

Contents

Contributors.....	ix
Preface.....	xi
Introduction.....	xv

Regulation of Metabolism by Nuclear Hormone Receptors 1

Huey-Jing Huang and Ira G. Schulman

I. Introduction.....	2
II. The PPARs.....	4
III. LXR.....	12
IV. FXR.....	19
V. ROR α	26
VI. ERR α	31
VII. Summary.....	37
References.....	37

Progesterone Receptor Action in Leiomyoma and Endometrial Cancer 53

J. Julie Kim, Elizabeth C. Sefton, and Serdar E. Bulun

I. Introduction.....	54
II. The Uterus.....	54
III. Progesterone Action on the Endometrium and Myometrium.....	56
IV. Endometrial Cancer.....	61
V. Progesterone Receptor Action in Endometrial Cancer.....	62
VI. Conclusions and Perspectives of Progesterone Action in Endometrial Cancer.....	66
VII. Uterine Leiomyoma.....	66
VIII. Progesterone Receptor Action in Leiomyoma.....	67
IX. Conclusions and Perspectives on Progesterone Action in Uterine Leiomyoma.....	73
X. Future Directions.....	74
References.....	74

Nuclear Xenobiotic Receptors: Integrating Gene Regulation to Physiological Functions 87

Jinhan He and Wen Xie

I. Introduction	88
II. Ligands for Nuclear Receptors	88
III. Nuclear Receptor Domain Structures	89
IV. Xenobiotic Receptor Functions and Their Implications in Physiology and Diseases, A Case Study	92
V. Pregnane X Receptor (PXR)	93
VI. Constitutive Androstane Receptor (CAR)	104
VII. Concluding Remarks	109
References	109

Emerging Roles of the Ubiquitin Proteasome System in Nuclear Hormone Receptor Signaling 117

David M. Lonard and Bert W. O'Malley

I. Introduction: Nuclear Hormone Receptors, Ubiquitin, and the Proteasome	118
II. The Ubiquitin Proteasome System	118
III. Nuclear Receptor Interactions with the Ubiquitin Proteasome System	120
IV. Coregulators and the UPS	123
V. Coregulators as UPS Targets	125
VI. Ubiquitin-Like Modifications in Nuclear Receptor Signaling	128
VII. Conclusion and Perspective	129
References	129

Biochemical Analyses of Nuclear Receptor-Dependent Transcription with Chromatin Templates 137

Donald D. Ruhl and W. Lee Kraus

I. Nuclear Receptors (NRs): Transcription Factors (TFs) with Separable Biochemical Activities	138
II. Biochemical Analyses of NR Activities, Interactions, and Functions: An Historical View	139
III. Role of Chromatin in NR-Dependent Transcription	143
IV. Biochemical Methods for the Analysis of NR-Dependent Transcription V. Biochemical Methods for the Assembly and Analysis of Chromatin	145
VI. What Have We Learned About NR-Dependent Transcription from <i>In Vitro</i> Chromatin Assembly and Transcription Studies?	149
	157

VII. Future Directions.....	174
VIII. Summary.....	178
References.....	178

Chromatin Remodeling and Nuclear Receptor Signaling 193

Manop Buranapramest and Debabrata Chakravarti

I. Introduction.....	194
II. NR Classification and Structure.....	194
III. NR Coregulators.....	197
IV. Chromatin as an NR Coregulator Substrate.....	201
V. ATP-Dependent Chromatin Remodelers in NR Gene Regulation.....	212
VI. Future Directions.....	222
References.....	225

Nuclear Receptor Repression: Regulatory Mechanisms and Physiological Implications 235

M. David Stewart and Jiemin Wong

I. Introduction.....	236
II. Corepressors.....	238
III. Types of NR Repression.....	241
IV. Molecular Mechanisms of Transcriptional Repression.....	244
V. Physiological Functions of NR-Mediated Repression.....	248
VI. Concluding Remarks.....	252
References.....	253

The Roles and Action Mechanisms of p160/SRC Coactivators and the ANCCA Coregulator in Cancer 261

Elaine Y.C. Hsia, June X. Zou, and Hong-Wu Chen

I. Introduction: The Discovery of AIB1/ACTR/SRC-3 as a Nuclear Hormone Receptor Coactivator and a Gene Amplified in Cancer.....	262
II. Aberrant Genetic Regulation of p160/SRC Expression in Cancers.....	264
III. The p160/SRCs Functions and Their Action Mechanisms in Cancer Cells.....	275
IV. Functions of p160/SRCs in Tumorigenesis Revealed in Animal Models.....	286

V. The Coregulator ANCCA, a Unique Target of AIB1/ACTR and a Potential Key Player in Cancer	288
VI. Concluding Remarks	290
References	291

Protein Arginine Methyltransferases: Nuclear Receptor Coregulators and Beyond 299

Peter Kuhn and Wei Xu

I. Introduction	300
II. Enzymatic Activity of PRMTs	301
III. PRMTs in Transcriptional Regulation	307
IV. PRMTs in Posttranscriptional Regulation	318
V. Structural Analysis of PRMTs	319
VI. Small Molecule Inhibitors for PRMTs	323
VII. Biological Functions of PRMTs	324
VIII. Concluding Remarks	332
References	332

Roles of Histone H3-Lysine 4 Methyltransferase Complexes in NR-Mediated Gene Transcription 343

Seunghye Lee, Robert G. Roeder, and Jae W. Lee

I. Introduction	344
II. Activating Signal Cointegrator-2 (ASC-2)	346
III. Set1-Like H3K4MT Complexes	351
IV. ASCOM in NR-Mediated Transactivation	354
V. Cross talk of ASCOMs with Other Coactivators	357
VI. Physiological Roles of Key Subunits of ASCOM	362
VII. Future Challenges	372
References	374
Index	383
