

Overview of contents

The search for The Ultimate Answer	xxi
Introduction: why and how to use this book	xxii
Acknowledgements	xxv
Technical notes: using the electronic support that accompanies this book	xxvi

PART I ARITHMETIC, ALGEBRA, AND FUNCTIONS	1
--	----------

1 Arithmetic and algebra	3
2 Units; precision and accuracy	45
3 Data tables, graphs, interpolation	81
4 Molarity and dilutions	109
5 Variables, functions, and equations	125
6 Linear functions and curve sketching	151
7 Quadratic and polynomial functions	176
8 Fitting curves; rational and inverse functions	220
9 Periodic functions	259
10 Exponential and logarithmic functions	290
Historical interlude: finding the roots of polynomials	331

PART II CALCULUS AND DIFFERENTIAL EQUATIONS	335
--	------------

11 Instantaneous rate of change: the derivative	337
12 Rules of differentiation	366
13 Applications of differentiation	389
14 Techniques of integration	426
15 The definite integral	451
16 Differential equations I	481
17 Differential equations II	509
18 Extension: dynamical systems	537

Answers to odd-numbered problems	563
Appendix: The Greek alphabet	570
References	571
Index	573
