

CONTENTS

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xvii</i>
<i>Volumes in Series</i>	<i>xix</i>

1. Intracellular Production of Recombinant Serpins in Yeast **1**

Dion Kaiserman, Corinne Hitchen, Vita Levina, Stephen P. Bottomley,
and Phillip I. Bird

1. Introduction	1
2. Selection of Strain and Expression Plasmid	2
3. Growth of Yeast	3
4. Transformation of Yeast	4
5. Screening Transformants	4
6. Large-Scale Growth and Induction	5
7. Lysis	6
8. Purification	7
9. Assessing Serpin Activity and Removing Inactive Forms	9
10. Production of Polymerogenic Serpins	10
References	12

2. Production of Recombinant Serpins in *Escherichia coli* **13**

Mary C. Pearce and Lisa D. Cabrita

1. Introduction	14
2. Experimental Procedures for the Production of Serpins in <i>E. coli</i>	20
3. Some Common Variations Used for Expression of Other Serpins	21
4. Preparation of AT from Inclusion Bodies	23
5. Preparation of Soluble AT	24
References	27

3. Isolation and Characterization of the Nuclear Serpin MENT **29**

Sergei Grigoryev and Sheena McGowan

1. Introduction	30
2. Purification of the MENT Protein	31
3. Protease Inhibition/Serpin Activity	34

4. MENT Interaction with DNA and Chromatin <i>In Vitro</i>	36
5. Analysis of MENT Association with Native Chromatin <i>In Situ</i>	42
Acknowledgments	46
References	46
4. Solving Serpin Crystal Structures	49
Randy J. Read, Aiwu Zhou, and Penelope E. Stein	
1. Introduction	50
2. Protein Production and Purification	50
3. Modifications to Aid Crystallization	51
4. Crystallization	51
5. Experimental Phasing	52
6. Molecular Replacement	53
7. Phase Improvement by Density Modification	57
8. Refinement and Validation	58
References	59
5. Crystallography of Serpins and Serpin Complexes	63
M. A. Dunstone and James C. Whisstock	
1. Introduction	64
2. First Glimpses of Serpin Structures	64
3. The Serpin-Enzyme Complex	64
4. The Michaelis Complex	76
5. Conformational Control of Serpins—Antithrombin and Heparin	77
6. Nonconventional Serpin Complexes	77
7. Conformational Change and the Formation of the Latent Conformation	78
8. Abnormal Conformational Change—The δ -Form	79
9. Serpin Polymers	79
10. Crystallization of Serpins and Serpin Complexes	81
11. Conclusions	82
References	82
6. Serpins as Hormone Carriers: Modulation of Release	89
Robin Carrell, Xiaoqiang Qi, and Aiwu Zhou	
1. Serpins and Allosteric Modulation	89
2. Hormone Carriage—TBG and CBG	90
3. Temperature Response: A Protein Thermocouple	95
4. Angiotensinogen and Its Interaction with Renin	96
Acknowledgments	100
References	101

7. Serpin-Glycosaminoglycan Interactions	105
Chantelle M. Rein, Umesh R. Desai, and Frank C. Church	
1. Quantitative Methods	106
2. Qualitative Methods	121
3. Animal Models	127
Acknowledgments	131
References	131
8. Targeting Serpins in High-Throughput and Structure-Based Drug Design	139
Yi-Pin Chang, Ravi Mahadeva, Anathe O. M. Patschull, Irene Nobeli, Ugo I. Ekeowa, Adam R. McKay, Konstantinos Thalassinou, James A. Irving, Imran Haq, Mun Peak Nyon, John Christodoulou, Adriana Ordóñez, Elena Miranda, and Bibek Gooptu	
1. Introduction	140
2. Targeting the s4A Site with Peptides in a Pathogenic Variant of α_1 -antitrypsin	142
3. Computational Approaches	148
4. <i>In vitro</i> Screening of Small Molecules	155
5. Mammalian Cell Models and Beyond	166
6. Conclusion	168
References	169
9. Development of Inhibitors of Plasminogen Activator Inhibitor-1	177
Shih-Hon Li and Daniel A. Lawrence	
1. Introduction	178
2. Serpins as Drug Targets	179
3. Development of PAI-1 Inhibitors	184
4. Concluding Remarks	200
References	200
10. Bioinformatic Approaches for the Identification of Serpin Genes with Multiple Reactive Site Loop Coding Exons	209
Stefan Börner and Hermann Ragg	
1. Introduction	210
2. Procedure for Identification of Serpin Genes with mRSL Cassette Exons	211
3. Conclusion	219
Acknowledgment	220
References	220

11. Methods to Measure the Kinetics of Protease Inhibition by Serpins	223
Anita J. Horvath, Bernadine G. C. Lu, Robert N. Pike, and Stephen P. Bottomley	
1. Introduction	223
2. Determining the Rate of Protease Inhibition (k_a)	226
3. Efficiency of the Serpin Inhibitory Reaction	230
Acknowledgments	233
References	233
12. Predicting Serpin/Protease Interactions	237
Jiangning Song, Antony Y. Matthews, Cyril F. Reboul, Dion Kaiserman, Robert N. Pike, Phillip I. Bird, and James C. Whisstock	
1. Introduction	238
2. Phage Display Methods	242
3. Sequence Analysis Methods	256
4. Concluding Remarks and Perspective	269
Acknowledgments	270
References	270
13. Amino-Terminal Oriented Mass Spectrometry of Substrates (ATOMS): N-Terminal Sequencing of Proteins and Proteolytic Cleavage Sites by Quantitative Mass Spectrometry	275
Alain Doucet and Christopher M. Overall	
1. Introduction	276
2. Overview of ATOMS	277
3. Control Experiment to Determine the Ratio Cutoff and Identify Natural N-Termini, Basal Proteolytic Products, and Outliers	281
4. Limited Proteolytic Processing of the Target Protein by the Test Protease <i>In Vitro</i>	282
5. Isotopic Labeling and Tryptic Digestion	283
6. Identification of Peptides by Liquid Chromatography-Tandem Mass Spectrometry	286
7. Mass Spectrometry Data Analysis	287
8. Discussion: Measuring the Effect of Protease Inhibitors on the Generation of Proteolytic Fragments	291
Acknowledgments	292
References	292

14. Computational Methods for Studying Serpin Conformational Change and Structural Plasticity	295
Itamar Kass, Cyril F. Reboul, and Ashley M. Buckle	
1. Introduction	296
2. Local to Global Dynamics Simulations	299
3. Pushing the Limits—Improving Conformational Sampling	304
4. I Know Where to Go—Directed Simulations	307
5. Nondynamical Methods	308
6. Software	309
7. Force Fields	311
8. Hardware	313
9. Case Study	314
10. Outlook	316
References	319
15. Probing Serpin Conformational Change Using Mass Spectrometry and Related Methods	325
Yuko Tsutsui, Anindya Sarkar, and Patrick L. Wintrod	
1. Introduction	326
2. Applications of HXMS	331
3. Determination of Thermodynamic Stability Using Hydrogen–Deuterium Exchange Combined with Mass Spectrometry	336
4. “Functional Unfolding” During the Native → Cleaved Transition	343
5. Investigating the Polymerization Pathway and Polymer Structure of α_1 -AT by HXMS and Ion Mobility MS	344
6. Future Prospects	348
References	348
16. Determining Serpin Conformational Distributions with Single Molecule Fluorescence	351
Nicole Mushero and Anne Gershenson	
1. Introduction	353
2. Labeling Serpins and Proteases with Fluorophores	354
3. Overview of Single Molecule Fluorescence Techniques	355
4. Serpin Polymerization	358
5. Conformational Distributions of Protease–Serpine Complexes	368
6. Conclusions and Future Directions	373
Acknowledgments	373
References	374

17. Serpin Polymerization <i>In Vitro</i>	379
James A. Huntington and Masayuki Yamasaki	
1. Introduction	380
2. Methods of Inducing Polymerization	383
3. Kinetics of Polymerization	395
4. Effect of Mutations and "Drugs" on Polymerization	402
5. Mechanisms of Polymerization	408
6. Conclusions	415
Acknowledgments	416
References	417
18. The Serpinopathies: Studying Serpin Polymerization <i>In Vivo</i>	421
James A. Irving, Ugo I. Ekeowa, Didier Belorgey, Imran Haq, Bibek Gooptu, Elena Miranda, Juan Pérez, Benoit D. Roussel, Adriana Ordóñez, Lucy E. Dalton, Sally E. Thomas, Stefan J. Marciniak, Helen Parfrey, Edwin R. Chilvers, Jeffrey H. Teckman, Sam Alam, Ravi Mahadeva, S. Tamir Rashid, Ludovic Vallier, and David A. Lomas	
1. Introduction to Serpin Polymers and the Serpinopathies—David Lomas	423
2. Biophysical Techniques to Assess Serpin Polymers Formed <i>In Vivo</i> —James Irving, Ugo Ekeowa, Didier Belorgey, and Imran Haq	424
3. Assessment of Serpin Polymers by Electron Microscopy—Bibek Gooptu	428
4. Development of mAbs to Aberrant Conformers of α_1 -Antitrypsin and Neuroserpin—Elena Miranda and Juan Pérez	436
5. Development of Cell Models to Assess the Polymerization of Antitrypsin—Adriana Ordóñez	441
6. Development of Cell Models to Assess the Polymerization of Neuroserpin—Elena Miranda, Juan Perez, and Benoit Roussel	443
7. Detection of the UPR and the OPR in the Serpinopathies—Lucy Dalton, Sally Thomas, Benoit Roussel, and Stefan Marciniak	445
8. Characterization of the Interaction Between Serpin Polymers and Neutrophils—Helen Parfrey and Edwin Chilvers	448
9. The Use of Transgenic Mice to Assess the Hepatic Consequences of Serpin Polymerization. Jeff Teckman	451
10. The Use of Transgenic Mice to Assess the Pulmonary Consequences of Serpin Polymerization—Sam Alam and Ravi Mahadeva	453
11. Characterization of Serpin Polymerization Using iPS to Generate Hepatocyte-Like Cell Lines—Tamir Rashid and Ludovic Vallier	457
Acknowledgments	461
References	461
