Graphical Representation and Mathematical Characterization of Protein Sequences and Applications to Viral Proteins

AMBARNIL GHOSH AND ASHESH NANDY

I. Introduction	2
II. Graphical Methods	9
III. Application to Viral Proteins	21
IV. Conclusion	32
References	32

Structural, Thermodynamic, and Mechanistical Studies in Uroporphyrinogen III Synthase: Molecular Basis of Congenital Erythropoietic Porphyria

AROLA FORTIAN, DAVID CASTAÑO, ESPERANZA GONZALEZ, ANA LAÍN,
JUAN M. FALCON-PEREZ, AND OSCAR MILLET

I. Introduction	44
II. Uroporphyrinogen III Synthase	47
III. Molecular Basis of CEP	54
IV. The Hotspot Mutation C73R-UROIIIIS	62
V. Treatment of CEP	66
VI. Concluding Remarks	69
References	71

Role of Fibrin Structure in Thrombosis and Vascular Disease

AMY L. CILIA LA CORTE, HELEN PHILIPPOU, AND ROBERT A. S. ARIÉNS

I. Introduction	76
II. The Coagulation Cascade	77

III. Fibrinogen Structure and Function	81
IV. Factor XIII Structure and Function	84
V. Clot Formation and Function	86
VI. Fibrinolysis	91
VII. Elastic Properties of Fibrin	94
VIII. Heterogeneity in Coagulation and Fibrin Structure	96
IX. Environmental Factors and Fibrin Structure	102
X. Fibrin Density and Thrombosis	105
XI. Interactions with Cells and Wound Healing	107
XII. Perspectives	109
References	110

Structural, Dynamic, and Functional Aspects of Helix Association in Membranes: A Computational View

ANTON A. POLYANSKY, PAVEL E. VOLYNSKY, AND ROMAN G. EFREMOV

I. Introduction	130
II. Prediction of Structure of HH Dimers	133
III. Free Energy of TM Helix-Helix Association	141
IV. Combination of Modeling and Experimental Techniques	146
V. Limitations and Shortcomings of the Computational Methods	148
VI. Comparison with NMR Models: How Reliable Is The Reference?	150
VII. Is an Accurate Structure Prediction Always Required?	151
VIII. What Makes TM Helices Suitable Pharmacological Targets?	152
IX. Modeling of TM Helical Dimers as a First Step Toward 3D Structure of Polytopic MPs	152
X. From Structure and Thermodynamics to Function and Design	153
XI. Conclusion	154
References	155

**Proteins Move! Protein Dynamics and Long-Range Allostery in
Cell Signaling**

ZIMEI BU AND DAVID J. E. CALLAWAY

I. Introduction	164
II. NHERF1 Modulates the Macromolecular Assembly, Cell Surface Retention, and Subcellular Localization of Membrane Proteins	167
III. Signal Transduction by Allosteric Scaffolding Protein Interactions	171
IV. Structural Basis of Autoinhibition and Long-Range Allostery in NHERF1	178
V. Dynamic Propagation of Allosteric Signals by Nanoscale Protein Motion	186
VI. Summary and Perspective	213
References	214

**Structural Diversity of Class I MHC-like Molecules and Its
Implications in Binding Specificities**

MD. IMTAIYAZ HASSAN AND FAIZAN AHMAD

I. Introduction	224
II. Sequence Analysis	227
III. Structure Analysis	239
IV. Glycosylation	258
V. Conclusion	261
References	262
