
CONTENTS

Contributors	xv
Preface	xxi

PART I Assembly

1. Assembly of Ion Channels	
<i>ZuFang Sheng and Carol Deusch</i>	
I. Introduction	3
II. Strategies and Methods	5
References	16

PART II Genetics

2. Identification of Ion Channel-Associated Proteins Using the Yeast Two-Hybrid System	
<i>Martin Niethammer and Morgan Sheng</i>	
I. Introduction	21
II. Principles of Two-Hybrid System	22
III. Materials and Methods	23
IV. Limitations, Perspectives, and Outlooks	34
Appendix: Solutions	34
References	37

PART III Electrophysiology

3. Patch-Clamp Studies of Cystic Fibrosis Transmembrane Conductance Regulator Chloride Channel	
<i>John W. Hanrahan, Zie Kone, Ceri J. Mathews, Jiexin Luo, Yanlin Jia, and Paul Linsdell</i>	
I. Introduction	42
II. Choice of Expression Systems	42

III. General Patch-Clamp Methods	43
IV. CFTR Channel Permeation	44
V. Regulation of CFTR Chloride Channel	51
VI. DRSCAN: A pCLAMP-Compatible Program for Analyzing Long Records	56
Appendix	58
References	63
 4. Tight-Seal, Whole-Cell Patch Clamping of <i>C. elegans</i> Neurons	
<i>S. R. Lockery and M. B. Goodman</i>	
I. Introduction	66
II. Overview	66
III. Preparing <i>C. elegans</i> for <i>In Situ</i> Electrophysiology	67
IV. Fabricating Patch Pipettes with Submicron Openings	70
V. Solutions	70
VI. Patch-Clamp Setup	70
VII. Recording from Neurons Labeled with GFP	72
VIII. Tight-Seal, Whole-Cell Recording	73
IX. Interpreting Patch-Clamp Recordings from Small Cells	75
X. Spatial Control of Voltage	77
XI. Prospects	78
XII. Conclusion	78
References	79
 5. Gating Currents	
<i>Francisco Bezanilla and Enrico Stefani</i>	
I. Introduction	81
II. Studying Gating Currents	82
III. Charge per Channel	83
IV. Detection Problem	84
V. Separation Problem	85
VI. Voltage Clamp	87
VII. Recording Step	89
VIII. Recording of Gating Currents	93
IX. Elementary Gating Event	96
X. Recording of Gating Currents in Frequency Domain	98
References	100
 6. Determining Ion Channel Permeation Properties	
<i>Ted Begegnich</i>	
I. Introduction	101
II. Single-Ion Nernst Potential	102

III. Ion Channel Selectivity	103
IV. Classification of Ion Pores	105
V. Pore-Blocking Studies	105
VI. Determining Pore Occupancy	106
VII. Conclusion	107
References	108

PART IV Expression Systems

7. Expression of Ligand-Gated Ion Channels Using Semliki Forest Virus and Baculovirus

Kathryn Radford and Gary Buell

I. Introduction	112
II. Generation of Viral DNA or RNA	118
III. Choice and Cultivation of Host Cells	122
IV. Amplification and Titration of Virus Stocks	124
V. Optimization of Process Parameters	127
VI. Applications of Ion Channels Expressed by Baculovirus and SFV	129
VII. Conclusion	132
References	133

8. Recombinant Adenovirus-Mediated Expression in the Nervous System of Genes Coding for Ion Channels and Other Molecules Involved in Synaptic Function

Markus U. Ehrengreber, Markus Lanzrein, Youfeng Xu, Mark C. Jasek, David B. Kantor, Erin M. Schuman, Henry A. Lester, and Norman Davidson

I. Introduction	135
II. Preparation of Recombinant Adenovirus	136
III. Techniques	139
IV. Expression of Potassium Channels	146
V. Use of Adenovirus in Acute Hippocampal Slice Physiology	148
VI. Future Directions	152
References	153

9. Transient Expression of Heteromeric Ion Channels

Alison L. Eertmoed, Yolanda F. Vallejo, and William N. Green

I. Update	155
II. Introduction	156
III. Methods	158
IV. Results	163
V. Summary	175
References	175

PART V Model Simulations

10. Computer Simulations and Modeling of Ion Channels

Michael E. Green

I. Introduction	179
II. Fundamental Statistical Ideas	183
III. Potential Energy	185
IV. Nonlinear Poisson-Boltzmann Equation	200
V. Summary of Simulation Procedures	205
References	206

PART VI Physical

11. Fluorescence Techniques for Measuring Ion Channel Activity

Gönül Veliçelebi, Kenneth A. Stauderman, Mark A. Varney, Michael Akong, Stephen D. Hess, and Edwin C. Johnson

I. Introduction	212
II. Experimental Procedures	213
III. Pharmacologic Validation of Assay	217
IV. Ion Channels with High Fractional Ca^{2+} Response	217
V. Ion Channels with Moderate Functional Ca^{2+} Response	224
VI. Ion Channels with Low Fractional Ca^{2+} Response	229
VII. Limitations of Fluorescent Dye-Based $[\text{Ca}^{2+}]_i$ Assay for Measurement of Ion Channel Activity	233
VIII. Advantages of Fluorescent Dye-Based $[\text{Ca}^{2+}]_i$ Assays	234
References	235

12. Ligand Binding Methods for Analysis of Ion Channel Structure and Function

Steen E. Pedersen, Monica M. Lurtz, and Rao V. L. Pappinen

I. Introduction to Revised Article	238
II. Introduction	238
III. Comparison of Methods	239
IV. Methods	240
V. Fluorescent Ligand Binding Assays	246
VI. Analysis of Ligand Binding	247
VII. Thermodynamic Cycle Analysis	251
References	254

13. Three-Dimensional Structure of Membrane Proteins Determined by Two-Dimensional Crystallization, Electron Cryomicroscopy, and Image Analysis	
<i>Mark Yeager, Vinzenz M. Unger, and Alok K. Mitra</i>	
I. Introduction	256
II. Steps in Structural Analysis of Membrane Proteins by Electron Cryocrystallography	258
III. Interpretation of Maps	289
IV. Conclusions	293
References	294
14. Voltage-Clamp Biosensors for Capillary Electrophoresis	
<i>Owe Onvar, Kent Jardemark, Cecilia Farre, Ingemar Jacobson, Alexander Moscho, Jason B. Shear, Harvey A. Fishman, Sheri J. Lillard, and Richard N. Zare</i>	
I. Introduction	297
II. Capillary Electrophoresis	299
III. Fabrication of Fractured Electrophoresis Capillaries	301
IV. Cell Preparation	303
V. Capillary Electrophoresis-Patch-Clamp Recording	306
VI. Two-Electrode Voltage-Clamp Recording	311
VII. Summary	313
References	313
15. Ion Channels as Tools to Monitor Lipid Bilayer-Membrane Protein Interactions: Gramicidin Channels as Molecular Force Transducers	
<i>O. S. Andersen, C. Nielsen, A. M. Maer, J. A. Lundbæk, M. Goulian, and R. E. Koeppe II</i>	
I. Recent Developments	316
II. Introduction	318
III. Protein Conformational Changes and Bilayer Perturbations	319
IV. Membrane Perturbations and Channel Function	321
V. The Membrane Deformation Energy	322
VI. Carrier Versus Channel—Choice of Reporter Protein	324
VII. Molecular Force Transducers	325
VIII. Measuring $\Delta G_{\text{bilayer}}^{I \rightarrow II}$ and the Phenomenological Spring Constant	327
IX. Conclusions	332
References	332

PART VII Purification and Reconstitution

16. Purification and Reconstitution of Epithelial Chloride Channel Cystic Fibrosis Transmembrane Conductance Regulator

Mohabir Ramjeeasingh, Elizabeth Garami, Kevin Galley, Canhui Li, Yanchun Wang, Paul D. W. Eckford, and Christine E. Bear

I. Update	338
II. Introduction	338
III. Expression of CFTR in Sf9-Baculovirus System	341
IV. Solubilization and Purification of CFTR	342
V. Reconstitution of CFTR	348
VI. Assessment of Functional Properties of Reconstituted CFTR Channels	350
References	356

17. Reconstitution of Native and Cloned Channels into Planar Bilayers

Isabelle Favre, Ye-Ming Sun, and Edward Moczydlowski

I. Update	359
II. Introduction and General Overview	360
III. Rat Muscle T-Tubule Membranes: A Reliable Source of K_{Ca}^{+} Channels and Na^{+} Channels	364
IV. Preparations for Reconstituting Diverse Types of Channels from Native Tissues	367
V. Methods for Reconstituting Cloned and Heterologously Expressed Channels into Planar Bilayers	368
References	374

PART VIII Second Messengers and Biochemical Approaches

18. Protein Phosphorylation of Ligand-Gated Ion Channels

Andrew L. Mammen, Sanjeev Kamboj, and Richard L. Huganir

I. Introduction	380
II. Biochemical Characterization of Phosphorylation of Ligand-Gated Ion Channels	380
III. Functional Effects of Ligand-Gated Ion Channel Phosphorylation	391
IV. Conclusion	395
References	395

19. Analysis of Ion Channel Associated Proteins

Michael Wyszynski and Morgan Sheng

I. Introduction	397
II. General Considerations	399
III. <i>In Vitro</i> Binding of Recombinant Proteins	399
IV. Association of Full-Length Proteins in Heterologous Cells	403
V. Colocalization of Ion Channel and Associated Protein <i>In Vivo</i>	405
VI. Coimmunoprecipitation of Ion Channel and Associated Protein from Native Tissue	407
VII. Conclusion	409
References	410

20. Secondary Messenger Regulation of Ion Channels/Plant Patch Clamping

Sarah M. Assmann and Lisa Romano

I. Update	411
II. Introduction	415
III. Membrane Access	415
IV. Patch Clamping of Plant Versus Animal Cells	423
V. Secondary Messenger Regulation of Ion Channels	426
VI. Concluding Remarks	440
Appendix	440
References	441

PART IX Special Channels

21. ATP-Sensitive Potassium Channels

M. Schwanstecher, C. Schwanstecher, F. Chudziak, U. Panten, J. P. Clement IV, G. Gonzalez, L. Aguilar-Bryan, and J. Bryan

I. Introduction	450
II. Drug Synthesis	451
III. Tissue Culture	456
IV. Transfection Protocols	456
V. Rubidium Efflux Assays	457
VI. Membrane Isolation	458
VII. Photolabeling Protocols	458
VIII. Receptor Solubilization	459
IX. Partial Purification of SUR1	459
X. Additional Purification Steps	460
XI. Sedimentation	461
XII. Binding Assays	461
References	463

22. Simplified Fast Pressure-Clamp Technique for Studying Mechanically Gated Channels

Don W. McBride, Jr. and Owen P. Hamill

I. Introduction	465
II. Mechanical Arrangement of Simplified Pressure Clamp	466
III. Electronic Control of Pressure Clamp	468
IV. Some Practical Tips for Construction	470
Appendix	472
References	472

23. Purification and Heterologous Expression of Inhibitory Glycine Receptors

Bodo Laube and Heinrich Betz

I. Introduction	474
II. Purification of Glycine Receptor from Mammalian Spinal Cord	474
III. Heterologous Expression of Glycine Receptor	476
IV. Transient Expression in HEK293 Cells	482
V. 2× BBS	484
VI. Baculovirus System	485
References	485

24. Functional Analyses of Aquaporin Water Channel Proteins

Peter Agre, John C. Mathai, Barbara L. Smith, and Gregory M. Preston

I. Introduction	488
II. Purification of Red Cell AQP1 Protein	488
III. Expression of AQP1 in Yeast	491
IV. Reconstitution of AQP1 into Proteoliposomes	492
V. Water Permeability of AQP1 Proteoliposomes	495
VI. Homology Cloning of Aquaporins by Degenerate Oligonucleotide PCR	497
VII. Water Permeability of AQP1 Expressed in Oocytes	503
References	507

PART X Toxins and Other Membrane Active Compounds

25. Conus Peptides as Probes for Ion Channels

J. Michael McIntosh, Baldomero M. Olivera, and Lourdes J. Cruz

I. Introduction	511
II. Biochemical Overview of Conus Peptides	512
III. Some Practical Considerations in Handling Conus Peptides	524
References	526

26. Scorpion Toxins as Tools for Studying Potassium Channels

*Maria L. Garcia, Markus Hanner, Hans-Günther Knaus, Robert Slaughter,
and Gregory J. Kaczorowski*

I. Introduction	529
II. Purification of Peptidyl Inhibitors of K ⁺ Channels from Scorpion Venoms	531
III. Synthesis of K ⁺ Channel Inhibitory Peptides by Recombinant Techniques	534
IV. Radiolabeling of K ⁺ Channel Inhibitory Peptides	537
V. Receptor Binding Studies	540
VI. Summary	542
References	542

27. Use of Planar Lipid Bilayer Membranes for Rapid Screening of Membrane-Active Compounds

Tajib A. Mirzabekov, Anatoly Y. Silberstein, and Bruce L. Kagan

I. Update	546
II. Introduction	547
III. A New Bilayer Membrane System	549
IV. Planar Lipid Membrane Setups and Chambers	549
V. Materials	552
VI. Applications for Perfusion Planar Lipid Membrane Technique	554
References	558

28. Antibodies to Ion Channels

Angela Vincent, Ian Hart, Ashwin Pinto, and F. Anne Stephenson

I. Introduction	561
II. Spontaneous Antibodies in Human Disease	566
III. Ligand-Gated Receptors	576
IV. Voltage-Gated Ion Channels	584
V. Commercial Products	585
References	586
