vii

1. Phage Therapy Pharmacology: Phage Cocktails 1

Benjamin K. Chan and Stephen T. Abedon

I. Introduction 2

II. Phage Therapy and Pharmacology 3

III. Combination Therapy 8

IV. Cocktail-related Terms 10

V. Monovalence, Polyvalence, and Phage Host Range 13

VI. Phage Banks 14

VII. Limitations on Cocktail Utility 17

VIII. Conclusion 19

References 20

2. Utility of Greater Wax Moth Larva (*Galleria mellonella*) for Evaluating the Toxicity and Efficacy of New Antimicrobial Agents 25

Andrew P. Desbois and Peter J. Coote

I. Introduction 26

II. Use of the Wax Moth Larva Infection Model for Studying Human Pathogens 30

III. Use of the Wax Moth Larva Model for Evaluating Antimicrobial Agents 34

IV. Future Prospects of the Wax Moth Model and its Integration into the Antimicrobial Drug Discovery and Development Pathway 46

V. Concluding Remarks 48

Acknowledgments 49

References 49

3. Bacteriophages and Nanostructured Materials 55

Paul Hyman

I. Introduction 56

II. Bacteriophage Structure—A Primer 57

III. Filamentous Bacteriophages as the Basis of Nanowires and Other Materials 58

IV. Bacteriophages and Bacteriophage Components as Sensors 63

V. Competing Technologies	67
VI. Conclusions	68
Acknowledgments	69
References	69
4. Microbial Communities Associated with House Dust	75
Helena Rintala, Miia Pitkäranta, and Martin Täubel	
I. Introduction	76
II. Development of Microbial Assemblages in House Dust	79
III. Microbial Diversity in House Dust	91
IV. Factors Affecting the Indoor Dust Microbial Flora	106
V. Conclusions	111
References	111
5. <i>Serpula lacrymans</i>, Wood and Buildings	121
S. C. Watkinson and D. C. Eastwood	
I. Introduction	122
II. Evolutionary Origins	123
III. Genomic Analysis of the Wood Decomposing Machinery in <i>S. lacrymans</i>	126
IV. Whole Organism Physiology and Adaptation to Environment	132
V. <i>S. lacrymans</i> in Buildings	139
VI. Conclusion	144
Acknowledgments	145
References	145
Index	151
Contents of Previous Volumes	155
