

Contents

Contributors ix

1 **MR Molecular Imaging of Tumor Vasculature and Vascular Targets** 1

Arvind P. Pathak, Marie-France Penet, and
Zaver M. Bhujwala

- I. Introduction 2
- II. Structural, Functional, and Molecular Characteristics of Tumor Vasculature 3
- III. Basis of Contrast in MR Images 7
- IV. Imaging Receptor Expression 16
- V. Imaging Vascular Targeting 17
- VI. Multimodal Molecular-Functional Imaging of Tumor Vasculature 19
- VII. Conclusion 21
- References 22

2 **An Integrated Approach for the Rational Design of Nanovectors for Biomedical Imaging and Therapy** 31

Biana Godin, Wouter H. P. Driessen, Bettina Proneth,
Sei-Young Lee, Srimeenakshi Srinivasan,
Rolando Rumbaut, Wadih Arap, Renata Pasqualini,
Mauro Ferrari, and Paolo Decuzzi

- I. Introduction 32
- II. Three Generations of Nanovectors 34
- III. Mathematical Models for Predicting the Nanovectors' Behavior 39
- IV. Biophysical Characterization of Nanovectors 48
- V. Vascular Targeting Moieties 50
- VI. *In vitro* Assays for Nanovectors' Characterization 53
- VII. Intravital Video Microscopy 55
- VIII. Conclusions 57
- References 59

3	Targeted Systemic Gene Therapy and Molecular Imaging of Cancer: Contribution of the Vascular-Targeted AAVP Vector	65
	Amin Hajitou	
	I. Introduction	66
	II. Targeted Gene Delivery	68
	III. Conclusions and Perspectives	79
	References	80
4	Cationic and Tissue-Specific Protein Transduction Domains: Identification, Characterization, and Therapeutic Application	83
	Maliha Zahid, Xiaoli Lu, Zhibao Mi, and Paul D. Robbins	
	I. Introduction	84
	II. Cationic Protein Transduction Domains	84
	III. Biopanning using Peptide Phage Display Libraries	85
	IV. Peptide Phage Display Biopanning in Cell Culture for Transduction Peptides	87
	V. Methods for Analysis of Transduction Efficiency	90
	VI. Peptide Phage Display Biopanning <i>in vivo</i> for Transduction Peptides	91
	VII. PTDs as Therapeutics	92
	VIII. Conclusions	93
	References	93
5	GRP78 Signaling Hub: A Receptor for Targeted Tumor Therapy	97
	Masanori Sato, Virginia J. Yao, Wadih Arap, and Renata Pasqualini	
	I. Introduction	99
	II. GRP78 Association with Activated $\alpha 2$ -Macroglobulin Promotes Cell Proliferation	101
	III. GRP78 Autoantibody Predicts Poor Prognosis in Tumors but Shows Therapeutic Effects in Rheumatoid Arthritis	102
	IV. GRP78 Promotes Endothelial Cell Survival in Association with T-Cadherin	103
	V. Cripto Mitogenic Signaling is GRP78-Dependent	103

VI. Interaction of GRP78 with Plasminogen Kringle 5 and Microplasminogen Leads to Apoptosis or the UPR	104
VII. GRP78 Association with Extracellular Par-4 Activates the Extrinsic Apoptotic Pathway	105
VIII. GRP78 Inhibits Tissue Factor-Mediated Procoagulant Activity	107
IX. GRP78 Targeting Peptides Inhibit Tumor Growth	108
X. Conclusions	109
References	110

6 On the Synergistic Effects of Ligand-Mediated and Phage-Intrinsic Properties During *In Vivo* Selection 115

Wouter H. P. Driessen, Lawrence F. Bronk, Julianna K. Edwards, Bettina Proneth, Glaucio R. Souza, Paolo Decuzzi, Renata Pasqualini, and Wadih Arap

I. Introduction	116
II. Ligand-Receptor Mediated Effects	118
III. Synergistic Effects Intrinsic to Phage	124
IV. Conclusion	130
References	130

7 Strategies for Targeting Tumors and Tumor Vasculature for Cancer Therapy 135

Prashanth Sreeramoju and Steven K. Libutti

I. Introduction	136
II. Isolated Limb Perfusion	136
III. Isolated Liver Perfusion	137
IV. Chemoembolization	138
V. Gene Therapy Strategies Available to Target the Tumor and the Tumor-Associated Vasculature	139
VI. Conclusions	148
References	148
