

CONTENTS

<i>Contributors</i>	<i>vii</i>
1. Mechanisms of Epigenetic Regulation of Leukemia Onset and Progression	1
Panagiotis Ntziachristos, Jasper Mullenders, Thomas Trimarchi, and Iannis Aifantis	
1. Introduction	2
2. Aberrant DNA Methylation in Leukemia	6
3. Disruption of Histone-Modifying Complexes Polycomb and MLL in Leukemia	14
4. Other Epigenetic Writers, Erasers, and Readers	19
5. Novel Aspects and Technologies in Epigenetics: Implications for Leukemia	25
Acknowledgments	27
References	28
2. Translocations in Normal B Cells and Cancers: Insights from New Technical Approaches	39
Roberto Chiarle	
1. Mechanistic Elements that Generate Chromosomal Translocations	40
2. Novel High-Throughput Methods to Study Chromosomal Translocations	50
3. New Findings on Translocation Formation Obtained by HTGTS and TC-Seq	52
4. Landscape of Translocations in Cancers	57
5. Perspectives	63
Acknowledgments	64
References	64
3. The Intestinal Microbiota in Chronic Liver Disease	73
Jorge Henao-Mejia, Eran Elinav, Christoph A. Thaiss, and Richard A. Flavell	
1. Introduction	74
2. Role of the Intestinal Microbiota on Chronic Liver Diseases	75
3. Role of the Interactions Between the Innate Immune System and the Intestinal Microbiota on Chronic Liver Diseases	81
4. Probiotics and their Potential Role in Liver Disease Therapy	89

5. Conclusions	90
References	91
4. Intracellular Pathogen Detection by RIG-I-Like Receptors	99
Evelyn Dixit and Jonathan C. Kagan	
1. General Principles of the Antiviral Innate Immune Response	99
2. RLRs are RNA Sensors	101
3. RIG-I Activation and Receptor Proximal Signal Propagation	109
4. Regulatory Mechanisms of RIG-I Signaling	113
5. Conclusions and Future Directions	117
Acknowledgments	118
References	118
