Contributors ix

- 1 **Genome Simulation: Approaches for Synthesizing
In Silico Datasets for Human Genomics** 1
Marylyn D. Ritchie and William S. Bush
 - I. Introduction 2
 - II. Genome Simulation Challenges 4
 - III. General Simulation Strategies 5
 - IV. A Forward-Time Simulation Example: genomeSIMLA 8
 - V. GenomeSIMLA: An Experimental Example 16
 - VI. Conclusions 20
 - References 21
- 2 **Logic Regression and its Extensions** 25
Holger Schwender and Ingo Ruczinski
 - I. Introduction 26
 - II. Logic Regression 29
 - III. Modifications and Extensions of Logic Regression 37
 - References 43
- 3 **Complex System Approaches to Genetic Analysis:
Bayesian Approaches** 47
Melanie A. Wilson, James W. Baurley, Duncan C. Thomas,
and David V. Conti
 - I. Introduction 48
 - II. Structure of Covariates 53
 - III. Estimation 55
 - IV. Model Uncertainty 61
 - V. Determining Noteworthiness 64
 - VI. Conclusions 66
 - References 68

4	Multigenic Modeling of Complex Disease by Random Forests	73
	Yan V. Sun	
	I. Introduction	74
	II. Random Forests	76
	III. Prediction	81
	IV. Variable Selection	83
	V. Interpretation of the Results	93
	VI. Conclusions	96
	References	97
5	Detecting, Characterizing, and Interpreting Nonlinear Gene–Gene Interactions Using Multifactor Dimensionality Reduction	101
	Jason H. Moore	
	I. Introduction	102
	II. Machine Learning Analysis of Gene–Gene Interactions Using MDR	105
	III. Filter Approaches to MDR	107
	IV. Wrapper Approaches to MDR	109
	V. Statistical Interpretation of MDR Models	110
	VI. Summary	112
	References	113
6	The Restricted Partition Method	117
	Robert Culverhouse	
	I. Why Look for Joint Genetic Effects?	118
	II. Key Concerns Addressed by the RPM	120
	III. Description of the RPM	127
	IV. Computational Issues	133
	V. Other Practical Issues	135
	VI. Summary	138
	References	138

7	Statistical Methods for Pathway Analysis of Genome-Wide Data for Association with Complex Genetic Traits	141
	Peter Holmans	
	I. Introduction	142
	II. What Is Pathway Analysis?	143
	III. Statistical Considerations When Analyzing GWAS Data	144
	IV. Statistical Methods for Pathway Analysis	145
	V. Publically Available Pathway Databases	158
	VI. Unresolved Analytical Issues and Scope for Further Research	165
	VII. Software Packages for Pathway Analysis of GWAS Data	172
	VIII. Conclusions	172
	References	174
8	Providing Context and Interpretability to Genetic Association Analysis Results Using the KGraph	181
	Reagan J. Kelly, Jennifer A. Smith, and Sharon L. R. Kardia	
	I. Introduction	182
	II. The Role of Correlation Structure in Interpreting Results	183
	III. Improving Interpretability by Including Context-Dependent Effects	184
	IV. Overview of the KGraph's Structure	184
	V. Creating and Exploring KGraphs	187
	VI. Exploring Genetic Architecture in Real-World Data Using a KGraph	187
	VII. Enhancements and Future Directions for the KGraph	191
	VIII. Conclusion	192
	References	192
	Index	195
