Preface to the Fifth Edition	xi	IV. Regulation of Tropic Hormone Secretion in Mammals	119
1. An Overview of Chemical Bioregulation in Vertebrates	1	V. The Nonapeptide Hormones	133
I. The Comparative Vertebrate Approach	2	VI. The Pineal Gland	137
II. The Origins of Bioregulation	3	VII. Clinical Aspects of the Neuroendocrine System	143
III. Categories of Bioregulators	3	VIII. Summary	145
IV. General Organization of Bioregulatory Systems	6	Study Questions	147
V. Cell and Tissue Organization of Bioregulatory Systems	8	Suggested Readings	147
VI. Homeostasis	13	5. The Hypothalamus—Pituitary System in Non-Mammalian Vertebrates	151
VII. Organization and Goals for This Textbook	21	I. The Pituitary Gland of Fishes: Anatomical Considerations	152
Study Questions	21	II. The Pituitary of Tetrapod Vertebrates: Anatomical Considerations	160
Suggested Reading	22	III. The Hypothalamus of Non-Mammalian Vertebrates	162
2. Methods to Study Bioregulation	23	IV. Tropic Hormones of Non-Mammalian Vertebrates	166
I. The Scientific Method	23	V. Comparative Aspects of Hypothalamic Control of Pituitary Function in Non-Mammals	183
II. Methods of Endocrine Analysis	28	VI. Nonapeptide Neurohormones of the Non-Mammalian Pars Nervosa	192
III. Molecular Biology and Bioregulation	34	VII. The Epiphysial Complex of Non-Mammals	196
IV. Animal Models	38	VIII. Summary	202
Study Questions	39	Study Questions	202
Suggested Reading	39	Suggested Reading	203
3. Synthesis, Metabolism, and Actions of Bioregulators	41	6. The Hypothalamus—Pituitary—Thyroid (HPT) Axis of Mammals	207
I. Amino Acids, Amines, Peptides, and Proteins	41	I. Some Historical Aspects of Thyroid Physiology	207
II. Steroid Bioregulators	61	II. Development and Organization of the Mammalian Thyroid Gland	209
III. Thyroid Hormones	80	III. Synthesis, Secretion, Action, and Metabolism of Thyroid Hormones	210
IV. Eicosanoids	85	IV. Factors That Influence Thyroid Function in Mammals	217
V. Summary	87		
Study Questions	89		
Suggested Reading	89		
4. Organization of the Mammalian Hypothalamus—Pituitary Axes	93		
I. The Mammalian Pituitary	96		
II. The Mammalian Hypothalamus	103		
III. Tropic Hormones of the Adenohypophysis	109		

V. Biological Actions of Thyroid Hormones in Mammals	221	10. The Endocrinology of Mammalian Reproduction	317
VI. Clinical Aspects of Thyroid Function	224	I. General Features of Mammalian Reproduction	317
VII. Summary	228	II. Reproduction in Monotremes and Marsupials	323
Study Questions	229	III. Reproduction in Eutherian Mammals	329
Suggested Reading	229	IV. Endocrine Regulation in Eutherian Males	333
7. The Hypothalamus—Pituitary—Thyroid (HPT) Axis of Non-Mammalian Vertebrates	231	V. Endocrine Regulation in Eutherian Females	339
I. Evolution of the Thyroid Gland and Its Functions	233	VI. Reproductive Cycles in Selected Eutherian Females	357
II. Comparative Thyroid Physiology	237	VII. Endocrine Disruptors and Mammalian Reproduction	363
III. Summary	257	VIII. Major Human Endocrine Disorders Related to Reproduction	365
Study Questions	257	IX. Summary	370
Suggested Reading	257	Study Questions	371
8. The Mammalian Adrenal Glands: Cortical and Chromaffin Cells	261	Suggested Reading	372
I. The Mammalian Adrenal Cortex	262	11. Comparative Aspects of Vertebrate Reproduction	375
II. Biosynthesis and Transport of Corticosteroids	264	I. Some General Features of Vertebrate Reproduction	375
III. Secretion and Actions of Glucocorticoids	267	II. Reproduction in Agnathan Fishes: Cyclostomes	383
IV. Allostasis and Allostatic Load	272	III. Reproduction in Chondrichthyan Fishes	386
V. Aldosterone: The Principal Mammalian "Mineralocorticoid"	273	IV. Reproduction in Bony Fishes	389
VI. Endocrine Disruption of Adrenal Cortex Function	279	V. Reproduction in Amphibians	397
VII. Clinical Aspects of the Adrenal Axis	280	VI. Reproduction in Reptiles	416
VIII. The Mammalian Adrenal Medulla	283	VII. Reproduction in Birds	424
IX. Summary	287	VIII. Endocrine Disruption of Reproduction in Non-Mammalian Vertebrates	434
Study Questions	288	IX. Summary	434
Suggested Reading	288	Study Questions	435
9. Comparative Aspects of Vertebrate Adrenals	291	Suggested Reading	435
I. Comparative Aspects of Adrenocortical Tissue	292	12. Chemical Regulation of Feeding, Digestion and Metabolism	443
II. Physiological Roles for Corticosteroids in Non-Mammalian Vertebrates	299	I. Regulation of Feeding	443
III. Renin—Angiotensin System in Non-Mammals	306	II. Regulation of Digestion	449
IV. Natriuretic Peptides (NPs) in Non-Mammalian Vertebrates	308	III. The Mammalian Pancreas	463
V. Evolution of Chromaffin Tissue and Adrenal Medullary Hormones	310	IV. Hormones Regulating Mammalian Metabolism	471
VI. Endocrine Disruption of Corticosteroid Functions in Non-Mammalian Vertebrates	311	V. Clinical Aspects of Pancreatic Function	474
VII. Summary	311	VI. Summary	477
Study Questions	313	Study Questions	480
Suggested Reading	313	Suggested Reading	480

13. Comparative Aspects of Feeding, Digestion, and Metabolism	483
I. Hormones and Feeding in Non-Mammals	483
II. Hormones and Digestion in Non-Mammals	484
III. Comparative Aspects of the Endocrine Pancreas	489
IV. Summary	499
Study Questions	499
Suggested Reading	499

14. Regulation of Calcium and Phosphate Homeostasis in Vertebrates	501
I. Importance of Calcium and Phosphate	501
II. Bone Formation and Resorption in Mammals	503
III. Endocrine Regulation of Calcium and Phosphate Homeostasis in Mammals	503

IV. Major Clinical Disorders Associated with Calcium Metabolism	514
V. Calcium and Phosphate Homeostasis in Non-Mammalian Vertebrates	517
VI. Summary	525
Study Questions	527
Suggested Reading	527

Appendix A: Abbreviations	529
Appendix B: Vertebrate Phylogeny and Evolution	537
Appendix C: Amino Acid Abbreviations	545
Appendix D: Bioassays	547
Appendix E: Units for Measuring Hormones in Tissues	555
Appendix F: Vertebrate Tissue Types	557
Appendix G: Comparative Pituitary Cytology	561
Appendix H: Metabolic Pathways	563
Index	571
