vii

1. New Insights into the Mechanisms of Cyto motive Actin and Tubulin Filaments	1
Christopher H.S. Aylett, Jan Löwe, and Linda A. Amos	
1. Introduction	2
2. Mechanisms of Directed Movement	3
3. The Tubulin/FtsZ Family	6
4. The Actin Family	42
5. Concluding Remarks and Future Directions	56
Acknowledgments	58
References	59
2. New Insights into the Role of Mitochondria-Associated Endoplasmic Reticulum Membrane	73
Michiko Fujimoto and Teruo Hayashi	
1. Introduction	74
2. Structural and Functional Heterogeneity of the ER	75
3. The Structure of the MAM	78
4. Components of the MAM	87
5. Function of the MAM	93
6. Significance of the MAM in Cell Physiology and Disease	100
7. Concluding Remarks	104
Acknowledgments	105
References	105
3. Strategies for Silencing and Escape: The Ancient Struggle Between Transposable Elements and Their Hosts	119
Damon Lisch and R. Keith Slotkin	
1. Introduction	120
2. Basic Description of Types of TEs	121
3. Overview of TE Distributions	123
4. Mechanisms of TE Silencing	124

5. Strategies of Evasion	135
6. Conclusion: The Semiautonomous Genome	143
References	144
4. Current Progress and Potential Practical Application for Human Pluripotent Stem Cells	153
Elena S. Philonenko, Maria V. Shutova, Ilya V. Chestkov, Maria A. Lagarkova, and Sergey L. Kiselev	
1. Introduction	154
2. Biology of Pluripotent Stem Cells	155
3. Induced Pluripotent Stem Cells	164
4. Biomedical Potential of Human Pluripotent Stem Cells	175
5. Concluding Remarks	186
References	186
5. Protein Quality Control, Retention, and Degradation at the Endoplasmic Reticulum	197
Ron Benyair, Efrat Ron, and Gerardo Z. Lederkremer	
1. Introduction	199
2. ER Retention	199
3. Chaperones	206
4. CNX Cycle	215
5. Mannosidases and Lectins	218
6. Compartmentalization	227
7. Retrotranslocation	234
8. ERAD	239
9. ER Stress	246
10. Concluding Remarks	252
Acknowledgment	253
References	253
