Determinants of Density–Body Size Scaling Within Food Webs and Tools for Their Detection

MATÍAS ARIM, MAURO BERAZATEGUI,
JUAN M. BARRENECHE, LUCIA ZIEGLER,
MATÍAS ZARUCKI AND SEBASTIAN R. ABADES

Abstract	2
I. Introduction.	2
II. Density–Mass from Different Angles	4
III. DMR and Food Webs	6
A. Trophic Position.	6
B. Gape Limitation and DMR.	7
C. Discontinuities and the DMR	14
IV. Statistical Issues	15
A. Frequency Distribution.	15
B. Bivariate Relationships	18
C. Multiple DMR in the Same Dataset	21
V. DMR and Its Detection in a Metacommunity	22
A. Study System	25
B. Five DMRs in a Single System.	25
C. Cross-Community at Different Levels.	27
D. Amphibians as an Example of Discontinuous DMR	27
E. Evaluation of Methodological Performance	29
VI. Conclusions	30
Acknowledgements	31
References.	31

**Predicted Effects of Behavioural Movement and Passive
Transport on Individual Growth and Community Size
Structure in Marine Ecosystems**

MATTHEW D. CASTLE, JULIA L. BLANCHARD
AND SIMON JENNINGS

Abstract	42
I. Introduction	42
II. Methods	44
A. Model Development	44
B. Growth and Mortality	45
C. Spatial Flux	48
D. Numerical Solution	49
E. Parameter Choices	50
F. Simulations	50
G. Data	52
III. Results	53
A. Consequences of Behavioural Movement on Size Spectra	53
B. Life Histories	54
C. Parameter Sensitivities	55
D. Consequences of Adding Abiotic Movement	57
E. Effects of Simulated Phytoplankton Bloom	59
F. Data	60
IV. Discussion	61
Acknowledgements	63
References	63

**Seeing Double: Size-Based and Taxonomic Views of Food
Web Structure**

DAVID GILLJAM, AARON THIERRY,
FRANCOIS K. EDWARDS, DAVID FIGUEROA,
ANTON T. IBBOTSON, J. IWAN JONES,
RASMUS B. LAURIDSEN, OWEN L. PETCHEY,
GUY WOODWARD AND BO EBENMAN

Abstract	68
I. Introduction	68
A. The Allometry of Trophic Relations	69
B. Overcoming Pitfalls Through a Plurality of Viewpoints	71
C. Individual-Based Food Webs: An Emerging Field	72
II. Methods	74
A. Study Sites—The Seven Food Webs	76

B.	Aggregation into Different Levels of Resolution and Groupings	79
C.	Response Variables Analysed	82
D.	Statistical Analyses	88
III.	Results	89
A.	Response Variables Compared	89
IV.	Discussion.	99
A.	Individuals and Species Averages—Effects of Resolution. . .	99
B.	Taxonomy Versus Size—Effects of Grouping	106
C.	Dynamic Implications—Parameterisation of Dynamic Food Web Models.	108
D.	Caveats.	110
E.	Future Directions	111
F.	Concluding Remarks	113
	Acknowledgements	113
	Appendix I. Supplementary Figures	114
	Appendix II. Details on Regression Models	117
	References	127

Body Size, Life History and the Structure of Host–Parasitoid Networks

DOMINIC C. HENRI AND F.J. FRANK VAN VEEN

	Abstract	136
I.	An Introduction to Ecological Network Theory and Host–Parasitoid Networks	137
A.	Ecological Networks and Their Role in Ecology.	137
B.	Host–Parasitoid Networks	138
C.	The Importance of Host–Parasitoid Networks in Ecological Research.	141
D.	The Aims of This Review	143
II.	The Structuring of Trophic Networks	143
A.	What is Network Structure and How is it Determined? . . .	143
B.	Body Size as a Determinant of Food-Web Structure.	145
C.	The Structure of Host–Parasitoid Networks.	147
III.	Limitations on Host Range	148
A.	Fundamental Niches in Host–Parasitoid Networks.	148
B.	The Role of Phylogeny in Host–Parasitoid Network Structure	148
IV.	Life History and Host Range	149
A.	Egg Placement	149
B.	Developmental Diapause	150

V.	Realised Niche in Parasitoids	151
A.	Optimal Foraging	151
B.	Maximising Host Encounter Rate.	151
C.	Host Quality and Offspring Fitness	153
D.	The Optimal Foraging Strategy	155
VI.	Parasitoid Life History and Host Electivity	156
A.	Time and Egg-Limitation	156
B.	The Cost of Egg or Time Limitation	156
C.	Egg-Limitation, Life History and Electivity	157
D.	Time Limitation, Life History and Electivity	160
E.	Handling Time and Life History in Parasitoids	162
VII.	Sex Allocation and Host Quality	163
A.	The Sex Allocation Process	163
B.	Allocation Strategies and Parasitoid Life History	164
C.	Sex Allocation and Network Structure	164
VIII.	Conclusions	166
A.	The Determinants of Fundamental Niche	166
B.	The Determinants of Realised Niche.	169
C.	Future Research Avenues and the Effect of Spatio-Temporal Variation in Host-Parasitoid Networks .	172
	Acknowledgements	174

Eco-evolutionary Dynamics of Individual-Based Food Webs

CARLOS J. MELIÁN, CÉSAR VILAS, FRANCISCO BALDÓ,
ENRIQUE GONZÁLEZ-ORTEGÓN, PILAR DRAKE
AND RICHARD J. WILLIAMS

	Abstract	226
I.	Introduction	226
II.	Material and Methods	229
A.	The Models.	229
B.	Study Area and Sampling Methods of a Large Individual-Based Food Web	239
III.	Results	246
A.	Sampling Effects in Individual-Based Food Webs	246
B.	Spatio-Temporal Patterns of Individual Rank in Connectivity	253
C.	Effect of Total Length on Intraspecific Variance in Prey Consumption	256
D.	Expectations from Genetic and Ecological Drift to Study Diversity in Individual-Based Food Webs	257
E.	Effect of Intraspecific Variability on Species Level Food Web Connectance	259
IV.	Summary and Discussion	259
A.	Models of Eco-evolutionary Dynamics as a General Framework	259
B.	Perspective	263
	Acknowledgements	264
	References	264

Scale Dependence of Predator–Prey Mass Ratio: Determinants and Applications

TAKEFUMI NAKAZAWA, MASAYUKI USHIO AND
MICHIO KONDOH

Abstract	270
I. Introduction	270
A. Size Matters to Food Webs	270
B. Predator–Prey Mass Ratio: Its Use and Problems	271
C. Goal of the Present Study	276
II. Data	276
III. Scale Dependence of Predator–Prey Mass Ratio	278
A. Methods and Results	278
B. Mechanisms	279
C. Application	283
IV. Determinants of Predator–Prey Mass Ratio	283
A. Statistical Analysis	283
B. Results	284
C. Application	288
V. Perspectives	290
A. Other Determinants of Predator–Prey Mass Ratio	290
B. Functional Response	293
C. Food-Web Modelling	296
VI. Conclusion	298
References	299
Index	303
Cumulative List of Titles	311
