

CONTENTS

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
<i>Volumes in Series</i>	<i>xvii</i>

1. Measurement and Analysis of Equilibrium Binding Titrations: A Beginner's Guide	1
Dorothy Beckett	
1. Material Requirements for Binding Measurements	2
2. Monitoring a Binding Reaction	2
3. The Binding Equation and Its Relationship to Binding Measurements	5
4. Plotting and Analysis of Binding Data	8
5. Protein Concentration Is Important: Equilibrium Versus Stoichiometric Conditions	10
6. When Are Total and Free Ligand Concentrations Equal?	14
7. Deviations from Simple Binding	14
References	16
2. Macromolecular Competition Titration Method: Accessing Thermodynamics of the Unmodified Macromolecule-Ligand Interactions Through Spectroscopic Titrations of Fluorescent Analogues	17
Włodzimierz Bujalowski and Maria J. Jezewska	
1. Introduction	18
2. A Single Titration Curve: Some Simple Considerations of Possible Pitfalls	20
3. Quantitative Equilibrium Spectroscopic Titrations: Thermodynamic Bases	24
4. Nucleotide Binding to the RepA Protein of Plasmid RSF1010	29
5. Applying the Statistical Thermodynamic Model for the Nucleotide Binding to the RSF1010 RepA Protein Hexamer	32
6. Empirical Function Approach	35
7. MCT Method: General Considerations	36
8. Application of the MCT Method to the Base Specificity Problem in ASFV Pol X-ssDNA System	39
9. Application of MCT Method to Protein-ssDNA Lattice Binding Systems	41

10. Quantitative Analysis of the Binding of the <i>E. coli</i> DnaB Helicase to Unmodified Nucleic Acids Using the MCT Method	46
11. Direct Analysis of the Experimental Isotherm of Protein Ligand Binding to Two Competing Nucleic Acid Lattices	48
12. Using a Single Concentration of a Nonfluorescent Unmodified Nucleic Acid	52
13. Using Short Fluorescent Oligonucleotides in Competition with the Polymer Nucleic Acid	53
14. Conclusions	55
Acknowledgments	55
References	56
3. Analysis of PKR–RNA Interactions by Sedimentation Velocity	59
C. Jason Wong, Katherine Launer-Felty, and James L. Cole	
1. Introduction	60
2. Reagents and Cells	62
3. Experimental Design	64
4. Examples	67
5. Conclusions	75
Acknowledgments	75
References	76
4. Structural and Thermodynamic Analysis of PDZ–Ligand Interactions	81
Tyson R. Shepherd and Ernesto J. Fuentes	
1. Introduction	82
2. Structural Studies of the Tiam1 PDZ Domain	83
3. Fluorescence Anisotropy Methods for Measuring the Energetics of PDZ–Ligand Interactions	87
4. Double-Mutant Cycle Analysis of PDZ-Binding Pockets	93
5. Peptide Evolution as a Tool for Probing PDZ Specificity	95
6. Conclusions	98
Acknowledgments	99
References	99
5. Thermodynamic Analysis of Metal Ion-Induced Protein Assembly	101
Andrew B. Herr and Deborah G. Conrady	
1. Introduction	102
2. Linked Equilibria—General Concepts	103
3. Experimental Approaches—Analytical Ultracentrifugation	106

4. Summary	118
Acknowledgments	119
References	119
6. Thermodynamic Dissection of Colicin Interactions	123
Nicholas G. Housden and Colin Kleanthous	
1. Introduction	124
2. DNase Domain-Immunity Protein Interactions	132
3. Receptor Binding	137
4. Mapping Binding Epitopes and Signaling Networks	140
5. Discussion	143
References	144
7. Energetics of Src Homology Domain Interactions in Receptor Tyrosine Kinase-Mediated Signaling	147
John E. Ladbury and Stefan T. Arold	
1. Introduction	148
2. Interactions of Src Homology 2 Domains	149
3. Recognition by the "Two-Pinned Plug"	153
4. Recognition by the β -Turn Motif	159
5. Selectivity Versus Specificity for SH2 Domain Interactions	160
6. Proline Sequence-Recognition Domains	162
7. Interactions of SH3 Domains	163
8. What Constitutes Specificity in SH3 Domain Interactions?	169
9. Selectivity in SH3 Domain Interactions	171
10. Interactions Through Multiple Domains	174
11. Conclusions	176
References	177
8. Structural and Functional Energetic Linkages in Allosteric Regulation of Muscle Pyruvate Kinase	185
J. Ching Lee and Petr Herman	
1. Introduction	187
2. General Principles of Linked Multiequilibria Reactions	187
3. Functional Energetic Linkages in Allosteric Regulation of Rabbit Muscle Pyruvate Kinase	189
4. Functional Linkage Through Steady-State Kinetics	190
5. Structural Perturbations by Ligands	193
6. Functional Linkage Scheme of Allostery for RMPK	201
7. Functional Linkage Through Ligand Binding Measurements	202

8. Protein Structural Dynamics—Amid Hydrogen Exchange Monitored by FT-IR (HX-FT-IR)	209
9. Probing Interfacial Interactions	210
10. Summary Statement	212
Acknowledgments	213
References	213
9. Analysis of Free Energy Versus Temperature Curves in Protein Folding and Macromolecular Interactions	219
Vince J. LiCata and Chin-Chi Liu	
1. Stability Curves = Gibbs–Helmholtz Curves = ΔG Versus Temperature	220
2. Analysis of ΔG Versus Temperature in Protein Folding	223
3. Using Stability Curves to Compare Mesophilic and Thermophilic Protein Pairs	225
4. Temperature Dependence of Folding Enthalpies and Entropies	226
5. Analysis of ΔG Versus Temperature Data in Macromolecular Interactions	229
6. Fitting ΔH and ΔG Versus Temperature for a $\Delta\Delta C_p$	230
7. Examples of Potential Consequences of a Small $\Delta\Delta C_p$	235
References	237
10. Application of the Sequential n-Step Kinetic Mechanism to Polypeptide Translocases	239
Aaron L. Lucius, Justin M. Miller, and Burki Rajendar	
1. Introduction	240
2. Single-Turnover Fluorescence Stopped-Flow Method to Monitor Polypeptide Translocation	241
3. Application of the Sequential n-Step Mechanism	246
4. Concluding Remarks	262
Acknowledgments	263
References	263
11. A Coupled Equilibrium Approach to Study Nucleosome Thermodynamics	265
Andrew J. Andrews and Karolin Luger	
1. Introduction	266
2. Salt-Mediated Nucleosome (Dis)Assembly	267
3. A Chaperone-Mediated Coupled Approach to Nucleosome Thermodynamics	269
4. Experimental Setup and Considerations	275

5. Data Analysis and Theory	276
6. Summary and Implications	282
References	284
 12. Quantitative Methods for Measuring DNA Flexibility <i>In Vitro</i> and <i>In Vivo</i>	 287
Justin P. Peters, Nicole A. Becker, Emily M. Rueter, Zeljko Bajzer, Jason D. Kahn, and L. James Maher III	
1. Introduction	288
2. DNA Polymer Theory	289
3. Ligase-Catalyzed DNA Cyclization Kinetics <i>In Vitro</i>	292
4. <i>In Vivo</i> Analysis of <i>E. coli lac</i> Repression Loops	302
Acknowledgments	314
References	333
 <i>Author Index</i>	 337
<i>Subject Index</i>	349
