Section I. Glycomics Revealed by Mass Spectrometric Analysis 1

1. Mass Spectrometric Analysis of Sulfated *N*- and *O*-Glycans 3

Kay-Hooi Khoo and Shin-Yi Yu

1. Introduction and Overview	4
2. Sample Preparation	7
3. MS Analyses and Data Interpretation	13
4. Future Perspectives	23
Acknowledgments	24
References	24

2. Mass Spectrometric Analysis of Mutant Mice 27

Simon J. North, Jihye Jang-Lee, Rebecca Harrison, K vin Canis,
Mohd Nazri Ismail, Alana Trollope, Aristotelis Antonopoulos,
Poh-Choo Pang, Paola Grassi, Sara Al-Chalabi, A. Tony Etienne,
Anne Dell, and Stuart M. Haslam

1. Overview	28
2. Methods	31
3. Interpretation of Glycomic Data	59
4. Example Project: Characterization of Pancreatic Tissue from Wild-Type and <i>Mgat4a</i> Knockout Mice	62
5. Summary of Glycan Structural Observations in Murine Tissues, Cells, and Knockouts	69
Acknowledgments	73
References	74

3. Glycosaminoglycan Characterization by Electrospray Ionization Mass Spectrometry Including Fourier Transform Mass Spectrometry	79
Tatiana N. Laremore, Franklin E. Leach III, Kemal Solakyildirim, I. Jonathan Amster, and Robert J. Linhardt	
1. Overview	81
2. Preparation of Crude PG/GAG	83
3. Disaccharide Profiling Using Ion-Pairing Reverse-Phase (IP RP) HPLC with MS Detection	84
4. CS/DS Disaccharide Preparation	84
5. ESI IP RP LC MS Analysis of CS/DS Disaccharides	85
6. HS Disaccharide Preparation	88
7. ESI IP RP LC MS Analysis of HS Disaccharides	90
8. Direct Infusion ESI FTMS Analysis of Oligosaccharides and Polysaccharides Separated by Preparative Continuous-Elution PAGE	92
9. Preparation of Bikunin GAG	93
10. An Approach to FTMS Data Interpretation	100
11. Direct Infusion ESI FT-ICR MS Analysis of Bikunin GAG Mixture	101
12. Structural Characterization of GAG Oligosaccharides by Tandem Mass Spectrometry	102
13. Summary	105
Acknowledgments	106
References	106
4. Large-Scale Glycomics for Discovering Cancer-Associated N-Glycans by Integrating Glycoblotting and Mass Spectrometry	109
Maho Amano and Shin-Ichiro Nishimura	
1. Introduction	110
2. Overview of Glycoblotting Utilized by BlotGlyco Beads	111
References	124
5. <i>In Vitro</i> and <i>In Vivo</i> Enzymatic Syntheses and Mass Spectrometric Database for N-Glycans and O-Glycans	127
Hiromi Ito, Yasunori Chiba, Akihiko Kameyama, Takashi Sato, and Hisashi Narimatsu	
1. Overview	128
2. <i>In Vitro</i> Syntheses of N- and O-Linked Glycan Libraries Using Recombinant Human Glycosyltransferases	129
3. <i>In Vivo</i> Production of Mammalian-Type O-Linked Glycopeptides in Yeast	136
4. An Application of the Library to Glycan Analysis	141

5. Glycan Analysis Using the Glycan Mass Spectral Database "GMDB"	143
6. Navigator System for Glycan Analysis Using the Glycan Mass Spectral Database	146
Acknowledgment	148
References	148

Section II. Glycomics Revealed by Carbohydrate-Binding Proteins 151

6. Identification of Fucosylated Haptoglobin as a Novel Tumor Marker for Pancreatic Cancer and Its Possible Application for a Clinical Diagnostic Test	153
Eiji Miyoshi, Shinichiro Shinzaki, Kenta Moriwaki, and Hitoshi Matsumoto	
1. Introduction	154
2. Discovery of Fucosylated Haptoglobin as a Marker for Pancreatic Cancer	155
3. Mass Spectrometry Analysis of the Oligosaccharide Structure on Haptoglobin	156
4. Identification of an Inducible Factor that Stimulates the Production of Haptoglobin	157
5. Clinical Application of Lectin-Antibody ELISA to Measure Fucosylated Haptoglobin	160
6. Closing Remarks	162
Acknowledgments	162
References	163
7. Differential Glycan Profiling by Lectin Microarray Targeting Tissue Specimens	165
Atsushi Kuno, Atsushi Matsuda, Yuzuru Ikehara, Hisashi Narimatsu, and Jun Hirabayashi	
1. Overview	166
2. Differential Analysis of Glycoproteins Derived from One-Dot Sections of Tissue Microarray	168
3. Differential Glycan Analysis Between Cancer Lesions and Normal Regions in the Same Tissue Section	174
4. (Optional) Glycan Profiling of a Target Glycoprotein Extracted from Tissue Specimens	176
Acknowledgments	177
References	177

8. A Versatile Technology for Cellular Glycomics Using Lectin Microarray **181**

Hiroaki Tateno, Atsushi Kuno, Yoko Itakura, and Jun Hirabayashi

1. Introduction	182
2. Strategy for Systematic Development of Cell Discrimination Procedures Using Lectin Microarray	182
3. Production of the Lectin Microarray	183
4. Sample Preparation and Lectin Microarray Hybridization	185
5. Data Normalization	185
6. Glycan Profiles of CHO, Lec2, Lec8, and Lec1	186
7. Unsupervised Clustering and Principal Component Analysis	189
8. Significance Difference Test	190
9. Discriminant Analysis	191
10. Differential Analysis Between CHO and Lec1	192
11. Validation	193
12. Concluding Remarks	193
Acknowledgments	195
References	195

9. Applications of Heparin and Heparan Sulfate Microarrays **197**

Jian Yin and Peter H. Seeberger

1. Introduction	198
2. Preparation of Amino-Functionalized HS/Heparin Oligosaccharides	201
3. Microarray Analysis of HS/Heparin-FGF Binding	202
4. A HS/Heparin Microarray to Determine the Binding Profiles of Heparin Dendrimers to FGF-2	207
5. HS/Heparin Interaction with Chemokines as Determined by Microarray Analysis	211
6. HS/Heparin Microarray for Determination of Their Interaction with NCRs	213
7. Conclusions	214
Acknowledgments	215
References	215

10. Measurement of Glycan-Based Interactions by Frontal Affinity Chromatography and Surface Plasmon Resonance **219**

Chihiro Sato, Nao Yamakawa, and Ken Kitajima

1. Introduction	220
2. Frontal Affinity Chromatography (FAC) as a Tool for the Measurement of Glycan-Based Interactions	221

3. Surface Plasmon Resonance (SPR)-Based Biosensors as a Tool for the Measurement of Glycan-Based Interactions	227
4. Conclusions	230
Acknowledgments	231
References	231
11. Detection of Weak-Binding Sugar Activity Using Membrane-Based Carbohydrates	233
Kazuo Yamamoto and Norihito Kawasaki	
1. Introduction	234
2. Construction of Plasmids for Biotinylated Soluble Lectins	234
3. Preparation of Biotinylated Soluble Lectins and PE-Labeled Lectin Tetramer	236
4. Construction of Plasmids for the Fc-Fusion Protein and Purification of the Lectin-Fc Fusion Protein	237
5. Binding Assay for PE-Labeled Lectin Tetramer Using Flow Cytometry	238
6. Cells with Altered Glycans or Modification of Cell-Surface Glycans	239
References	240
12. Fluorescence-Based Solid-Phase Assays to Study Glycan-Binding Protein Interactions with Glycoconjugates	241
Anne Leppänen and Richard D. Cummings	
1. Overview	242
2. Biotinylation of Glycopeptides, Oligosaccharides, and Cells	244
3. Fluorescence Labeling of GBPs and Cells	247
4. P- and L-Selectin Binding to Immobilized Glycosulfopeptides and Determination of Apparent Binding Affinity	249
5. Galectin-1 Binding to Immobilized Glycopeptides and Glycans and Determination of Apparent Binding Affinity	254
6. Galectin-1 Binding to Immobilized HL-60 Cells and Determination of Apparent Binding Affinity	257
Acknowledgments	262
References	262
13. Multifaceted Approaches Including Neoglycolipid Oligosaccharide Microarrays to Ligand Discovery for Malectin	265
Angelina S. Palma, Yan Liu, Claudia Muhle-Goll, Terry D. Butters, Yibing Zhang, Robert Childs, Wengang Chai, and Ten Feizi	
1. Overview	266
2. Preparation of Recombinant Soluble Human Malectin	268
3. Preparation of Glucan Oligosaccharides	271

4. Preparation of Glucosylated High-Mannose <i>N</i> -Glycans	274
5. Preparation of NGL Probes	278
6. Carbohydrate Microarray Analysis of Human Malectin	281
7. Conclusions	284
Acknowledgments	284
References	284
14. Imaging Mass Spectrometry of Glycolipids	287
Naoko Goto-Inoue, Takahiro Hayasaka, and Mitsutoshi Setou	
1. Overview	288
2. Preparation of Tissue Sections	289
3. Matrix Selection and Applying Matrix	290
4. Measurements by Imaging Mass Spectrometry	292
5. Data Analyses	293
6. Identification of Molecules	294
7. Application of IMS	296
Acknowledgments	299
References	299
Section III. Chemical Glycobiology	303
15. Dynamics and Interactions of Glycoconjugates Probed by Stable-Isotope-Assisted NMR Spectroscopy	305
Yoshiki Yamaguchi and Koichi Kato	
1. Introduction	306
2. Assignments of NMR Signals Derived from Glycoprotein Glycan	306
3. Dynamics of Glycoprotein Glycans	309
4. Identification of Binding Surfaces in Glycoprotein/Ligand Complexes	313
5. NMR-Based Screening of Glycopeptides Reactive with Lectin	315
6. NOE Analyses of Lectin-Ligand Interactions	318
7. Perspective	318
Acknowledgments	319
References	319
16. Self and Nonself Recognition with Bacterial and Animal Glycans, Surveys by Synthetic Chemistry	323
Yukari Fujimoto, Katsunori Tanaka, Atsushi Shimoyama, and Koichi Fukase	
1. Overview	324
2. Bacterial Glycoconjugates for Nonself Recognition — Lipopolysaccharide (LPS)	325
3. Synthesis of <i>H. pylori</i> Kdo-Lipid A Backbone	327

4. Glycosylation with Kdo Donor 11	327
5. Cytokine (IL-6) Induction in Human Peripheral Whole-Blood Cell Cultures	328
6. Bacterial Glycoconjugates for Nonspecific Recognition—Peptidoglycan (PGN)	329
7. Synthesis of Disaccharide Moiety 15 in Tracheal Cytotoxin with β -Selective Glycosylation	331
8. Synthesis of Tracheal Cytotoxin 20 and Its Fragment 21	332
9. Immunostimulatory Activities of DAP Containing PGN Fragments	333
10. Visualizing the <i>In Vivo</i> Dynamics of Animal <i>N</i> -Glycans	333
11. PET Imaging of Glycoproteins	334
12. Method for ^{68}Ga -DOTA Labeling and MicroPET Imaging in Rabbit	335
13. PET Imaging of Glycoclusters	337
14. Method for Preparation of <i>N</i> -Glycan Clusters and PET Imaging in Mouse	338
Acknowledgments	339
References	340
17. Multivalent Ligands for Siglecs	343
Mary K. O'Reilly and James C. Paulson	
1. Introduction	344
2. Materials and Methods	350
3. Conclusions and Future Directions	359
Acknowledgments	360
References	361
18. Intramolecular Glycan-Protein Interactions in Glycoproteins	365
Adam W. Barb, Andrew J. Borgert, Mian Liu, George Barany, and David Live	
1. Introduction	365
2. O-Linked Glycoproteins	367
3. N-Linked Glycoproteins	374
Acknowledgments	382
References	382
19. Methods to Study the Biosynthesis of Bacterial Furanosides	389
Myles B. Poulin and Todd L. Lowary	
1. Introduction	390
2. Chemoenzymatic Preparation of Furanose Nucleotides	393
3. Pyranose-Furanose Mutases Involved in Furanose Nucleotide Biosynthesis	398

4. Galactofuranosyltransferases Involved in Galactofuranoside Biosynthesis	402
Acknowledgments	407
References	407
20. The Synthesis of 1,2-<i>cis</i>-Amino Containing Oligosaccharides Toward Biological Investigation	413
Shino Manabe	
References	431
21. Aminoglycosides: Redesign Strategies for Improved Antibiotics and Compounds for Treatment of Human Genetic Diseases	437
Varvara Pokrovskaya, Igor Nudelman, Jeyakumar Kandasamy, and Timor Baasov	
1. Introduction	438
2. Aminoglycoside Antibiotics: Their Mode of Action and Major Drawbacks	440
3. Strategies Toward Development of Improved Antibiotics	443
4. Aminoglycosides as Readthrough Inducers for the Treatment of Genetic Diseases	454
5. Concluding Remarks and Future Perspectives	458
Acknowledgments	458
References	459
22. Solid Phase Synthesis of Oligosaccharides	463
Markus Weishaupt, Steffen Eller, and Peter H. Seeberger	
1. Introduction	464
2. Solid Phase Techniques and Strategies	465
3. Solid Phase Synthesis of Carbohydrates	468
4. Automated Solid Phase Synthesis of Carbohydrates	472
5. Conclusions and Outlook	476
6. Experimental Data for the Synthesis of Protected Globo-H	479
Acknowledgments	481
References	481
23. Novel Synthesis of Functional Mucin Glycopeptides Containing Both <i>N</i>- and <i>O</i>-Glycans	485
Takahiko Matsushita and Shin-Ichiro Nishimura	
1. Overview	486
2. Design of MUC1-Related Neoglycoprotein	487

3. Solid-Phase Glycopeptide Synthesis Using Microwave-Assisted Protocol	488
4. Production and Purification of SrtA	490
5. SrtA-Mediated Ligation	491
6. Endo-M-Mediated Transglycosylation	494
7. One-Pot Enzymatic Sugar Elongation Catalyzed by Glycosyltransferases	496
8. Chemoselective Polymer Blotting	499
9. BLase-Catalyzed Cleavage from Supporting Polymer	499
10. Compound Characterization by Mass Spectrometry and Amino Acid Analysis	500
References	501
24. Synthesis of Glycopeptides	503
Yasuhiro Kajihara, Ryo Okamoto, Naoki Yamamoto, and Masayuki Izumi	
1. Introduction	504
2. Preparation of N-Linked Complex Type Oligosaccharides	504
3. Synthesis of Large Glycopeptides by Use of Efficient Peptide Coupling Method	511
4. Native Chemical Ligation of Glycopeptide	511
5. Expanding Scope of Native Chemical Ligation	513
6. Conclusion	517
References	517
25. Renewed Synthetic Approach to Gangliosides Exploiting Versatile and Powerful Synthetic Units	521
Hiromune Ando, Hideharu Ishida, and Makoto Kiso	
1. Background	522
2. Design of a Systematic Strategy Toward Gangliosides Found in Mammals	523
3. Renewal of the Synthesis of Sialyl Galactose Unit	525
4. Sialyl Galactose Unit for Ganglio-Series Ganglioside Synthesis	528
5. Cassette Approach to Glycolipid Synthesis	528
6. Synthesis of Echinoderm Ganglioside	531
7. Experimental Procedure	534
References	539
26. Metabolic Labeling of Glycoconjugates with Photocrosslinking Sugars	541
Seok-Ho Yu, Michelle R. Bond, Chad M. Whitman, and Jennifer J. Kohler	
1. Introduction	542
2. Synthesis of Photocrosslinking Sugars	545

3. Metabolic Incorporation of Photocrosslinkers into Glycans in Cell Culture	548
4. Analysis of CMP-Sialic Acids in Cell Lysates by HPAEC	550
5. Cell Surface Display of SiaDAz in Sialic Acid-Deficient Cells	552
6. Characterization of SiaDAz-Containing Gangliosides	555
7. Covalent Capture of Glycan-Mediated Interactions Using Photocrosslinking Sialic Acid	557
8. Conclusion	559
Acknowledgments	559
References	560
27. Identification of Carbohydrate-Binding Proteins by Carbohydrate Mimicry Peptides	563
Michiko N. Fukuda and Tohru Yoneyama	
1. Overview	564
2. Materials	564
3. Preparation of an Affinity Ligand Agarose Column	565
4. Visualization of Carbohydrate-Binding Proteins	565
5. Peptide Affinity Chromatography	567
6. Use of Carbohydrate Mimicry Peptides as a Research Reagent	570
Acknowledgments	570
References	571
