Preface

xiii

Section 1: Historical, Ecological and Evolutionary Considerations

1. Bacteriophage Electron Microscopy	1
Hans-W. Ackermann	
I. Introduction	2
II. Electron Microscopy and the Nature of Phages	3
III. Studying the Virion	5
IV. Studying Phage Life	12
V. Phage Classification and Novel Viruses	15
VI. Phage Ecology	20
VII. Conclusions	22
References	26
2. Postcards from the Edge: Structural Genomics of Archaeal Viruses	33
Mart Krupovic, Malcolm F. White, Patrick Forterre, and David Prangishvili	
I. Introduction	35
II. Genomics of Archaeal Viruses	35
III. Structural Genomics and Archaeal Viruses	40
IV. Concluding Remarks	57
Acknowledgments	58
References	58
3. Sputnik, a Virophage Infecting the Viral Domain of Life	63
Christelle Desnues, Mickaël Boyer, and Didier Raoult	
I. The Mimiviridae Family and the History of Sputnik	65
II. Sputnik Structure: Morphology, Chemical Composition, and Protein Components	69
III. Life Cycle: Host Cells, Entry, Uncoating, DNA Replication, Transcription, Translation, Assembly, Maturation, and Release	71

IV. Genomics: Gene Content, Specific Genes, Laterally Transferred Genes, ORFans, Gene Expression, and Metagenomics	73
V. Virophage vs Satellite Virus	80
VI. Giant Viruses, Virophages, and the Fourth Domain of Life	83
Acknowledgment	85
References	85

Section 2: Genomics and Molecular Biology

4. Bacteriophage-Encoded Bacterial Virulence Factors and Phage–Pathogenicity Island Interactions	91
E. Fidelma Boyd	
I. General Background	92
II. Phage-Encoded Effector Proteins (EPs)	93
III. Survival in Eukaryotic Host Cells	102
IV. Attachment to Host Eukaryotic Cells	103
V. Evasion of Host Immune Cells	103
VI. Extracellular Toxins	105
Acknowledgments	112
References	112
5. Structure, Assembly, and DNA Packaging of the Bacteriophage T4 Head	119
Lindsay W. Black and Venigalla B. Rao	
I. Introduction	121
II. Structure and Assembly of Phage T4 Capsid	121
III. Structure of the Phage T4 Head	126
IV. Display on Capsid using Hoc and Soc Proteins	129
V. Packaging Proteins	133
VI. Packaging Motor	139
VII. Conclusions and Prospects	147
Acknowledgments	147
References	147
6. Phage λ—New Insights into Regulatory Circuits	155
Grzegorz Węgrzyn, Katarzyna Licznarska, and Alicja Węgrzyn	
I. Introduction: The Bacteriophage λ Paradigm	156
II. Ejection of λ DNA from Virion into the Host Cell	158
III. The Lysis-Versus-Lysogenization Decision and λ DNA Integration into Host Chromosome	158

IV. Prophage Maintenance and Induction	162
V. Phage λ DNA Replication	165
VI. General Recombination System Encoded by λ	169
VII. Transcription Antitermination	170
VIII. Formation of Mature Progeny Virions	171
IX. Host Cell Lysis	171
X. Concluding Remarks	172
Acknowledgment	173
References	173

7. The Secret Lives of Mycobacteriophages **179**

Graham F. Hatfull

I. Introduction	180
II. The Mycobacteriophage Genomic Landscape	182
III. Phages of Individual Clusters, Subclusters, and Singletons	192
IV. Mycobacteriophage Evolution: How Did They Get To Be The Way They Are?	242
V. Establishment and Maintenance of Lysogeny	247
VI. Mycobacteriophage Functions Associated with Lytic Growth	260
VII. Genetic and Clinical Applications of Mycobacteriophages	268
VIII. Future Directions	276
Acknowledgments	278
References	278

Section 3: Interaction of Phages with Their Hosts

8. Role of CRISPR/*cas* System in the Development of Bacteriophage Resistance **289**

Agnieszka Szczepankowska

I. General Background	291
II. Organization of CRISPR Loci in Prokaryotic Organisms	291
III. Biological Role of CRISPR/ <i>cas</i> Systems	301
IV. Mechanism of CRISPR/ <i>cas</i> -Conferred Phage Resistance	303
V. Additional Roles of CRISPR/ <i>cas</i> Systems	319
VI. CRISPR/ <i>cas</i> Systems in Various Microbial Species	321
VII. Application Potential of CRISPR/ <i>cas</i> Systems	325
VIII. Role of CRISPR/ <i>cas</i> Systems in Host:Phage Evolution	328
References	332

9. Pseudolysogeny	339
Marcin Łoś and Grzegorz Węgrzyn	
I. Introduction	340
II. Current Definitions of Pseudolysogeny	342
III. Examples of Pseudolysogeny	345
IV. Future Prospects	347
Acknowledgments	347
References	347
10. Role of Host Factors in Bacteriophage ϕ29 DNA Replication	351
Daniel Muñoz-Espín, Gemma Serrano-Heras, and Margarita Salas	
I. ϕ 29 Protein-Primed Mode of DNA Replication	353
II. Phage ϕ 29 Uses Bacterial DNA Gyrase	360
III. The MreB Cytoskeleton Organizes ϕ 29 DNA Replication	362
IV. ϕ 29 Protein p56 Inhibits Uracil–DNA Glycosylase	367
V. Conclusions and Perspectives	375
Acknowledgments	376
References	376
