1. From Pluripotency to Islets: miRNAs as Critical Regulators of Human Cellular Differentiation	1
Andrew Hinton, Shaun Hunter, Gloria Reyes, Gary B. Fogel, and Charles C. King	
I. Introduction	2
II. miRNAs and ESCs	4
III. miRNAs and ESC Pluripotency	4
IV. miRNAs that Regulate Early Cell Fate Decisions in hESC	10
V. miRNAs that Regulate Endoderm and Pancreatic Precursor Formation	15
VI. miRNAs that Regulate Pancreatic Endocrine Cell Function	19
VII. Conclusions and Future Directions	24
Acknowledgments	25
References	25
 2. The Genetics of Dystonias	 35
Mark S. LeDoux	
I. Introduction	36
II. Clinical Features	38
III. Primary Dystonia	45
IV. Dystonia Plus	55
V. Heredodegenerative Dystonia	60
VI. Dystonia in Association with other Neurogenetic Disorders	62
VII. Conclusions	73
Acknowledgments	74
References	74
 3. Exome Sequencing and Advances in Crop Improvements	 87
Devi Singh, Pankaj K. Singh, Sarika Chaudhary, Kamiya Mehla and Shashi Kumar	
I. Introduction	88
II. Sequencing: Tools and Techniques	89
III. Exome Sequencing for Crop Improvement	100

IV. Crop Improvement Beyond Exome Sequencing	108
V. Conclusions	113
Competing Interests	114
Acknowledgments	114
Abbreviations	114
References	114
4. Applications of Functional Protein Microarrays in Basic and Clinical Research	123
Heng Zhu, Jiang Qian	
I. Introduction	124
II. Fabrication of Functional Protein Microarrays	126
III. Signal Detection	132
IV. Applications of Functional Protein Microarrays	136
V. Outlook	149
Acknowledgements	150
References	150
