

CONTENTS

<i>Contributors</i>	<i>xiii</i>
<i>Preface</i>	<i>xxi</i>
<i>Volumes in Series</i>	<i>xxiii</i>

1. Super-Accuracy and Super-Resolution: Getting Around the Diffraction Limit	1
Erdal Toprak, Comert Kural, and Paul R. Selvin	
1. Overview: Accuracy and Resolution	2
2. Getting Super-Accuracy	4
3. Calculating Super-Accuracy	7
4. Reaching Super-Resolution	13
5. Future Directions	22
References	22
2. Molecules and Methods for Super-Resolution Imaging	27
Michael A. Thompson, Julie S. Biteen, Samuel J. Lord, Nicholas R. Conley, and W. E. Moerner	
1. Introduction	28
2. Molecules for Super-Resolution Imaging	30
3. Selected Methods for Super-Resolution Imaging	46
Acknowledgments	55
References	55
3. Tracking Single Proteins in Live Cells Using Single-Chain Antibody Fragment-Fluorescent Quantum Dot Affinity Pair	61
Gopal Iyer, Xavier Michalet, Yun-Pei Chang, and Shimon Weiss	
1. Introduction	62
2. The Method: Targeting QDs via a Single-Chain Variable Fragment-Hapten Pair	64
3. Functionalization of QDs	66
4. Quantification of the Number of FL Molecules per FL-pc-QD	69
5. Binding of FL-QDs to Anti-scFv Fusion Constructs	71
6. DNA Constructs for Single FL-QD Imaging in Live Cells	73

7. Single-Molecule Imaging of Live Mammalian Cells	74
Acknowledgments	75
References	77
4. Recording Single Motor Proteins in the Cytoplasm of Mammalian Cells	81
Dawen Cai, Neha Kaul, Troy A. Lionberger, Diane M. Wiener, Kristen J. Verhey, and Edgar Meyhofer	
1. Introduction	82
2. Basic Principles	84
3. Labeling Molecular Motors for <i>In Vivo</i> Observations	85
4. Instrumentation for Tracking Single Motors <i>In Vivo</i>	89
5. Detailed Experimental Procedures	95
6. Summary and Conclusions	103
Acknowledgments	103
References	104
5. Single-Particle Tracking Photoactivated Localization Microscopy for Mapping Single-Molecule Dynamics	109
Suliana Manley, Jennifer M. Gillette, and Jennifer Lippincott-Schwartz	
1. Introduction	110
2. Description of the sptPALM Method	111
3. Labeling with Photoactivatable Fluorescent Probes	113
4. Tracking Single Molecules	114
5. Experimental Example: sptPALM on a Membrane Protein	116
6. Conclusions	118
References	118
6. A Bird's Eye View: Tracking Slow Nanometer-Scale Movements of Single Molecular Nano-Assemblies	121
Nicole Michelotti, Chamaree de Silva, Alexander E. Johnson-Buck, Anthony J. Manzo, and Nils G. Walter	
1. Introduction	122
2. DNA-Based Nanowalkers	125
3. Considerations for Fluorescence Imaging of Slowly Moving Particles	129
4. Single-Molecule Fluorescence Tracking of Nanowalkers	131
5. Extracting Super-Resolution Position Information	136
6. Concluding Remarks	143
Acknowledgments	144
References	144

7. Anti-Brownian Traps for Studies on Single Molecules	149
Alexander P. Fields and Adam E. Cohen	
1. Theoretical Overview	150
2. Anti-Brownian Trapping Systems	155
3. The ABEL Trap	161
4. Applications	169
5. Future Work: <i>En Route</i> to Single Fluorophores	170
Acknowledgments	171
References	171
8. Plasmon Rulers as Dynamic Molecular Rulers in Enzymology	175
Björn M. Reinhard, Jaime M. Yassif, Peter Vach, and Jan Liphardt	
1. Introduction	176
2. The Basic Idea: Distance Dependence of Plasmon Coupling	177
3. Hardware Needed for Single Particle Rayleigh Scattering Spectroscopy	179
4. Which Readout—Intensity, Polarization, or Color?	181
5. Ruler Calibration?	182
6. Plasmon Ruler Assembly and Purification	184
7. Example 1: Dynamics of DNA Bending and Cleavage by Single EcoRV Restriction Enzymes	186
8. Example 2: Spermidine Modulated Ribonuclease Activity Probed by RNA Plasmon Rulers	192
9. Outlook	194
References	196
9. Quantitative Analysis of DNA-Looping Kinetics from Tethered Particle Motion Experiments	199
Carlo Manzo and Laura Finzi	
1. Introduction	200
2. Change-Point Algorithm	201
3. Data Clustering and Expectation-Maximization Algorithm	203
4. Adaptation of the Method to the Case of TPM Data Analysis	204
5. Performance of the Method	209
6. Comparison with the Threshold Method	212
7. Application to TPM Experiments: CI-Induced Looping in λ -DNA	215
8. Conclusions	217
Acknowledgments	218
References	218

10. Methods in Statistical Kinetics	221
Jeffrey R. Moffitt, Yann R. Chemla, and Carlos Bustamante	
1. Introduction	222
2. The Formalism of Statistical Kinetics	223
3. Characterizing Fluctuations	232
4. Extracting Mechanistic Constraints from Moments	240
5. Conclusions and Future Outlook	248
References	255
11. Visualizing DNA Replication at the Single-Molecule Level	259
Nathan A. Tanner and Antoine M. van Oijen	
1. Introduction	260
2. Observing Replication Loops with Tethered Bead Motion	261
3. Fluorescence Visualization of DNA Replication	271
Acknowledgments	277
References	277
12. Measurement of the Conformational State of F_1-ATPase by Single-Molecule Rotation	279
Daichi Okuno, Mitsunori Ikeguchi, and Hiroyuki Noji	
1. Introduction	280
2. Sample Preparation	282
3. Single-Molecule Cross-Link Experiment	287
4. Pausing with AMP-PNP or/and N_3^-	293
Acknowledgments	295
References	295
13. Magnetic Tweezers for the Study of DNA Tracking Motors	297
Maria Manosas, Adrien Meglio, Michelle M. Spiering, Fangyuan Ding, Stephen J. Benkovic, François-Xavier Barre, Omar A. Saleh, Jean François Allemand, David Bensimon, and Vincent Croquette	
1. Introduction	298
2. Experimental Setup	299
3. Methods and Protocols	300
4. Application to the Study of FtsK	308
5. Application to the Study of the GP41 Helicase	312
6. Conclusions	318
Acknowledgments	319
References	319

14. Single-Molecule Dual-Beam Optical Trap Analysis of Protein Structure and Function	321
Jongmin Sung, Sivaraj Sivaramakrishnan, Alexander R. Dunn, and James A. Spudich	
1. Introduction	322
2. Insights into Myosin Function Using a Dual-Beam Optical Trap	322
3. Optical Trap Instrumentation	324
4. Optical Trapping Experiment	358
5. Data Analysis	361
6. Conclusion	369
Acknowledgments	372
References	372
15. An Optical Apparatus for Rotation and Trapping	377
Braulio Gutiérrez-Medina, Johan O. L. Andreasson, William J. Greenleaf, Arthur LaPorta, and Steven M. Block	
1. Introduction	378
2. Optical Trapping and Rotation of Microparticles	379
3. The Instrument	385
4. Fabrication of Anisotropic Particles	390
5. Instrument Calibration	395
6. Simultaneous Application of Force and Torque Using Optical Tweezers	400
7. Conclusions	402
Acknowledgments	402
References	403
16. Force-Fluorescence Spectroscopy at the Single-Molecule Level	405
Ruobo Zhou, Michael Schlierf, and Taekjip Ha	
1. Introduction	406
2. Setup	407
3. Optical Trapping	410
4. Fluorescence Detection	413
5. Coalignment of Confocal and Optical Trapping	416
6. Sample Preparation Protocols	418
7. Applications to Biological Systems	423
8. Outlook	423
Acknowledgments	424
References	424

17. Combining Optical Tweezers, Single-Molecule Fluorescence Microscopy, and Microfluidics for Studies of DNA-Protein Interactions	427
Peter Gross, Géraldine Farge, Erwin J. G. Peterman, and Gijs J. L. Wuite	
1. Introduction	428
2. Instrumentation	430
3. Preparation of Reagents	443
4. Combining Optical Trapping, Fluorescence Microscopy, and Microfluidics: Example Protocols	445
5. Conclusions	450
Acknowledgments	451
References	451
18. Accurate Single-Molecule FRET Studies Using Multiparameter Fluorescence Detection	455
Evangelos Sisamakís, Alessandro Valeri, Stanislav Kalinin, Paul J. Rothwell, and Claus A. M. Seidel	
1. Introduction	456
2. FRET Theory	461
3. Fluorescence Properties and Measurement Techniques	466
4. Qualitative Description of smFRET	474
5. Quantitative Description of smFRET	489
6. Discussion	503
Acknowledgments	505
References	506
19. Atomic Force Microscopy Studies of Human Rhinovirus: Topology and Molecular Forces	515
Ferry Kienberger, Rong Zhu, Christian Rankl, Hermann J. Gruber, Dieter Blaas, and Peter Hinterdorfer	
1. Introduction	516
2. Results and Discussion	517
References	536

20. High-Speed Atomic Force Microscopy Techniques for Observing Dynamic Biomolecular Processes	541
Daisuke Yamamoto, Takayuki Uchihashi, Noriyuki Kodera, Hayato Yamashita, Shingo Nishikori, Teru Ogura, Mikihiro Shibata, and Toshio Ando	
1. Introduction	542
2. Survey of Requirements for High-Speed Bio-AFM Imaging	543
3. Substrate Surfaces	544
4. Control of Diffusional Mobility	554
5. Protein 2D Crystals as Targets to Study	555
6. Low-Invasive Imaging	558
7. UV Flash-Photolysis of Caged Compounds	559
8. Cantilever Tip	561
References	562
21. Nanopore Force Spectroscopy Tools for Analyzing Single Biomolecular Complexes	565
Olga K. Dudko, Jérôme Mathé, and Amit Meller	
1. Introduction	566
2. The Nanopore Method	567
3. DNA Unzipping Kinetics Studied Using Nanopore Force Spectroscopy	577
4. Conclusions and Summary	585
Acknowledgments	587
References	587
22. Analysis of Single Nucleic Acid Molecules with Protein Nanopores	591
Giovanni Maglia, Andrew J. Heron, David Stoddart, Deanpen Japrun, and Hagan Bayley	
1. Background: Analysis of Nucleic Acids with Nanopores	593
2. Electrical Recording with Planar Lipid Bilayers	601
3. Nanopores	610
4. Materials	613
5. Data Acquisition and Analysis	616
References	619
