Foreword	v
Preface	vi
Acknowledgements	viii
1. What are Allee effects?	1
1.1. Competition versus cooperation	1
1.2. The influence of density in population dynamics	3
1.3. Studies on the Allee effect	5
1.4. What is and what is not an Allee effect	9
1.5. Allee effects in six chapters	15
2. Mechanisms for Allee effects	18
2.1. Introduction	18
2.2. Reproductive mechanisms	20
2.3. Mechanisms related to survival	34
2.4. Allee effects in cooperative species	53
2.5. Conclusions	58
3. Population dynamics: modelling demographic Allee effects	62
3.1. Phenomenological models of demographic Allee effects	66
3.2. From component Allee effects to demographic Allee effects	70
3.3. Fitting Allee effect models to empirical data	96
3.4. Allee effects in the world of stochasticity	97
3.5. Allee effects in spatially structured populations	99
3.6. Allee effects and community dynamics	109
3.7. Allee effects and population stability	126
3.8. Conclusions	128

4. Genetics and evolution	131
4.1. Genetic Allee effects	131
4.2. Demographic Allee effects in genetically structured populations	145
4.3. Allee effects in the light of evolution	147
4.4. Evolutionary consequences of Allee effects	154
4.5. Conclusions	159
5. Conservation and management	160
5.1. Allee effects and the conservation of endangered species	161
5.2. Allee effects and population management	171
5.3. Detecting Allee effects	185
5.4. The short version	195
6. Conclusions and perspectives	198
6.1. What you have just read, and what awaits you now	198
6.2. Problems with demonstrating an Allee effect	199
6.3. Allee effects and ecosystem shifts	205
6.4. Allee effects in other sciences	207
6.5. The future of Allee effects	209
6.6. Farewell remarks	216
