1. Circulating Fibrocytes—Biology and Mechanisms in Wound Healing and Scar Formation	1
Gerrit Grieb, Guy Steffens, Norbert Pallua, Jürgen Bernhagen, and Richard Bucala	
1. Introduction	2
2. Fibrocytes in Wound Healing	3
3. Fibrocytes and Hypertrophic Scarring	8
4. Conclusions	14
Acknowledgments	15
References	15
2. New Insights into the Mechanism of Wnt Signaling Pathway Activation	21
Akira Kikuchi, Hideki Yamamoto, Akira Sato, and Shinji Matsumoto	
1. Introduction	22
2. Wnt Regulates Multiple Pathways	24
3. Wnt Proteins Have Unique Properties	26
4. Cell-Surface Receptors Function in a Context-Specific Manner	32
5. How Do Multiple Wnts Activate a Specific Pathway Selectively?	43
6. Cross Talk Between Wnt Signaling Pathway and Other Pathways	52
7. Concluding Remarks and Future Perspectives	58
Acknowledgments	60
References	60
3. Role of Intercompartmental DNA Transfer in Producing Genetic Diversity	73
Dario Leister and Tatjana Kleine	
1. Introduction	74
2. Gene Transfer from Organelles to the Nucleus	75
3. DNA Transfer to Organelles	87

4. Transfer of Nonfunctional orgDNA Segments to the Nucleus: NUMTs and NUPTs	92
5. Mechanism of orgDNA Integration into the Nuclear Genome	99
6. Concluding Remarks	103
References	103
 4. Structure, Regulation, and Evolution of the Plastid Division Machinery	 115
Shin-ya Miyagishima, Hiromitsu Nakanishi, and Yukihiro Kabeya	
1. Introduction	116
2. Timing and Mode of Plastid Division	118
3. Structural and Molecular Mechanisms of Plastid Division	120
4. Evolution and Diversity of the Plastid Division Machinery	133
5. Regulation of Plastid Division	141
6. Concluding Remarks	145
Acknowledgments	146
References	146
 5. Reprogramming Mediated by Cell Fusion Technology	 155
Oleg L. Serov, Natalia M. Matveeva, and Anna A. Khabarova	
1. Introduction	156
2. Historical Review of EC Cell Fusion-Mediated Reprogramming	157
3. Key Characteristics of ES Cell-Somatic Cell Hybrids	161
4. Epigenetic Events Accompanying Reprogramming in ES Cell-Somatic Cell Hybrids	170
5. Reprogramming is Initiated in Heterokaryons	172
6. Factors Determining the Direction of Reprogramming	179
7. Concluding Remarks	182
References	183
 6. New Insights into the Characteristics of Sweet and Bitter Taste Receptors	 191
Piero A. Temussi	
1. Introduction	192
2. Taste Receptors	193
3. Mechanisms of Interaction of Sweet Molecules	199
4. Relationships Among Receptors	216
5. Conclusions	219
Acknowledgment	220
References	220

7. Cell-Cycle Control and Plant Development	227
Soichi Inagaki and Masaaki Umeda	
1. Introduction	228
2. Basic Regulatory Mechanisms of the Cell Cycle	229
3. Endocycle	239
4. Regulation of the Cell Cycle by Internal and External Stimuli	244
5. Concluding Remarks	251
Acknowledgments	251
References	251
Index	263
