201
4. The Peroxisomal Endomembrane System	209
5. Proliferation of Peroxisomal Endomembranes	219
6. Coordination of the Biogenesis of the Peroxisomal Endomembrane System with the Biogenesis of other Organellar Compartments	230
7. Concluding Remarks	232
Acknowledgments	233
References	234
6. New Insights into Melanosome Transport in Vertebrate Pigment Cells	245
Sara Aspöngren, Daniel Hedberg, Helen Nilsson Sköld, and Margareta Wallin	
1. Introduction	246
2. Intracellular Transport Systems for Melanophores	253
3. Adaptor Proteins and Anchorage of Motor Proteins to Cargoes	259
4. Studying Receptors and Signal Pathways Involved in Color Change in Fish and Amphibians	261
5. Regulation of Molecular Motors and Switching between Tracks	267
6. Pigment Transfer	272

7. Pigment Cells	279
8. Concluding Remarks	284
Acknowledgments	286
References	286
7. Compartmentalizing the Neuronal Plasma Membrane: From Axon Initial Segments to Synapses	303
Zofia M. Lasiecka, Chan Choo Yap, Max Vakulenko, and Bettina Winckler	
1. Introduction	304
2. Cellular Mechanisms of Membrane Protein Compartmentalization	305
3. Creating and Maintaining Subdomains in the Neuronal Plasma Membrane	329
4. Conclusion	366
Acknowledgments	367
References	367
