vii

1. Heme Proteins in Lactic Acid Bacteria	1
Michael Baureder and Lars Hederstedt	
1. Introduction	2
2. Properties and Biosynthesis of Heme	4
3. Heme Proteins	6
4. Lactic Acid Bacteria	7
5. Heme and LAB in Historical Perspective	10
6. Acquisition and Intracellular Fate of Heme	13
7. Heme Proteins in LAB	18
8. Heme Protein Biogenesis	27
9. Concluding Remarks and Outlook	32
Acknowledgement	34
References	34
2. Microbial Sulfite Respiration	45
Jörg Simon and Peter M.H. Kroneck	
1. Introduction	46
2. Properties of Sulfite and Related Compounds	47
3. The Diverse Role of Sulfite in Microbial Metabolism	55
4. Sulfite-Converting Enzymes—Overview and Terminology	59
5. Physiology of Sulfite-Converting Microorganisms	61
6. Microbial Sulfite Reductases	65
7. Microbial Sulfite Dehydrogenases	94
8. Evolutionary Aspects	98
9. Conclusions and Perspectives	100
Acknowledgments	101
References	101
3. Our Second Genome—Human Metagenome: How Next-Generation Sequencer Changes our Life Through Microbiology	119
Shuolin Song, Thomas Jarvie, and Masahira Hattori	
1. Introduction	120
2. Overview of NGS Technology	121

3. Genomics and Metagenomics of Microbes	126
4. Scientific Publication Tells Great Potential of Metagenomic Applications with NGS	130
5. Microbial Profiling and Diversity in Environment	131
6. Human and Mouse Metagenome on Healthcare Study	133
7. Virus and Vaccine	136
8. Bird View of Human Metagenome Project	137
9. First Artificial Life Form by Synthesis	137
10. Publicly Available Bioinformatic Tools for Metagenomics and Microbial Diversity	138
11. How Future Advances in NGS ⁿ is Going to Change Our Life	138
References	139
