1 Introduction	1
1.1 History	1
1.2 Interpretation of the term 'remote sensing'	2
1.3 Plant physiology and remote sensing	3
1.4 Some important considerations for the future	3
1.4.1 Continuity	3
1.4.2 Data availability	4
1.5 The structure of this book	5
➔ Websites	6
2 Basics of radiation physics for remote sensing of vegetation	7
2.1 Introduction	7
2.2 Radiation characteristics	7
2.2.1 Electromagnetic radiation	8
2.2.2 Electromagnetic spectrum	8
2.2.3 Electromagnetic energy	10
2.2.4 Sources of radiation	10
2.2.5 Radiometric terms and definitions	11
2.3 Interaction of radiation with matter	13
2.3.1 General principles	13
2.3.2 Propagation of radiation – interaction with the atmosphere	13
2.3.3 Interactions with target surfaces	19
2.4 Thermal radiation	22
2.5 Microwave radiation	23
2.6 Diffraction and interference	25
2.6.1 Diffraction	26
2.6.2 Interference	27
2.6.3 Bragg scattering	28
2.7 The radiation environment	28
2.7.1 Shortwave radiation	28
2.7.2 Longwave radiation	31
2.7.3 Radiation and the global energy budget	31
2.7.4 Microwave radiation	34
■ Further reading	34

3	Radiative properties of vegetation, soils, and water	36
3.1	Optical region	37
3.1.1	<i>Leaf radiative properties</i>	37
3.1.2	<i>Radiative properties of soil and water</i>	45
3.1.3	<i>Radiative properties of canopies</i>	47
3.1.4	<i>Measurement of leaf-angle distributions</i>	58
3.2	Thermal region	58
3.2.1	<i>Emissivities of canopy components</i>	59
3.2.2	<i>Emissivities of canopies</i>	61
3.3	Microwave region	63
3.3.1	<i>Microwave emissivity</i>	63
3.3.2	<i>Microwave backscatter</i>	64
3.3.3	<i>Advantages of microwaves for remote sensing of vegetation</i>	66
3.4	Other types of radiation	67
	■ Further reading	67

4	Plant and canopy function	68
4.1	Introduction	68
4.2	Plant anatomy and function	68
4.2.1	<i>Photosynthesis and respiration</i>	70
4.2.2	<i>Water relations, evaporation, and water loss</i>	73
4.2.3	<i>Other exchange processes (e.g. momentum and pollutants)</i>	75
4.3	Principles of mass and energy transfer between vegetation and atmosphere	76
4.3.1	<i>General transport equation</i>	76
4.3.2	<i>Diffusion</i>	76
4.3.3	<i>Convection and turbulent transfer</i>	77
4.3.4	<i>Resistances and conductances</i>	78
4.3.5	<i>Units and analogies between different transfer processes</i>	78
4.4	Canopy-atmosphere exchanges	79
4.4.1	<i>Energy balance – steady state</i>	79
4.4.2	<i>Sensible heat flux</i>	81
4.4.3	<i>Evaporation</i>	81
4.4.4	<i>Penman–Monteith combination equation</i>	82
4.4.5	<i>Canopy models</i>	83
4.4.6	<i>Non-steady state</i>	84

4.5	Measurement of fluxes	87
4.5.1	<i>Cuvette and chamber approaches</i>	87
4.5.2	<i>Micrometeorological and meteorological methods</i>	88
	■ Further reading	91
	⌚ Sample problems	91
5	Earth observation systems	92
5.1	Principles of system design	93
5.1.1	<i>Pictures and pixels</i>	93
5.1.2	<i>Resolution</i>	93
5.1.3	<i>Principles of measurement</i>	94
5.2	Sensing platforms	95
5.2.1	<i>Static and 'within-field' platforms</i>	95
5.2.2	<i>Aircraft</i>	95
5.2.3	<i>Satellites and orbits</i>	96
5.2.4	<i>The ground segment</i>	99
5.3	Sensing instruments	99
5.3.1	<i>Cameras</i>	100
5.3.2	<i>Radiometers</i>	100
5.3.3	<i>Line scanners</i>	101
5.4	What is in a pixel?	104
5.5	Using microwaves	107
5.5.1	<i>Passive microwave sensing</i>	108
5.5.2	<i>Active microwave sensing</i>	109
5.6	Laser scanning and Lidar	113
5.7	Observing system principles	116
5.7.1	<i>Sensing logistics</i>	116
5.7.2	<i>User requirements</i>	116
5.7.3	<i>Data limitations</i>	117
5.8	Current systems	118
5.8.1	<i>Low-resolution systems</i>	119
5.8.2	<i>Medium-resolution systems</i>	120
5.8.3	<i>High-resolution systems</i>	121
5.8.4	<i>Smallsats</i>	121
5.8.5	<i>Microwave systems</i>	123
5.8.6	<i>Laser systems</i>	124
5.8.7	<i>Airborne systems</i>	124
5.9	Data reception	125

6	Preparation and manipulation of optical data	128
6.1	Introduction	128
6.2	Image correction	129
6.2.1	<i>Geometric correction</i>	129
6.2.2	<i>Radiometric correction</i>	134
6.2.3	<i>Thermal data and estimation of surface temperature</i>	140
6.3	Image display	142
6.3.1	<i>Resampling/windowing</i>	142
6.3.2	<i>Density slicing</i>	142
6.3.3	<i>Colour composites</i>	143
6.3.4	<i>Other forms of display</i>	144
6.4	Image enhancement	144
6.4.1	<i>Contrast stretching</i>	144
6.4.2	<i>Spectral indices</i>	145
6.4.3	<i>Spatial filtering techniques</i>	146
6.4.4	<i>Principal components</i>	147
6.4.5	<i>Intensity, hue, and saturation transform</i>	149
6.4.6	<i>Data fusion</i>	150
6.4.7	<i>Data assimilation</i>	151
6.5	Image interpretation	152
6.5.1	<i>Classification</i>	152
6.5.2	<i>Spatial and texture analysis</i>	152
6.5.3	<i>Object detection and analysis</i>	156
6.5.4	<i>Scale and scaling up</i>	156
6.5.5	<i>The multiconcept</i>	157
6.6	Radar image interpretation	158
6.6.1	<i>Radar geometry</i>	158
6.6.2	<i>Speckle</i>	159
6.6.3	<i>Types of radar imagery</i>	159
6.6.4	<i>Interferometry</i>	160
6.6.5	<i>Image interpretation</i>	160

	🔍 Sample problems	161
7	Use of spectral information for sensing vegetation properties and for image classification	163
7.1	Introduction to multispectral and hyperspectral sensing and imaging	163
7.2	Spectral indices	164
7.2.1	<i>Vegetation indices and vegetation descriptors</i>	165
7.2.2	<i>Narrowband indices</i>	177

7.2.3	<i>Use of multiple wavelengths and derivative spectroscopy</i>	178
7.2.4	<i>Water indices</i>	182
7.3	Some other approaches to the estimation of vegetation cover	184
7.3.1	<i>Estimation of fractional vegetation cover using Lidar</i>	184
7.3.2	<i>Microwave vegetation indices</i>	184
7.4	Image classification	184
7.4.1	<i>Scatter diagrams</i>	186
7.4.2	<i>Basic classification approaches</i>	187
7.4.3	<i>Mixed pixels</i>	192

8	Multiangular sensing of vegetation structure and modelling of radiation-transfer properties	196
8.1	Introduction to multiangular sensing	196
8.1.1	<i>Why use multiangular measurement?</i>	196
8.1.2	<i>The basis for angular variation in reflectance</i>	198
8.1.3	<i>Bidirectional reflectance definitions</i>	199
8.1.4	<i>Principle of reciprocity</i>	200
8.1.5	<i>Extraction of canopy structure from BRF information</i>	201
8.2	Measurement of the BRF	202
8.2.1	<i>Basic approaches</i>	202
8.2.2	<i>Some other practical considerations in BRF measurement</i>	204
8.3	Radiation transfer and canopy reflectance models	205
8.3.1	<i>Turbid-medium models</i>	206
8.3.2	<i>Geometrical-optical models</i>	207
8.3.3	<i>Monte-Carlo ray-tracing and radiosity models</i>	208
8.3.4	<i>Kernel-driven and empirical models</i>	210
8.3.5	<i>Treatment of heterogeneous canopies</i>	210
8.3.6	<i>Spectral invariants</i>	211
8.4	Canopy generators	211
8.4.1	<i>POV-Ray</i>	212
8.4.2	<i>L-systems</i>	212
8.4.3	<i>Y-plant</i>	213
8.5	Model inversion	213
8.5.1	<i>Principles</i>	213
8.5.2	<i>Direct or 'numerical' inversion</i>	215
8.5.3	<i>Look-up tables (LUTs)</i>	215
8.5.4	<i>Machine intelligence</i>	216
8.5.5	<i>Further aspects of inversion</i>	216
8.5.6	<i>Radiative model comparisons</i>	217

8.6	'In-field' estimation of canopy biophysical parameters	219
8.6.1	<i>Direct measurement</i>	219
8.6.2	<i>Within-canopy indirect methods</i>	219
8.6.3	<i>Above-canopy indirect methods</i>	222
