Preface	ix
Acknowledgements	ix
Abbreviations	xii
1 Human genetic disease	1
1.1 Introduction	1
1.2 Single-gene defects	2
1.3 Multifactorial or complex disorders and traits	13
1.4 Chromosomal mutations	14
1.5 Mitochondrial mutations	17
1.6 The Human Genome Project	22
1.7 Summary	23
Further reading	25
2 An introduction to the structure of the human genome	27
2.1 Introduction	27
2.2 Sequence architecture of the human genome	28
2.3 Structure of chromosomes	42
2.4 Summary	47
Further reading	49
3 Mapping the human genome	52
3.1 Introduction	52
3.2 Sequence tagged sites: a common currency for the different types of map	55
3.3 Genetic maps	58
3.4 Physical maps	69
3.5 An integrated physical and genetic map of the human genome	82

3.6	Genome mapping is big science	84
3.7	Summary	84
	Further reading	86
4	The sequence of the human genome	88
4.1	Introduction	88
4.2	Basic technology for sequencing the human genome	91
4.3	The IHGSC clone-by-clone sequencing strategy	96
4.4	The Celera shotgun sequencing	100
4.5	Finishing the sequence	102
4.6	Single nucleotide polymorphisms	103
4.7	Annotating the sequence	103
4.8	Sequencing other genomes	106
4.9	Analysis of the human genome sequence	108
4.10	Genomics	124
4.11	The ENCODE Project	134
4.12	Next-generation sequencing technologies	137
4.13	Catalogues of somatic mutations	145
4.14	Summary	146
	Further reading	149
5	Single-gene disorders	152
5.1	Introduction	152
5.2	Cloning disease genes	153
5.3	Cystic fibrosis	158
5.4	Duchenne muscular dystrophy	165
5.5	Trinucleotide repeat expansion mutations	167
5.6	Haemoglobinopathies	178
5.7	Inherited predisposition to cancer	183
5.8	Summary	198
	Further reading	202
6	The genetic components of complex diseases	205
6.1	Introduction	205
6.2	Evidence for a genetic component in complex disorders and phenotypic traits	208
6.3	The genetic architecture of complex diseases	213
6.4	Experimental approaches to identifying risk alleles	219
6.5	Genome-wide association studies	230
6.6	Case studies of complex diseases	241
6.7	Summary	250
	Further reading	253
7	Small RNAs in human genetics	256
7.1	Introduction	256
7.2	Structure and function of microRNAs	257
7.3	MicroRNA genomics	261

7.4	MicroRNAs in human disease and diagnostics	264
7.5	RNA interference	272
7.6	RNAi screening to identify gene function and identifying drug targets	280
7.7	Therapeutic RNAi	282
7.8	The diversity of small RNAs	289
7.9	Summary	291
	Further reading	294
8	Genetic testing	296
8.1	Introduction	296
8.2	Testing for known mutations	302
8.3	Scanning genes for unknown mutations	309
8.4	Summary	317
	Further reading	319
9	Gene therapy	321
9.1	Introduction	321
9.2	Types of gene therapy	322
9.3	Methods of transferring transgenes into target cells	325
9.4	Gene therapy for cystic fibrosis	333
9.5	Progress and adverse events	335
9.6	Summary	339
	Further reading	341
10	Human population genetics and evolution	343
10.1	Introduction	343
10.2	Basic principles in human population genetics	344
10.3	Recent human evolution	352
10.4	Disease frequencies in different populations	363
10.5	Summary	366
	Further reading	368
11	DNA profiling in forensic criminology	370
11.1	Introduction	370
11.2	Current markers used for DNA profiling	372
11.3	DNA databases	374
11.4	Difficulties in the legal interpretation of DNA profiles	376
11.5	Oversights of forensic DNA profiling	378
11.6	Summary	379
	Further reading	380
12	Human genetics and society	382
12.1	Introduction	382
12.2	Genetic testing	385
12.3	Human rights	392
12.4	Patents	395

12.5	Gene therapy	398
12.6	Genetic determinism	399
12.7	Summary	400
	Further reading	402
	Glossary	404
	Index	431
