

CONTENTS

Contributors	xiii
Preface	xxi
Volumes in Series	xxiii

1. Predicting Fluorescence Lifetimes and Spectra of Biopolymers	1
Patrik R. Callis	
1. Introduction	2
2. Qualitative Concepts: Developing Intuition	7
3. Methods	14
4. Nonexponential Fluorescence Decay	25
5. Final Remarks	28
Acknowledgments	34
References	34
2. Modeling of Regulatory Networks: Theory and Applications in the study of the <i>Drosophila</i> Circadian Clock	39
Elizabeth Y. Scribner and Hassan M. Fathallah-Shaykh	
1. Introduction	40
2. Developmental History of the <i>Drosophila</i> Circadian Clock	42
3. Comparative Analysis of Three Network Regulatory Models	51
4. The CWO Anomaly and a New Network Regulatory Rule	63
5. Concluding Remarks	67
References	69
3. Strategies for Articulated Multibody-Based Adaptive Coarse Grain Simulation of RNA	73
Mohammad Poursina, Kishor D. Bhalerao, Samuel C. Flores, Kurt S. Anderson, and Alain Laederach	
1. Introduction	74
2. Need for the Development of Adaptive Coarse-Graining Machinery	78
3. Metrics to Guide Transitions in Adaptive Modeling	83
4. Adaptive Modeling Framework in DCA Scheme	89
5. Conclusions	96

Acknowledgments	96
References	96
4. Modeling Loop Entropy	99
Gregory S. Chirikjian	
1. Introduction	100
2. Computing Bounds on the Entropy of the Unfolded Ensemble	113
3. Approximating Entropy of the Loops in the Folded Ensemble	119
4. Examples	120
5. Conclusions	127
Acknowledgments	128
References	128
5. Inferring Functional Relationships and Causal Network Structure from Gene Expression Profiles	133
Radhakrishnan Nagarajan and Meenakshi Upreti	
1. Introduction	134
2. Methods	136
3. Results	141
4. Conclusions	144
References	145
6. Numerical Solution of the Chemical Master Equation: Uniqueness and Stability of the Stationary Distribution for Chemical Networks, and mRNA Bursting in a Gene Network with Negative Feedback Regulation	147
E. S. Zeron and M. Santillán	
1. Introduction	148
2. The Chemical Master Equation	150
3. Irreducible Chemical Reaction Systems	152
4. Stability of the Chemical Master Equation Stationary Probability Distribution	153
5. Two Different Algorithms to Calculate Stationary Probability Distributions for the Chemical Master Equation	157
6. Gene Expression with Negative Feedback Regulation	160
7. Concluding Remarks	167
References	167

7. How Molecular Should Your Molecular Model Be?	171
Didier Gonze, Wassim Abou-Jaoudé, Djomangan Adama Ouattara, and José Halloy	
1. Introduction	172
2. Michaelis–Menten Kinetics Revisited	175
3. Use of the Hill Kinetics for Transcription Rate	185
4. Repressilator	190
5. Toggle Switch	198
6. Discussion	204
7. Conclusion	210
Acknowledgments	211
References	211
8. Computational Modeling of Biological Pathways by Executable Biology	217
Maria Luisa Guerriero and John K. Heath	
1. Introduction	218
2. Executable Modeling Languages for Biology	220
3. Intuitive Representation of Formal Models	226
4. Case Studies	233
5. Conclusions and Perspectives	248
Acknowledgments	248
References	248
9. Computing Molecular Fluctuations in Biochemical Reaction Systems Based on a Mechanistic, Statistical Theory of Irreversible Processes	253
Don Kulasiri	
1. Introduction	254
2. Theoretical Developments	256
3. Elementary Chemical Reactions	260
4. An Example of Chemical Reaction	262
5. Activation of Transcriptional Factors	266
6. Binding and Unbinding TF to E-boxes	269
7. Binding and Unbinding of Activated TF to E-Boxes	273
8. Conclusions	277
Acknowledgments	277
References	277

10. Probing the Input–Output Behavior of Biochemical and Genetic Systems: System Identification Methods from Control Theory	279
Jordan Ang, Brian Ingalls, and David McMillen	
1. Introduction	280
2. System Identification Applied to a G-Protein Pathway	282
3. System Identification	291
4. Conclusion	311
References	316
11. Biochemical Pathway Modeling Tools for Drug Target Detection in Cancer and Other Complex Diseases	319
Alberto Marin-Sanguino, Shailendra K. Gupta, Eberhard O. Voit, and Julio Vera	
1. Introduction and Overview	320
2. Biomedical Knowledge and Data Retrieval: Constructing a Conceptual Map of a Biochemical Network	325
3. Mathematical Modeling of Biochemical Networks: Translating Knowledge into Mathematical Equations	327
4. Model Calibration: Matching the Mathematical Model to Quantitative Experimental Data	337
5. Predictive Model Simulations as a Tool for Drug Discovery	341
6. Model Sensitivity Analysis as a Tool for Detecting Critical Processes in Biochemical Networks	345
7. Drug Target Detection Through Model Optimization	350
8. One Step Further: Combining Mathematical Modeling with Drug Screening via Protein Docking-Based Techniques	356
9. Final Remarks	359
Acknowledgments	367
References	367
12. Deterministic and Stochastic Simulation and Analysis of Biochemical Reaction Networks: The Lactose Operon Example	371
Necmettin Yildirim and Caner Kazanci	
1. Introduction	372
2. Mathematical Modeling of Biochemical Reaction Networks and Law of Mass Action	372
3. Stochastic Simulations	381
4. An Example: Lactose Operon in <i>E. coli</i>	386
5. Conclusions and Discussion	393
Acknowledgment	395
References	395

13. Multivariate Neighborhood Sample Entropy: A Method for Data Reduction and Prediction of Complex Data	397
Joshua S. Richman	
1. Introduction	398
2. Current Methods and Limitations	398
3. k-Nearest Neighbors	399
4. Sample Entropy	400
5. Multivariate Neighborhood Sample Entropy: Mn-SampEn	401
6. Relationship Between kNN and MN-SampEn	402
7. Relationship Between SampEn and MN-SampEn	402
8. Applying MN-SampEn to Proteomics Data	403
9. Algorithmic Implementation and Optimizing Tolerances	403
10. Results	405
11. Discussion	407
12. Limitations and Future Directions	408
References	408
14. Scaling Differences of Heartbeat Excursions Between Wake and Sleep Periods	409
L. Guzmán-Vargas, I. Reyes-Ramírez, R. Hernández-Pérez, and F. Angulo-Brown	
1. Introduction	410
2. Methods	411
3. Data Analysis	414
4. Conclusions	427
Acknowledgments	428
References	428
15. Changepoint Analysis for Single-Molecule Polarized Total Internal Reflection Fluorescence Microscopy Experiments	431
John F. Beausang, Yale E. Goldman, and Philip C. Nelson	
1. Overview	433
2. Multiple Channels	439
3. Detailed Analysis	442
4. Simulation Results	450
5. Discussion	457
6. Conclusion	461
Acknowledgments	462
References	462

16. Inferring Mechanisms from Dose-Response Curves	465
Carson C. Chow, Karen M. Ong, Edward J. Dougherty, and S. Stoney Simons Jr.	
1. Introduction	466
2. General Theory	467
3. Application of Model to Data	472
4. Discussion	479
Acknowledgments	482
References	482
17. Spatial Aspects in Biological System Simulations	485
Haluk Resat, Michelle N. Costa, and Harish Shankaran	
1. Introduction	486
2. Methods and Frameworks	489
3. Summary and Future Prospects	508
Acknowledgments	509
References	509
18. Computational Approaches to Modeling Viral Structure and Assembly	513
Stephen C. Harvey, Anton S. Petrov, Batsal Devkota, and Mustafa Burak Boz	
1. Introduction	514
2. Double-Stranded DNA (dsDNA) Bacteriophage	514
3. Single-Stranded RNA Viruses	526
Acknowledgments	540
References	540
19. ROSETTA3: An Object-Oriented Software Suite for the Simulation and Design of Macromolecules	545
Andrew Leaver-Fay, Michael Tyka, Steven M. Lewis, Oliver F. Lange, James Thompson, Ron Jacak, Kristian Kaufman, P. Douglas Renfrew, Colin A. Smith, Will Sheffler, Ian W. Davis, Seth Cooper, Adrien Treuille, Daniel J. Mandell, Florian Richter, Yih-En Andrew Ban, Sarel J. Fleishman, Jacob E. Corn, David E. Kim, Sergey Lyskov, Monica Berrondo, Stuart Mentzer, Zoran Popović, James J. Havranek, John Karanicolas, Rhiju Das, Jens Meiler, Tanja Kortemme, Jeffrey J. Gray, Brian Kuhlman, David Baker, and Philip Bradley	
1. Introduction	546
2. Requirements	548

3. Design Decisions	550
4. Architecture	554
5. Conclusion	571
Acknowledgments	572
References	572
20. Computational Design of Intermolecular Stability and Specificity in Protein Self-assembly	575
Vikas Nanda, Sohail Zahid, Fei Xu, and Daniel Levine	
1. Introduction	576
2. Similarities and Differences Between Unimolecular Folding and Self-assembly	577
3. Computational Approaches to Optimizing Stability and Specificity	579
4. Collagen Self-assembly	584
5. Considerations in Computational Design of Collagen Heteromers	587
6. Conclusions	591
References	591
21. Differential Analysis of 2D Gel Images	595
Feng Li and Françoise Seillier-Moisewitsch	
1. Introduction	596
2. Differential Analysis of 2D Gel Images	597
3. Analyzing 2D Gel Images Using <i>RegStatGel</i>	599
4. Illustration of an Exploratory Analysis Using <i>RegStatGel</i>	606
5. Concluding Remarks	608
References	609
<i>Author Index</i>	611
<i>Subject Index</i>	627
