

BRIEF CONTENTS

Dedication v

Preface xix

Acknowledgments xxv

Figure Acknowledgments xxvi

Unit 1 Genes and genomes 3

1 The logic of genetic analysis 5

2 Model organisms and their genomes 29

Unit 2 Genes and mutants 93

3 Identifying mutants 95

4 Classifying mutants 133

5 Connecting a phenotype to a DNA sequence 181

6 Finding mutant phenotypes for cloned genes 237

7 Genome-wide mutant screens 261

Unit 3 Gene activity 297

8 Molecular analysis of gene expression 299

9 Analysis of gene activity using mutants 349

Unit 4 Gene interactions 393

10 Using one gene to find more genes 395

11 Epistasis and genetic pathways 449

12 Pathways, networks, and systems 481

Glossary 526
