Section I. Preparative Methods for Biophysical Studies of RNA **1**

1. Large-Scale Native Preparation of *In Vitro* Transcribed RNA **3**

Amanda Y. Keel, Laura E. Easton, Peter J. Lukavsky, and Jeffrey S. Kieft

1. Introduction	4
2. Native Purification of RNA: Affinity Chromatography Method	5
3. Native Purification of RNA: Anion-Exchange Chromatography	14
Acknowledgments	24
References	24

2. Assembly of Complex RNAs by Splinted Ligation **27**

Benjamin M. Akiyama and Michael D. Stone

1. Introduction	28
2. General Considerations for Splinted RNA Ligation	29
3. Preparation of Unmodified RNA Ligation Precursor Molecules	31
4. Preparation of Modified (Dye Labeled) RNA Ligation Precursor Molecules	37
5. RNA Ligation Methods	40
6. Application: Single-Molecule FRET Measurements	44
Acknowledgments	45
References	45

3. Methods of Site-Specific Labeling of RNA with Fluorescent Dyes **47**

Sergey Solomatin and Daniel Herschlag

1. Introduction	48
2. Design of Labeled RNA Constructs	49
3. Dye Labeling of RNA Fragments	53
4. Notes on <i>In Vitro</i> Transcription with T7 RNA Polymerase	55

5. Assembly of Labeled RNA Constructs	56
6. Examples of Protocols	58
Acknowledgments	66
References	66
4. Fluorophore Labeling to Monitor tRNA Dynamics	69
Cuiping Liu, Thu Betteridge, and Ya-Ming Hou	
1. Introduction	70
2. Methodology	75
3. Fluorescent Labeling of D Residues in Native and Transcripts of tRNAs	75
4. Fluorescent Labeling of the CCA Sequence	82
5. Conclusions	89
Acknowledgments	90
References	90
5. Use of Deoxyribozymes in RNA Research	95
Scott K. Silverman and Dana A. Baum	
1. Introduction	96
2. Deoxyribozymes for RNA Cleavage	97
3. Deoxyribozymes for RNA Ligation: Synthesis of Linear RNA Products	101
4. Deoxyribozymes for RNA Ligation: Synthesis of Branched RNA Products	107
5. Deoxyribozyme-Catalyzed Labeling (DECAL) of RNA	110
Acknowledgments	114
References	114
6. Strategies in RNA Crystallography	119
Francis E. Reyes, Andrew D. Garst, and Robert T. Batey	
1. Introduction	120
2. RNA Selection and Initial Characterization	122
3. Construction of Library of RNAs for Crystallization Trials	124
4. Improving Crystal Quality Through Postcrystal Analysis	127
5. Phasing Methods	130
6. A Case Study in the Crystallization of Lysine Riboswitch Regulatory Element	132
7. Concluding Remarks	134
Acknowledgments	135
References	135

Section II. Biophysical Methods for RNA Conformational and Dynamics Studies	141
7. Comparative Gel Electrophoresis Analysis of Helical Junctions in RNA	143
David M. J. Lilley	
1. Principle and Theory of Electrophoresis of Bent or Kinked Nucleic Acids	144
2. Discrete Bending or Kinking of the Axis of a Duplex	145
3. The Analysis of Helical Junctions Using the Long-Short Arm Method	146
4. Experimental Strategies and Methods	147
5. Kink Turns in RNA	149
6. Four-Way RNA Junctions	149
7. Three-Way RNA Junctions	152
8. Complexes of Branched RNA with Proteins	155
Acknowledgments	155
References	155
8. The Structure and Folding of Branched RNA Analyzed by Fluorescence Resonance Energy Transfer	159
David M. J. Lilley	
1. Theory of FRET	162
2. The Possible Effects of Fluorophore Orientation	163
3. Choice of Fluorophores	167
4. Construction of Fluorophore-Labeled RNA Species	170
5. Steady-State Measurements of FRET	171
6. Time-Resolved Measurements of FRET	176
7. Single-Molecule FRET	179
Acknowledgments	182
References	182
9. Analysis of RNA Folding by Native Polyacrylamide Gel Electrophoresis	189
Sarah A. Woodson and Eda Koculi	
1. Introduction	190
2. Theory of Gel Electrophoresis	191
3. Electrophoresis Equipment	194
4. Stability of Folded RNA Measured by Native PAGE	196
5. RNA Folding Kinetics	199
6. RNA Compactness and Native PAGE Mobility	200
7. Probing the Function of Conformers Resolved by Native PAGE	201

8. Controls and Further Considerations	204
9. Summary	205
Acknowledgments	205
References	205
10. Using Analytical Ultracentrifugation (AUC) to Measure Global Conformational Changes Accompanying Equilibrium Tertiary Folding of RNA Molecules	209
Somdeb Mitra	
1. Introduction	210
2. Theoretical Background	211
3. Materials and Instrumentation	216
4. Performing an RNA Folding Experiment	218
5. Data Analysis	224
6. Case Studies	230
7. Conclusions	232
Acknowledgments	233
References	233
11. Use of Small Angle X-ray Scattering (SAXS) to Characterize Conformational States of Functional RNAs	237
Sebastian Doniach and Jan Lipfert	
1. Small Angle X-ray Scattering (SAXS) as a Tool for Global Structure Determination at Low Resolution	238
2. SAXS and Conformational Changes in Small Functional RNAs	238
3. SAXS Data Acquisition and Effects of Radiation Damage	239
4. SAXS Data Analysis	239
5. Low-Resolution Atomic Scale Models of RNA: Fitting Secondary Structure RNA Models to Three-Dimensional Shape Models	243
6. Determining the Thermodynamics of RNA Folding Using Bead Models	245
7. Concluding Remarks	248
Acknowledgments	249
References	249
12. Time-Resolved X-ray Scattering and RNA Folding	253
Lois Pollack and Sebastian Doniach	
1. Introduction	254
2. SAXS Studies of RNA	254
3. Data Acquisition	255
4. Time-Resolved SAXS Methods	256
5. Mixer Fabrication	259

6. Data Analysis of SAXS Measurements	262
7. Concluding Remarks	266
Acknowledgments	266
References	267
13. 2-Aminopurine as a Probe of RNA Conformational Transitions	269
Kathleen B. Hall	
1. Introduction	269
2. 2AP Structure and Photophysics	270
3. RNA Oligonucleotides with 2AP	273
4. Steady-State Fluorescence and RNA Folding	273
5. Time-Resolved Fluorescence Intensity Decay	278
Acknowledgments	284
References	284
14. Fluorescence Polarization Anisotropy to Measure RNA Dynamics	287
Xuesong Shi and Daniel Herschlag	
1. Introduction	288
2. General Information of FPA Measurement	289
3. Choice of FPA Probes	291
4. Measuring FPA in a Simple Duplex, using an 11mer Control RNA Duplex as an Example	292
5. Use of FPA to Study Helical Dynamics of RNA, with a Junction Model Construct as an Example	294
6. Use of FPA to Study Helical Dynamics in a Complex RNA, with the <i>Tetrahymena</i> Group I Intron Ribozyme as an Example	299
7. Salt Dependence and Normalization of FPA with a Short Control Duplex	301
Acknowledgments	301
References	301
15. Studying RNA Using Site-Directed Spin-Labeling and Continuous-Wave Electron Paramagnetic Resonance Spectroscopy	303
Xiaojun Zhang, Pavol Cekan, Snorri Th. Sigurdsson, and Peter Z. Qin	
1. Site-Directed Spin-Labeling	304
2. Acquisition and Processing of cw-EPR Spectrum	308
3. Spectral Analysis	318
4. Examples of Application	320
Acknowledgments	326
References	326

16. Mapping Global Folds of Oligonucleotides by Pulsed Electron-Electron Double Resonance	329
Olav Schiemann	
1. Introduction	330
2. Overview	332
3. The Experiment	335
4. Structure Generation	339
5. Beyond Distances	340
6. Comparison with Other Methods	346
Acknowledgments	347
References	347
17. Laser-Induced Temperature Jump Infrared Measurements of RNA Folding	353
R. Brian Dyer and Eric B. Brauns	
1. Introduction	354
2. Infrared Spectral Properties of RNA	356
3. Experimental Methods	361
4. Examples	366
5. Conclusions	371
References	371
Section III. Electrostatics, and the Ion Atmosphere	373
18. Probing Nucleic Acid-Ion Interactions with Buffer Exchange-Atomic Emission Spectroscopy	375
Max Greenfeld and Daniel Herschlag	
1. Introduction	375
2. Description of BE-AES	377
3. Buffer Equilibration	379
4. ICP-AES	382
5. Measuring Anions	383
6. Example Protocol	384
Acknowledgments	388
References	388
19. Using Anomalous Small Angle X-Ray Scattering to Probe the Ion Atmosphere Around Nucleic Acids	391
Suzette A. Pabit, Kenneth D. Finkelstein, and Lois Pollack	
1. Introduction	392
2. Background: SAXS and ASAXS	393

3. Experimental Setup: Samples	398
4. Experimental Setup: Beamline	398
5. Data Acquisition	400
6. Results and Data Analysis	403
7. Conclusion	407
Acknowledgments	409
References	409
20. Simulations of RNA Interactions with Monovalent Ions	411
Alan A. Chen, Marcelo Marucho, Nathan A. Baker, and Rohit V. Pappu	
1. Introduction	412
2. Finite Size Artifacts in All-Atom Simulations of Ion–Nucleic Acid Interactions	414
3. On the Use of “Neutralizing Counterions Only” in All-Atom Simulations	421
4. Results from Simulations of Canonical A-Form RNA and B-Form DNA Helices	421
5. Comparison with Predictions of the Nonlinear Poisson–Boltzmann Equation	426
Acknowledgment	430
References	430
21. Ion–RNA Interactions: Thermodynamic Analysis of the Effects of Mono- and Divalent Ions on RNA Conformational Equilibria	433
Desirae Leipply, Dominic Lambert, and David E. Draper	
1. Introduction	434
2. Thermodynamic Descriptions of Ion–RNA Interactions	435
3. Analysis of Experimental Salt Dependence Data	444
Acknowledgment	461
References	461
22. Predicting Electrostatic Forces in RNA Folding	465
Zhi-Jie Tan and Shi-Jie Chen	
1. Introduction	466
2. Overview of Experimental Results for the Ion-Dependence of RNA Thermal Stability	467
3. Overview of Theoretical Methods for Predicting Ion Electrostatics for RNA Folding	471
4. Tightly Bound Ion Model	474

5. Enhancing the Computational Efficiency for the Numerical Calculations of the TBI Model	477
6. Applications of the TBI Model	478
7. Summary	482
Acknowledgments	484
References	484
