

Contents

The second science	xiii
1 Simple selection	1
2 The genetic and ecological context of selection	20
2.1 History, chance, and necessity	20
2.2 The rate of genetic deterioration	24
2.3 The rate of environmental deterioration	42
3 Natural selection in closed asexual populations	55
3.1 Microcosmologia	55
3.2 Sorting: selection of pre-existing variation	64
3.3 Purifying selection: maintaining adaptedness despite genetic deterioration	71
3.4 Directional selection: restoring adaptedness despite environmental deterioration	73
3.5 Successive substitution	91
3.6 Cumulative adaptation	95
3.7 Successive substitution at several loci	107
4 Prometheus Unbound: releasing the constraints on natural selection	130
4.1 Increasing the mutation rate	130
4.2 Horizontal transmission	134
4.3 Sex	136
4.4 Dispersal	156
5 Selection in multicellular organisms	162
5.1 Size matters	162
5.2 Reproductive allocation	166
5.3 Life histories	175
6 Artificial selection	186
6.1 Selection acting on quantitative variation	187
6.2 Generations 1–10: the short-term response	191
6.3 Generations 10–100: the limits to selection	199
6.4 Generations 100 up: new kinds of creatures	214

7 Natural selection in open populations	222
7.1 Fitness in natural populations	223
7.2 Phenotypic selection	231
7.3 Selection experiments in the field	252
7.4 Adaptation to the humanized landscape	254
7.5 The ghost of selection past	261
8 Adaptive radiation: diversity and specialization	265
8.1 Adaptive and non-adaptive radiation	265
8.2 $G \times E$	266
8.3 Specialization and generalization	281
8.4 Opportunities in space: obligations in time	290
8.5 Local adaptation	302
9 Autoselection: selfish genetic elements	308
9.1 Infection	309
9.2 Interference	322
9.3 Gonotaxis	326
10 Social selection	331
10.1 Selection within a single uniform population: density-dependent selection	331
10.2 Selection within a single diverse population: frequency-dependent selection	345
10.3 Social behaviour	352
10.4 Kin selection and group selection	366
11 Co-evolution	380
11.1 Rivals	380
11.2 Partners	385
11.3 Enemies	393
11.4 Ecosystems	408
12 Sexual selection	418
12.1 Evolution of sex	418
12.2 The alternation of generations	433
12.3 Gender	437
12.4 Beauty and the Beast	447
13 Speciation	462
13.1 Speciation and diversification	462
13.2 Experimental speciation	470
13.3 Emerging species	481
