Contributors ix

- 1 Drosophila Models of Parkinson's Disease 1**
Alexander J. Whitworth
 - I. Introduction 2
 - II. Drosophila as a Model Organism 4
 - III. Dominant Traits 12
 - IV. Recessive Traits 22
 - V. Function of the PINK1/Parkin Pathway 29
 - VI. Convergent Therapeutic Approaches 35
 - VII. Conclusions 39
 - Acknowledgments 40
 - References 40

- 2 Cell Cycle Regulated Gene Expression in Yeasts 51**
Christopher J. McInerney
 - I. Introduction 52
 - II. Cell Cycle Gene Expression in Yeasts 55
 - III. Regulatory Networks 65
 - IV. Conservation of Controls 67
 - V. Importance of Cell Cycle Regulated Gene Expression 68
 - VI. Unimportance of Cell Cycle Regulated Gene Expression 70
 - VII. Related Areas of Interest and Topics for Further Study 71
 - References 75

- 3 RNA Editing by Mammalian ADARs 87**
Marion Hogg, Simona Paro, Liam P. Keegan, and Mary A. O'Connell
 - I. Introduction 88
 - II. Structure and Evolution of the CDA Domain 89
 - III. The ADAs That Act on RNA Family 90
 - IV. Testis-Expressed Nuclear RNA-Binding Protein 98

V. RNA Binding by ADARs	99
VI. Secondary Structures of RNA-Editing Substrates	101
VII. Transcripts Edited by ADARs	102
VIII. Searches for Mammalian Transcripts Edited by ADARs	103
IX. Consequences of Inosine in Transcripts	104
X. Inosine-Containing RNA Regulates Gene Expression <i>in trans</i>	106
XI. Editing and RNA Interference	106
XII. ADAR and Disease	108
XIII. ADAR2 Protects Against Neuronal Degeneration Following Ischemic Insult	109
XIV. ADAR2 as a "Neuronal Gatekeeper"	110
XV. ADAR and Alternative Splicing	110
XVI. Coordination of Editing and Alternative Splicing	112
XVII. Conclusion	113
Acknowledgments	113
References	113

4 **Cell Entry of Enveloped Viruses** 121

François-Loïc Cosset and Dimitri Lavillette

I. Introduction	122
II. Architecture and Structure of the Viral Fusion Machinery	125
III. How Viruses Subvert Different Cell Proteins for Entry?	148
IV. Basic and Translational Research Exploiting Entry Properties of Viruses	156
V. Conclusions	165
Acknowledgments	166
References	167

5 **Molecular Signaling: How Do Axons Die?** 185

Michael Coleman

I. Introduction	186
II. Axonal Transport and How to Block It	187
III. The Essentials of Axon Survival	194
IV. Take It or Leave It: What Axons Do Not Need to Survive	199
V. Protein Turnover Fast and Slow	200

VI. Axonal Protein Synthesis	201
VII. Anterograde Survival Signaling	202
VIII. Adhesion Molecules	204
IX. Life After (Cell) Death: The Wld ^S Phenotype	205
X. Summary: Axonal Transport and Axon Survival	
Signaling	206
Acknowledgments	206
References	206

6 Restless Genomes: Humans as a Model Organism for Understanding Host-Retrotransposable Element Dynamics 219

Dale J. Hedges and Victoria P. Belancio

I. Introduction	220
II. The Human Elements	224
III. Expression and Regulation	228
IV. Genomic Instability	240
V. Impact on Human Health	244
VI. Conclusions	250
Acknowledgments	252
References	252
