

CONTENTS

<i>Contributors</i>	xv
<i>Preface</i>	xxiii
<i>Volumes in Series</i>	xxv

Section I 1

1. Systems Biology Left and Right 3

Hans V. Westerhoff

1. A Fundamental Definition of Systems Biology	3
2. The Importance of the Integration of <i>In Vivo</i> and <i>In Vitro</i> Analyses	5
3. Alternative Definitions of Systems Biology	7
4. Different Types of Systems Biology	8
Acknowledgments	9
References	9

Section II. Machines For Systems Biology 13

2. Mass Spectrometry in Systems Biology: An Introduction 15

Warwick B. Dunn

1. Introduction	16
2. What is Mass Spectrometry?	16
3. Mass Spectrometer Configurations	17
4. The Benefits of Mass Spectrometry	30
5. Applications of Mass Spectrometry in Systems Biology	31
Acknowledgments	33
References	34

3. High-Throughput Quantification of Posttranslational Modifications *In Situ* by CA-FLIM 37

Hernán E. Grecco, Pedro Roda-Navarro, Sven Fengler, and
Philippe I. H. Bastiaens

1. Introduction	38
2. Methods	38
3. Results and Discussion	48

4. Conclusion: Why Use CA-FLIM?	50
References	57

4. Absorption Spectroscopy **59**

Sanjay M. Nilapwar, Maria Nardelli, Hans V. Westerhoff, and
Malkhey Verma

1. Introduction	60
2. Theory of Absorption Spectroscopy	60
3. Hardware	64
4. Applications of UV-Visible Spectrometry	66
5. Perspective	74
Acknowledgments	74
References	75

Section III. Nucleic Acids and Systems Biology **77**

5. A Strand-Specific Library Preparation Protocol for RNA Sequencing **79**

Tatiana Borodina, James Adjaye, and Marc Sultan

1. Introduction	80
2. ssRNA-Seq Protocol	83
References	97

6. Quantitative Real-Time PCR-Based Analysis of Gene Expression **99**

J. Jozefczuk and James Adjaye

1. Introduction	100
2. Primer Design	101
3. Primer Validation Experiments	101
4. Cell Culture-Based Isolation and Quantification of RNA	102
5. Reverse Transcription	103
References	109

Section IV. Protein Production and Quantification for Systems Biology **111**

7. Quantification of Proteins and Their Modifications Using QconCAT Technology **113**

Kathleen M. Carroll, Francesco Lanucara, and Claire E. Eyers

1. Introduction	114
2. Expression and Purification of QconCAT Proteins	119
3. Preparation of Samples for Analysis	123

4. Mass Spectrometric Analysis	126
5. Quantification of Posttranslational Modifications	128
6. Replicate Analysis—Biological Versus Technical Replicates	129
7. Summary and General Considerations	130
References	130
8. Mass Spectrometric-Based Quantitative Proteomics Using SILAC	133
Francesco Lanucara and Claire E. Eyers	
1. Introduction	134
2. SILAC: The Method	136
3. General SILAC Protocol	140
4. Applications	146
5. Conclusion	148
References	148
9. Nucleic Acid Programmable Protein Array: A Just-In-Time Multiplexed Protein Expression and Purification Platform	151
Ji Qiu and Joshua LaBaer	
1. Introduction	152
2. Overview of NAPPA Chemistry	154
3. Array Production	155
4. Detection of Protein Expression	160
Acknowledgments	162
References	162
10. Systems Biology of Recombinant Protein Production Using <i>Bacillus megaterium</i>	165
Rebekka Biedendieck, Claudia Borgmeier, Boyke Bunk, Simon Stammen, Christian Scherling, Friedhelm Meinhardt, Christoph Wittmann, and Dieter Jahn	
1. Introduction	166
2. Handling <i>B. megaterium</i>	167
3. Systems Biology of <i>B. megaterium</i>	184
Acknowledgements	191
References	192
11. Protein Production in <i>Saccharomyces cerevisiae</i> for Systems Biology Studies	197
Naglis Malys, Jill A. Wishart, Stephen G. Oliver, and John E. G. McCarthy	
1. Introduction	198
2. Comparison of Commonly Used Expression Systems	199

3. Comprehensive Libraries for Protein Production in <i>S. cerevisiae</i>	199
4. Protocols for Protein Expression and Purification from Tagged Collections of <i>S. cerevisiae</i>	202
5. Protein Analysis and Quantification	207
6. Protein Use in Proteomics and Enzyme Kinetics Measurements	209
7. Concluding Remarks	209
Acknowledgments	209
References	210

Section V. Enzymatic Assays in Systems Biology Research

213

12. Towards a Full Quantitative Description of Yeast Metabolism: A Systematic Approach for Estimating the Kinetic Parameters of Isoenzymes under *In vivo* like Conditions

215

Hanan L. Messiha, Naglis Malys, and Kathleen M. Carroll

1. Introduction	216
2. Enzyme Kinetics for Systems Biology	218
3. Production and Purification of Isoenzymes	219
4. General Protocol for Enzymatic Assays	220
5. Assays for Measuring the Activities of the Glycolytic Isoenzymes of <i>S. cerevisiae</i>	225
6. Concluding Remarks	229
Acknowledgments	229
References	229

13. Enzyme Kinetics for Systems Biology: When, Why and How

233

Malgorzata Adamczyk, Karen van Eunen, Barbara M. Bakker, and Hans V. Westerhoff

1. Enzyme Kinetics for Systems Biology: Five Variations on the Theme	234
2. Three System Biology Approaches that Use Different Enzyme Kinetics	240
3. Biological Material	244
4. Protocols	246
5. Perspectives	252
Acknowledgments	253
References	253

Section VI. Sample Preparation in Metabolic Studies	259
14. The Use of Continuous Culture in Systems Biology Investigations	261
Catherine L. Winder and Karin Lanthaler	
1. Introduction	262
2. Experimental Considerations	266
3. Operation of the Permittistat	270
4. Sampling of Biomass for Proteome and Metabolome Analyses	273
Acknowledgments	274
References	274
15. Sample Preparation Related to the Intracellular Metabolome of Yeast: Methods for Quenching, Extraction, and Metabolite Quantitation	277
Warwick B. Dunn and Catherine L. Winder	
1. Introduction	278
2. Sample Collection from Batch Cultures with Quenching of Intracellular Metabolism	280
3. Extraction of Polar and Nonpolar Metabolites from the Intracellular Metabolome	284
4. Targeted Quantification of Organic Acids Applying Gas Chromatography–Mass Spectrometry	288
Acknowledgments	295
References	295
16. Plant Metabolomics and Its Potential for Systems Biology Research: Background Concepts, Technology, and Methodology	299
J. William Allwood, Ric C. H. De Vos, Annick Moing, Catherine Deborde, Alexander Erban, Joachim Kopka, Royston Goodacre, and Robert D. Hall	
1. An Introduction to Plant Metabolomics	301
2. Considerations in Plant Growth and Preparation of Plant Material	305
3. GC-TOF/MS Metabolite Profiling, Recommended Experimental Reference Protocols, and Data Preprocessing Approaches	309
4. HPLC–PDA–QTOFMS Metabolite Profiling, Recommended Experimental Reference Protocols, and Data Preprocessing Approaches	314
5. ^1H NMR: Experimental Reference Protocols and Data Preprocessing for Plant Metabolite Profiling	317

6. Concluding Remarks	326
Acknowledgments	327
References	327
17. The Study of Mammalian Metabolism through NMR-based Metabolomics	337
Reza Salek, Kian-Kai Cheng, and Julian Griffin	
1. Introduction	338
2. Tissue Extraction	339
3. Analysis of Biofluids by NMR Spectroscopy	343
4. A Brief Overview of Directly Measuring Metabolites in Mammalian Tissues by High-Resolution Magic Angle Spinning ^1H NMR Spectroscopy	346
5. Data Processing	349
6. Conclusions	350
Acknowledgments	350
References	350
Section VII. Mathematical Modelling in Systems Biology	353
18. Building a Kinetic Model of Trehalose Biosynthesis in <i>Saccharomyces cerevisiae</i>	355
Kieran Smallbone, Naglis Malys, Hanan L. Messiha, Jill A. Wishart, and Evangelos Simeonidis	
1. Introduction	356
2. Biological Background	357
3. Model Development	363
4. Results	366
5. Discussion	367
Acknowledgments	368
References	368
19. Sustainable Model Building: The Role of Standards and Biological Semantics	371
Falko Krause, Marvin Schulz, Neil Swainston, and Wolfram Liebermeister	
1. Sustainable Model Building	372
2. How to Create Reusable Models	373
3. How to Implement Models in Standard Formats	375
4. How to Document and Annotate Models	379
5. Tools for Model Building and Annotation	382

6. How to Create and Draw a Simple Model	388
7. Annotations in Genome-Scale Network Reconstructions	389
Acknowledgments	392
References	393
20. From Reaction Networks to Information Flow—Using Modular Response Analysis to Track Information in Signaling Networks	397
Pascal Schulthess and Nils Blüthgen	
1. Introduction	398
2. Modular Response Analysis	399
3. Conservation Analysis	402
4. From Reaction Schemes to Influence Networks Using a Monte Carlo Approach	404
5. Conclusion	408
Acknowledgments	408
References	409
21. Whole-Genome Metabolic Network Reconstruction and Constraint-Based Modeling	411
Charles R. Haggart, Jennifer A. Bartell, Jeffrey J. Saucerman, and Jason A. Papin	
1. Introduction	412
2. Metabolic Network Reconstruction	413
3. Constraint-Based Modeling Methods	420
4. Summary	430
Acknowledgments	431
References	431
Section VIII. Understanding Systems Biology	435
22. Hands-on Metabolism: Analysis of Complex Biochemical Networks Using Elementary Flux Modes	437
Sascha Schäubel, Stefan Schuster, and Christoph Kaleta	
1. Introduction	438
2. Elementary Flux Modes	438
3. Application	443
4. Conclusion	452
Acknowledgments	452
References	454

23. How to Obtain True and Accurate Rate-Values	457
Sef J. Heijnen and Peter J. T. Verheijen	
1. Introduction	458
2. Quantification of Broth Amount in the Cultivation Vessel	459
3. Forgotten Processes	467
4. Detecting Forgotten Processes and Systematic Errors	473
5. Propagation of Statistical Errors: Accuracy of Calculated Rates	482
6. Experimental Design to Obtain True and Accurate <i>R</i> -Values	486
7. Mathematics of Reconciliation	502
8. Conclusion	507
References	508
24. A Practical Guide to Genome-Scale Metabolic Models and Their Analysis	509
Filipe Santos, Joost Boele, and Bas Teusink	
1. Introduction	510
2. Genome-Scale Metabolic Models: Their Place in the Spectrum of Modeling Options	514
3. The Art of Making Genome-Scale Metabolic Models	520
4. Applications of Genome-Scale Metabolic Models	523
References	528
25. Supply–Demand Analysis: A Framework for Exploring the Regulatory Design of Metabolism	533
Jan-Hendrik S. Hofmeyr and Johann M. Rohwer	
1. Introduction	534
2. The Functional Organization of Metabolism	535
3. Quantitative Analysis of Supply–Demand Systems	535
4. Generalized Supply–Demand Analysis	542
5. Experimental Applications of Supply–Demand Analysis	549
Acknowledgment	552
References	552
26. Modular Kinetic Analysis	555
Klaas Krab	
1. Introduction	555
2. Description of the Method	560
3. Applications	566
Acknowledgments	568
References	568

27. Quantitative Analysis of Flux Regulation Through Hierarchical Regulation Analysis	571
Karen van Eunen, Sergio Rossell, Jildau Bouwman, Hans V. Westerhoff, and Barbara M. Bakker	
1. Introduction	572
2. Theory of Regulation Analysis	576
3. Experimental Tools for Regulation Analysis	582
4. Strategies of Flux Regulation	584
5. Concluding Remarks	591
References	591
28. Origins of Stochastic Intracellular Processes and Consequences for Cell-to-Cell Variability and Cellular Survival Strategies	597
A. Schwabe, M. Dobrzyński, K. Rybakova, P. Verschure, and F. J. Bruggeman	
1. Cell-to-Cell Heterogeneity and Measurement Techniques	598
2. Theoretical Insights and Experimental Evidence	600
3. Beneficial and Detrimental Effects of Molecular Noise	615
4. Conclusion	620
Acknowledgments	621
References	621
Section IX. Managing Systems Biology Data, Models and Research	627
29. The SEEK: A Platform for Sharing Data and Models in Systems Biology	629
Katy Wolstencroft, Stuart Owen, Franco du Preez, Olga Krebs, Wolfgang Mueller, Carole Goble, and Jacob L. Snoep	
1. Introduction	630
2. The SEEK Platform	632
3. The Challenges of Data Management	636
4. The JERM Infrastructure	641
5. The SEEK Functionalities: Annotating and Linking Assets	645
6. Incentives for Sharing Data	650
7. The SEEK: Experiences	652
Acknowledgments	654
References	654

30. Crossing the Boundaries: Delivering Trans-disciplinary Science in a Disciplinary World	657
Elizabeth A. Elliot and Neil W. Hayes	
1. Introduction	658
2. Theoretical Management Strategies	659
3. Consideration of Real-World Examples	662
4. Conclusions	670
Acknowledgments	671
References	671
