Preface	xix
CHAPTER 1 Microscope Basics	1
Greenfield Sluder, Joshua J. Nordberg	
Introduction	2
1.1 How Microscopes Work	2
1.2 Objective Basics	6
1.3 Mounting Video Cameras on the Microscope	8
Reference	10
CHAPTER 2 The Optics of Microscope Image Formation	11
David E. Wolf	
Introduction	12
2.1 Physical Optics: The Superposition of Waves	13
2.2 Huygens' Principle	14
2.3 Young's Experiment: Two-Slit Interference	15
2.4 Diffraction from a Single Slit	18
2.5 The Airy Disk and the Issue of Microscope Resolution	19
2.6 Fourier or Reciprocal Space: The Concept of Spatial Frequencies	23
2.7 Resolution of the Microscope	28
2.8 Resolution and Contrast	30
Conclusions	31
2.9 Appendix A	31
2.10 Appendix B	35
2.11 Appendix C	39
Acknowledgments	42
References	42
CHAPTER 3 Proper Alignment of the Microscope	43
Rudi Rottenfusser	
3.1 Key Components and Image Locations of the Light Microscope	44
3.2 Working the Microscope: Basic Setup	60
3.3 Addendum	66
Acknowledgments	67

CHAPTER 4	Fundamentals of Fluorescence and Fluorescence Microscopy	69
	David E. Wolf	
	Introduction	70
4.1	Light Absorption and Beer's Law	71
4.2	Atomic Fluorescence	73
4.3	Organic Molecular Fluorescence	74
4.4	Excited State Lifetime and Fluorescence Quantum Efficiency	76
4.5	Excited State Saturation	77
4.6	Nonradiative Decay Mechanisms	77
4.7	Fluorescence Resonance Energy	78
4.8	Fluorescence Depolarization	80
4.9	Measuring Fluorescence in the Steady State	82
4.10	Construction of a Monochromator	83
4.11	Construction of a Photomultiplier Tube	84
4.12	Measuring Fluorescence in the Time-Domain	84
4.13	Filters for the Selection of Wavelength	92
4.14	The Fluorescence Microscope	94
4.15	The Power of Fluorescence Microscopy	95
	Acknowledgments	96
	References	96
CHAPTER 5	Fluorescent Protein Applications in Microscopy	99
	Whitney L. Johnson, Aaron F. Straight	
5.1	The Identification of Green Fluorescent Protein	100
5.2	Formation of the GFP Chromophore	101
5.3	The Structure of GFP	103
5.4	Mutagenesis to Alter the Properties of GFP	104
5.5	Imaging FPs	108
5.6	Applications of FP Imaging	114
	Conclusion	117
	References	118
CHAPTER 6	Live-Cell Fluorescence Imaging	125
	Jennifer C. Waters	
	Introduction	126
6.1	Preparing a Specimen for Fluorescence Live-Cell Imaging	127
6.2	Choice of Microscope	132
6.3	Wide-Field Illumination of the Specimen	134
6.4	Choosing the Best Objective Lens for Your Application	138

6.5	Acquiring Digital Images Over Time.....	141
6.6	nD Imaging.....	145
6.7	Verifying Cell Health and Troubleshooting Sick Cells.....	146
	Conclusion.....	148
	Acknowledgments	148
	References.....	148
CHAPTER 7	Practical Aspects of Adjusting Digital Cameras.....	151
	Joshua J. Nordberg, Greenfield Sluder	
	Introduction	152
7.1	Measuring Gray-Level Information.....	152
7.2	Camera Settings	154
7.3	Contrast Stretching.....	157
7.4	Camera Versus Image Display Controls	159
	Acknowledgments	161
	References.....	162
CHAPTER 8	Cameras for Digital Microscopy.....	163
	Kenneth R. Spring	
8.1	Overview	164
8.2	Basic Principles.....	164
8.3	Application of CCD Cameras in Fluorescence Microscopy.....	176
8.4	Future Developments in Imaging Detectors.....	178
	Further Reading	178
CHAPTER 9	A High-Resolution Multimode Digital Microscope System.....	179
	Edward D. Salmon, Sidney L. Shaw, Jennifer C. Waters, Clare M. Waterman-Storer, Paul S. Maddox, Elaine Yeh, Kerry Bloom	
	Introduction	181
9.1	Design Criteria	182
9.2	Microscope Design.....	186
9.3	Cooled CCD Camera	193
9.4	Digital Imaging System	201
9.5	Example Applications	203
	References.....	209
	Further Reading	210
CHAPTER 10	Electronic Cameras for Low-Light Microscopy.....	211
	Ivan Rasnik, Todd French, Ken Jacobson, Keith Berland	
	Introduction	212

10.1	Parameters Characterizing Imaging Devices.....	216
10.2	Specific Imaging Detectors and Features.....	228
	Conclusions	239
	References.....	239
CHAPTER 11	Camera Technologies for Low Light Imaging: Overview and Relative Advantages	243
	Butch Moomaw	
11.1	Overview	244
11.2	CCD and sCMOS Technologies.....	245
11.3	Low Light Camera Review.....	247
11.4	Sensitivity.....	252
11.5	Signal to Noise.....	255
11.6	Comparing Camera Noise in Different Technologies.....	258
11.7	DR and Detectable Signal Change	261
11.8	Required Levels of Signal to Noise.....	271
11.9	Sensitivity Comparison	275
11.10	Spatial Resolution Considerations	276
11.11	Temporal Resolution Considerations.....	278
11.12	Geometric Distortion.....	279
11.13	Shading.....	279
11.14	Usability	280
11.15	Advanced Technology Nutshell.....	282
	Acknowledgments	283
	Reference	283
CHAPTER 12	Post-Processing for Statistical Image Analysis in Light Microscopy	285
	Richard A. Cardullo, Edward H. Hinchcliffe	
	Introduction	286
12.1	Digitization of Images	286
12.2	Using Gray Values to Quantify Intensity in the Microscope.....	288
12.3	Noise Reduction.....	289
12.4	Contrast Enhancement	294
12.5	Transforms, Convolutions, and Further Uses for Digital Masks	299
12.6	Thresholding.....	312
	Conclusions	314
	References.....	314

CHAPTER 13	65,000 Shades of Grey: Use of Digital Image Files in Light Microscopy	317
	Sidney L. Shaw, Edward H. Hinchcliffe	
	Introduction	318
13.1	What is an Image File?	320
13.2	Bit Depth	320
13.3	File Formats	322
13.4	Sampling and Spatial Resolution	325
13.5	Color	325
13.6	Converting RGB to CMYK	327
13.7	Compression	329
13.8	Video Files	329
13.9	Video Codecs	331
13.10	Choosing a Codec	332
	Conclusions	335
	Acknowledgments	335
	References	336
CHAPTER 14	Quantitative Analysis of Digital Microscope Images	337
	David E. Wolf, Champika Samarasekera, Jason R. Swedlow	
14.1	So You Want to do Digital Imaging	338
14.2	An Illustrative Example	339
14.3	What is an Image?	340
14.4	What Kind of Quantitative Information Do You Want?	341
14.5	Quantitative Microscopy: A Tool Kit	341
14.6	Exercise 1: A Simple Calibration Curve, Relative Scale	342
14.7	Exercise 2: A Simple Calibration Curve, Absolute Scale	345
14.8	Exercise 3: Precision in a Calibration Curve	346
14.9	Standard Deviations, Standard Errors of the Mean, t -Tests, and Other Confusions	348
14.10	Dynamic Range, Do Not Waste it	350
14.11	Signal-to-Noise Ratio, S/N , and Signal-to-Background Ratio, S/B	350
14.12	Propagation of Error in Calculated Quantities	351
14.13	Exercise 4: Error Propagation in Imaging	352
14.14	Accuracy and Precision, Calibrating Against a Reference Standard	354
14.15	Flatfield Correction	354
14.16	Exercise 5: Flatfield Correction	355
14.17	Applications Requiring Spatial Corrections	355

14.18	Maximizing Resolution Before You Start.....	356
14.19	Exercise 6: Converting Pixels to Microns.....	357
14.20	Exercise 7: Imaging Warping.....	357
14.21	Exercise 8: Two-Color Coincidence.....	361
14.22	Two-Camera and Two-Color Imaging.....	363
14.23	Putting it All Together	364
14.24	Appendix A. Error Propagation: A Generalized Equation	364
14.25	Appendix B. Image Translation and Rotation.....	366
	Acknowledgments	367
	References.....	367
CHAPTER 15	Evaluating Optical Aberrations Using Fluorescent Microspheres: Methods, Analysis, and Corrective Actions.....	369
	Paul C. Goodwin	
	Introduction	370
15.1	Rationale.....	371
15.2	Methods.....	371
15.3	Discussion	374
	Summary	384
	Acknowledgments	384
	References.....	385
CHAPTER 16	Ratio Imaging: Practical Considerations for Measuring Intracellular Ca^{2+} and pH in Living Cells.....	387
	Nathan O'Connor, Randi B. Silver	
	Introduction	388
16.1	Why Ratio Imaging?.....	388
16.2	Properties of the Indicators BCECF and Fura-2	389
16.3	Calibration of the Fluorescence Signal	396
16.4	Components of an Imaging Workstation.....	401
16.5	Experimental Chamber and Perfusion System:	
	A Simple Approach.....	403
	Conclusion.....	405
	Acknowledgments	405
	References.....	405
CHAPTER 17	Quantitative Fluorescence Microscopy and Image Deconvolution.....	407
	Jason R. Swedlow	
	Introduction	408

17.1	Quantitative Imaging of Biological Samples Using Fluorescence Microscopy	409
17.2	Image Blurring in Biological Samples	417
17.3	Applications for Image Deconvolution	423
17.4	Concluding Remarks	423
	Acknowledgments	424
	References	424
CHAPTER 18	Practical Aspects of Quantitative Confocal Microscopy	427
	John M. Murray	
	Introduction	428
18.1	Setting Up for Quantitative Imaging	428
18.2	Correcting Nonuniformities (Flat Fielding)	430
18.3	Limitations to Exact Quantitation	432
18.4	Evaluating and Comparing Performance	438
	References	440
CHAPTER 19	Theoretical Principles and Practical Considerations for Fluorescence Resonance Energy Transfer Microscopy	441
	Richard A. Cardullo	
	Introduction	441
19.1	Principles and Basic Methods of FRET	442
19.2	FRET Microscopy	448
	Conclusions	455
	Acknowledgments	455
	References	455
CHAPTER 20	Fluorescence Lifetime Imaging Microscopy for Quantitative Biological Imaging	457
	Leng-Chun Chen, William R. Lloyd, III, Ching-Wei Chang, Dhruv Sud, Mary-Ann Mycek	
	Introduction to Fluorescence Lifetime Imaging Microscopy	458
20.1	Fluorophore Excited-State Lifetime: τ	460
20.2	Methods for Creating Fluorescence Lifetime Maps	465
20.3	FLIM Techniques for Quantitative Biological Imaging	477
	Summary	483
	Acknowledgment	483
	References	484

CHAPTER 21	Fluorescence Correlation Spectroscopy: Molecular Complexing in Solution and in Living Cells	489
	Dylan A. Bulseco, David E. Wolf	
	Introduction	490
21.1	Studying Biological Systems with FCS	491
21.2	Designing and Building an FCS Instrument	509
21.3	What Are the Current Commercial Sources of FCS?	520
	Summary	520
	Acknowledgments	520
	References	521
CHAPTER 22	Breaking the Resolution Limit in Light Microscopy	525
	Rainer Heintzmann, Gabriella Fic	
	Introduction	526
22.1	What Is Resolution?	529
22.2	Methods Within the Combined Illumination and Detection Abbe Limit	534
22.3	Methods Circumventing the Abbe Limit	537
22.4	A Comment on Near Field Methods and Pendry's Lens	540
22.5	Key Points	541
	Acknowledgment	542
	References	542
	Further Reading	544
CHAPTER 23	Circumventing Photodamage in Live-Cell Microscopy	545
	Valentin Magidson, Alexey Khodjakov	
	Introduction	545
23.1	Light Intensity and Exposure Time	548
23.2	Optimization of Excitation Spectrum	551
23.3	Hardware Synchronization	554
23.4	Avoiding Unnecessary Irradiation Via Intelligent Illumination	556
	Conclusions	558
	References	559
CHAPTER 24	A User's Guide to Localization-Based Super-Resolution Fluorescence Imaging	561
	Graham T. Dempsey	
	Introduction	562
24.1	Fluorescent Probe Selection	565

Contributors

24.2	Sample Preparation	571
24.3	Instrumentation.....	575
24.4	Data Collection and Analysis	581
	Summary and Outlook	587
	Acknowledgments	588
	References.....	588
CHAPTER 25	Quantitative Ratiometric Imaging of FRET-Biosensors in Living Cells	593
	Désirée Spiering, Jose Javier Bravo-Cordero, Yasmin Moshfegh, Veronika Miskolci, Louis Hodgson	
	Introduction	594
25.1	Image Processing Methods	596
25.2	Imaging Considerations and Caveats, Pitfalls	604
	Summary	607
	Acknowledgments	607
	References.....	607
CHAPTER 26	Tip-Enhanced Raman Spectroscopy for the Base Interrogation of DNA	611
	Noah Kolodziejski	
	Introduction and Motivations.....	612
26.1	Materials.....	614
26.2	Methods	615
26.3	Discussion	624
	Summary	627
	References.....	627
Index.....		629
