ix

1. Giant Vesicles: A Biomimetic Tool for Membrane Characterization 1

Rumiana Dimova

1. Introduction	2
2. Membrane Material Properties	3
3. Effects of Embedded and Anchored Molecules	8
4. Vesicles in External Electric Fields	17
5. Concluding Remarks	42
Acknowledgments	43
References	43

2. Low-Frequency Sound Propagation in Lipid Membranes 51

Lars D. Mosgaard, Andrew D. Jackson, and Thomas Heimburg

1. Introduction	52
2. The Propagating Soliton in Nerve Membranes	54
3. Brief Overview of Sound	56
4. System Response to Adiabatic Pressure Perturbations	58
5. Adiabatic Compressibility	62
6. Results—The Speed of Sound	64
7. Discussion	68
References	72

3. Interactions of Biopolymer Chitosan with Plasma Membrane in Biomedical Applications 75

Peter Veranič, Andreja Erman, and Mojca Kerec-Kos

1. Introduction	76
2. Chitosan as an Absorption Enhancer	77
3. Use of the Cytolytic Effect of Chitosan	82
4. Use of Chitosan in Tissue Engineering	86
5. Conclusion	88
References	88

4. Single-Chain Bolaphospholipids: Temperature-Dependent Self-assembly and Mixing Behavior with Phospholipids	93
Annette Meister and Alfred Blume	
1. Introduction	94
2. Temperature-Dependent Self-assembly of Single-Chain Bolalipids	96
3. Mixing Behavior of Single-Chain Bolalipids with Phospholipids	120
4. Conclusions	123
Acknowledgments	124
References	124
5. Dynamics of Heterogeneity in Fluid Membranes	129
Shigeyuki Komura, Sanoop Ramachandran, Kazuhiko Seki, and Masayuki Imai	
1. Introduction	130
2. Membrane Hydrodynamics	133
3. Dynamics of Concentration Fluctuations	136
4. Phase Separation Dynamics	146
5. Conclusion and Outlook	159
Acknowledgments	161
References	161
6. Lipid Microdomains—Structure, Function, and Controversies	165
Lucyna Mrówczyńska	
1. Introduction	166
2. Lipid Bilayer—From "the Ocean of Lipids" to "the Mosaic of Lipid Microdomains"	168
3. Membrane Microdomains Are Defined—The Lipid Rafts Definition	174
4. Detergent Insolubility of Membrane Microdomains—Artifacts or Facts	174
5. The Search for the Universal Lipid Raft Marker	178
6. Visualization of Microdomains in Intact Cells and in Model Membrane Systems—State of the Art	180
7. Biological Importance of Lipid Microdomains Health and Diseases	184
8. Conclusions	188
Acknowledgment	189
References	189

7. Polyelectrolytes and Surfactants in Aqueous Solutions: From Dilute to Concentrated Systems	199
Ksenija Kogej	
1. Introduction	200
2. Polyelectrolytes	202
3. Surfactants	205
4. Mixed PEL–Surfactant Solutions	207
5. Relation with Hydrophobically Associating Polymers	232
6. Concluding Remarks	233
References	234
8. Implications of Microvesicle and Cell Surface Protein Shedding for Biomarker Studies, Cancerogenesis, and Therapeutic Target Discovery in Ovarian Cancer	239
Katarina Černe and Borut Kobal	
1. Ovarian Cancer	240
2. Mechanisms of Soluble Protein Release	247
3. Role of Vesicle and Ectodomain and Shedding in Ovarian Cancer	254
4. Protein Secretion Rates and Blood Biomarkers' Level	264
5. MVs and Sheddases as Potential Therapeutic Targets	266
6. Conclusions	268
Acknowledgments	268
References	268
9. A Comparison of the Hodgkin–Huxley Model and the Soliton Theory for the Action Potential in Nerves	275
Revathi Appali, Ursula van Rienen, and Thomas Heimburg	
1. Introduction	276
2. Lipids and Proteins in Neuronal Membranes	277
3. Electrical Circuits and the HH Model	279
4. Pulse Propagation Based on the Thermodynamics of the Biological — Membrane: The Soliton Model	283
5. Comparison of HH and Soliton Models	289
6. Conclusions	295
Acknowledgments	296
References	296
