

CONTENTS

<i>Contributors</i>	<i>xiii</i>
<i>Preface</i>	<i>xxi</i>
<i>Volumes in Series</i>	<i>xxiii</i>

1. Measurement of *endo*-1,4- β -Glucanase **1**

Barry V. McCleary, Vincent McKie, and Anna Draga

1. Introduction	2
2. Purity of EG Enzymes Included in the Study	2
3. Polysaccharide and Oligosaccharide Substrates	3
4. Viscometric Assay of EG Activity	4
5. Reducing-Sugar Assays for EG Activity	6
6. Soluble Chromogenic Substrates	10
7. Insoluble Chromogenic Substrates	14
8. Summary	15
References	16

2. Biomass Conversion Determined via Fluorescent Cellulose Decay Assay **19**

Bente Wischmann, Marianne Toft, Marco Malten, and K. C. McFarland

1. Introduction	20
2. Correlation Between Cellulose Decay Monitored by HPLC and by Fluorescence	21
3. Assay Development and Modeling of Response Using Statistics	24
4. Final Assay Procedure	32
Acknowledgment	36
References	36

3. The Analysis of Saccharification in Biomass Using an Automated High-Throughput Method **37**

Caragh Whitehead, Leonardo D. Gomez, and Simon J. McQueen-Mason

1. Introduction	38
2. Automatic Saccharification Platform	39

3. Enzyme Characterization	44
4. Concluding Remarks	49
Acknowledgments	49
References	49
4. Studies of Enzymatic Cleavage of Cellulose Using Polysaccharide Analysis by Carbohydrate gel Electrophoresis (PACE)	51
Ondrej Kosik, Jennifer R. Bromley, Marta Busse-Wicher, Zhinong Zhang, and Paul Dupree	
1. Introduction	52
2. The Principle of PACE	54
3. Discussion: Other Possible Applications	64
4. Summary	65
Acknowledgments	65
References	65
5. Measuring Processivity	69
Svein J. Horn, Morten Sørle, Kjell M. Vårum, Priit Väljamäe, and Vincent G. H. Eijssink	
1. Introduction	70
2. Classical Methods for Measuring Processivity	71
3. Learning from Family 18 Chitinases	76
4. Methods Based on Labeling—Apparent Versus Intrinsic Processivity	80
5. Concluding Remarks	89
Acknowledgments	90
References	90
6. Distinguishing Xyloglucanase Activity in <i>endo</i>-β(1 $\rightarrow$ 4)glucanases	97
Jens M. Eklöf, Marcus C. Ruda, and Harry Brumer	
1. Introduction	98
2. Analytical Tools for Xyloglucan Oligo- and Polysaccharide Analysis	101
3. Substrate Preparation	105
4. Determination of Specific Xyloglucan Activity in a Glucanase	109
5. Coda: Xyloglucan Hydrolysis by β -glucanases—Obvious but Often Overlooked	116
Acknowledgments	116
References	117

7. Methods for Structural Characterization of the Products of Cellulose- and Xyloglucan-Hydrolyzing Enzymes	121
Maria J. Peña, Sami T. Tuomivaara, Breeanna R. Urbanowicz, Malcolm A. O'Neill, and William S. York	
1. Introduction	122
2. Preparation of Substrates	124
3. Purification of the Oligosaccharide Products	124
4. Chemical and Structural Analysis of the Reaction Products	127
Acknowledgments	137
References	138
8. The Crystallization and Structural Analysis of Cellulases (and Other Glycoside Hydrolases): Strategies and Tactics	141
Shirley M. Roberts and Gideon J. Davies	
1. General Crystallization Considerations	144
2. Optimization and Additive Screens	149
3. Cellulase- and Glycosidase-Specific Complex Tactics	152
4. Buffer and Cryo-protection Problems	159
5. Toward a Cellulase-Specific Approach?	162
Acknowledgments	162
References	163
9. Visualization of Cellobiohydrolase I from <i>Trichoderma reesei</i> Moving on Crystalline Cellulose Using High-Speed Atomic Force Microscopy	169
Kiyohiko Igarashi, Takayuki Uchihashi, Anu Koivula, Masahisa Wada, Satoshi Kimura, Merja Penttilä, Toshio Ando, and Masahiro Samejima	
1. Introduction	170
2. Sample Preparation for AFM Observations	171
3. Observation of Cellulase Molecules on Crystalline Cellulose	174
4. Image Analysis	177
5. Conclusion	179
Acknowledgments	180
References	180
10. Small-Angle X-ray Scattering and Crystallography: A Winning Combination for Exploring the Multimodular Organization of Cellulolytic Macromolecular Complexes	183
Mirjam Czjzek, Henri-Pierre Fierobe, and Véronique Receveur-Bréchet	
1. Introduction	184
2. Measuring and Analyzing SAXS Data	186

3. Combining SAXS and Crystallography to Analyze Multimodular Organization of Cellulolytic Enzymes and Complexes	191
4. Conclusions and Outlook	203
Acknowledgments	205
References	205
11. Quantitative Approaches to The Analysis of Carbohydrate-Binding Module Function	211
D. Wade Abbott and Alisdair B. Boraston	
1. Introduction	212
2. Experimental Approaches to Investigating CBM Function	215
3. Summary and New Directions for CBM Research	228
References	229
12. <i>In Situ</i> Detection of Cellulose with Carbohydrate-Binding Modules	233
J. Paul Knox	
1. Introduction	234
2. Preparation of Plant Materials	236
3. CBM-Labeling Procedures	240
4. Summary	244
Acknowledgment	244
References	244
13. Interactions Between Family 3 Carbohydrate Binding Modules (CBMs) and Cellulosomal Linker Peptides	247
Oren Yaniv, Felix Frolow, Maly Levy-Assraf, Raphael Lamed, and Edward A. Bayer	
1. Introduction	248
2. Enzyme-Linked Immunosorbent Assay (ELISA) to Check Possible Interactions Between CBM3 and Cellulosomal Linkers	250
3. Isothermal Titration Calorimetry for Analysis of Interactions Between CBM3 and Cellulosomal Linkers	253
Acknowledgments	258
References	258
14. Approaches for Improving Thermostability Characteristics in Cellulases	261
Michael Anbar and Edward A. Bayer	
1. Construction of Cellulase Libraries	262
2. Screening Endoglucanases for Enhanced Thermostability	265

3. Screening β -Glucosidase for Enhanced Thermostability	267
4. <i>In Vitro</i> Recombination Between Best Thermostable Mutants	269
References	271
15. Thermophilic Glycosynthases for Oligosaccharides Synthesis	273
Beatrice Cobucci-Ponzano, Giuseppe Perugino, Andrea Strazzulli, Mosè Rossi, and Marco Moracci	
1. Introduction	274
2. Thermophilic β -Glycosynthases from GH1	276
3. Thermophilic α -L-Fucosynthases from GH29	285
4. Thermophilic α -D-Galactosynthase from GH36	292
5. Summary	295
Acknowledgments	296
References	296
16. Engineering Cellulase Activity into <i>Clostridium acetobutylicum</i>	301
Henri-Pierre Fierobe, Florence Mingardon, and Angélique Chanal	
1. Introduction	302
2. Electrotransformation of <i>C. acetobutylicum</i> ATCC824 and Storage of Recombinant Strains	303
3. Detection/Quantification of the Secreted Heterologous Cellulosomal Protein	306
4. Recombinant Strain of <i>C. acetobutylicum</i> Secreting a Heterologous Minicellulosome	308
5. Secretion Issue and the Use of "Carrier" Modules	311
6. Outlook	314
Acknowledgments	315
References	315
17. Transformation of <i>Clostridium Thermocellum</i> by Electroporation	317
Daniel G. Olson and Lee R. Lynd	
1. Introduction	318
2. Materials	318
3. Methods	320
4. Troubleshooting	328
References	329

18. Genetic and Functional Genomic Approaches for the Study of Plant Cell Wall Degradation in <i>Cellvibrio japonicus</i>	331
Jeffrey G. Gardner and David H. Keating	
1. Introduction	332
2. Growth and Maintenance of <i>C. japonicus</i>	333
3. Genetic Manipulation of <i>C. japonicus</i>	336
4. Construction of Mutations	338
5. Transcriptomic Analysis of <i>C. japonicus</i>	341
6. Global Expression Profiling	342
7. Summary and Future Directions	345
Acknowledgment	345
References	345
19. Methods for the Isolation of Cellulose-Degrading Microorganisms	349
James E. McDonald, David J. Rooks, and Alan J. McCarthy	
1. Introduction	350
2. Cellulosic Substrates	351
3. Isolation and Cultivation of Cellulolytic Microorganisms	354
4. Methods for the Detection of Cellulose Degradation in Cultures	366
5. Future Prospects	368
Acknowledgments	369
References	369
20. Metagenomic Approaches to the Discovery of Cellulases	375
David J. Rooks, James E. McDonald, and Alan J. McCarthy	
1. Introduction	376
2. Nucleic Acid Extraction from Environmental Samples	377
3. Metagenomic Libraries	379
4. Metatranscriptomics	385
5. Outlook	389
Acknowledgment	390
References	390
21. <i>Escherichia coli</i> Expression, Purification, Crystallization, and Structure Determination of Bacterial Cohesin–Dockerin Complexes	395
Joana L. A. Brás, Ana Luisa Carvalho, Aldino Viegas, Shabir Najmudin, Victor D. Alves, José A. M. Prates, Luís M. A. Ferreira, Maria J. Romão, Harry J. Gilbert, and Carlos M. G.A. Fontes	
1. Introduction	396
2. Cloning of Cohesin and Dockerin Genes in Prokaryotic Expression Vectors	397

3. Expression and Purification of Cohesin–Dockerin Complexes in <i>E. coli</i>	400
4. The Dual Binding Mode and the Crystallization of Cohesin–Dockerin Complexes	402
5. X-ray Crystallography of Cohesin–Dockerin Complexes	402
6. Summary	413
Acknowledgments	414
References	414
22. Measurements of Relative Binding of Cohesin and Dockerin Mutants Using an Advanced ELISA Technique for High-Affinity Interactions	417
Michal Slutzki, Yoav Barak, Dan Reshef, Ora Schueler-Furman, Raphael Lamed, and Edward A. Bayer	
1. Introduction	418
2. Preparation of Constructs for ELISA Procedure	420
3. Detection of Free Dockerins Using iELISA	422
4. Data Analysis	425
5. Notes	426
6. Summary	427
References	427
23. Designer Cellulosomes for Enhanced Hydrolysis of Cellulosic Substrates	429
Yael Vazana, Sarah Moraïs, Yoav Barak, Raphael Lamed, and Edward A. Bayer	
1. Construction of Designer Cellulosomes	430
2. Scaffoldin Testing and Analysis of Cohesin–Dockerin Interaction	433
3. Chimeric Enzyme Testing	441
4. Sugar Analysis	449
5. Summary	450
References	451
24. High-Throughput Screening of Cohesin Mutant Libraries on Cellulose Microarrays	453
Michal Slutzki, Vered Ruimy, Ely Morag, Yoav Barak, Rachel Haimovitz, Raphael Lamed, and Edward A. Bayer	
1. Introduction	454
2. Cohesin Mutants: Library Preparation	456
3. Screening Small Cohesin Libraries	456
4. Screening Large Cohesin Libraries	458
5. Microarray Probing	459

6. DNA Extraction	460
7. Notes	461
8. Summary	461
References	462
<i>Author Index</i>	465
<i>Subject Index</i>	489
