Part I Historical Background and Philosophical Perspectives

1 A Shifting Terrain: A Brief History of the Adaptive Landscape	3
<i>Michael R. Dietrich and Robert A. Skipper, Jr.</i>	
1.1 Introduction	3
1.2 The origins of the Adaptive Landscape	3
1.3 The genetic landscape	5
1.4 The phenotypic landscape	10
1.5 The molecular landscape	12
1.6 Conclusion	14
2 Sewall Wright's Adaptive Landscape: Philosophical Reflections on Heuristic Value	16
<i>Robert A. Skipper, Jr. and Michael R. Dietrich</i>	
2.1 Introduction	16
2.2 Sewall Wright's Adaptive Landscape	16
2.3 Models, metaphors, and diagrams	17
2.4 Questioning value of the Adaptive Landscape diagram	18
2.5 The case for heuristic value	20
2.6 Conclusion	23
3 Landscapes, Surfaces, and Morphospaces: What Are They Good For?	26
<i>Massimo Pigliucci</i>	
3.1 Introduction	26
3.2 Four types of landscapes	27
3.3 What are landscapes for?	30
3.4 What to do with the landscapes metaphor(s)	32

Part II Controversies: Fisher's Fundamental Theorem Versus Sewall Wright's Shifting Balance Theory

4 Wright's Adaptive Landscape versus Fisher's Fundamental Theorem	41
<i>Steven A. Frank</i>	
4.1 Introduction	41
4.2 The disagreement about drift and dynamics	42
4.3 Fisher's goal for the fundamental theorem	44
4.3.1 Background	45
4.3.2 Fisher's framing of the problem	45
4.3.3 The fundamental theorem explained	46
4.3.4 Fisher's conservation law for mean fitness	47
4.3.5 Average excess, average effect, and genetic variance	47
4.3.6 What is fitness?	48
4.3.7 Deterioration of the environment	48
4.3.8 Misunderstandings about additivity	49
4.4 Fisher's laws versus Wright's dynamics	50
4.5 Key points in the Fisher–Wright controversy	52
4.5.1 Wright lacked interest in Fisher's general laws	52
4.5.2 Long-term dynamics and the rate of adaptation	53
4.5.3 Additivity versus genetic interactions	53
4.5.4 Wright's expression of fitness surfaces in an Adaptive Landscape	54
Acknowledgments	56
Appendix	57
5 Wright's Adaptive Landscape: Testing the Predictions of his Shifting Balance Theory	58
<i>Michael J. Wade</i>	
5.1 Introduction	58
5.2 Conceptual foundations of Wright's shifting balance theory	59
5.3 Challenges of the premises of the shifting balance theory	62
5.4 Empirical predictions of the shifting balance theory	63
5.5 Empirical tests of the predictions of Wright's shifting balance theory	66
5.6 Direct empirical tests of Wright's shifting balance theory	69
5.7 Conclusion	70
6 Wright's Shifting Balance Theory and Factors Affecting the Probability of Peak Shifts	74
<i>Charles J. Goodnight</i>	
6.1 Introduction	74
6.2 A modified view of the Adaptive Landscape	75
6.3 Wright's shifting balance theory	76
6.4 Controversies surrounding Wright's shifting balance theory	77
6.5 Peak shifts in metapopulations	81
6.6 The importance of peak shifts in evolution	82

Part III Applications: Microevolutionary Dynamics, Quantitative Genetics, and Population Biology

7	Fluctuating Selection and Dynamic Adaptive Landscapes	89
	<i>Ryan Calsbeek, Thomas P. Gosden, Shawn R. Kuchta, and Erik I. Svensson</i>	
7.1	Introduction	89
7.2	Empirical support for shifting landscapes	90
7.2.1	Establishing criteria for demonstrating variation in selection	92
7.3	Frequency-dependent selection	93
7.4	Density-dependence	95
7.5	Competition, predation, or both?	96
7.6	Fluctuations in sexual selection: intergenerational changes in male–male competition and mate choice	97
7.7	Abiotic environmental factors, fluctuating selection, and the limits of ecological speciation	100
7.8	Population variants: genetic morphs and phenotypic plasticity	101
7.9	Conclusions and future directions	103
8	The Adaptive Landscape in Sexual Selection Research	110
	<i>Adam G. Jones, Nicholas L. Ratterman, and Kimberly A. Paczolt</i>	
8.1	Introduction	110
8.2	Sexual selection is selection	110
8.3	The Adaptive Landscape and the individual selection surface	111
8.4	Peculiarities of the Adaptive Landscape in sexual selection research	113
8.5	Achievements of the Adaptive Landscape in sexual selection research	114
8.5.1	The Bateman gradient as the cause of sexual selection	114
8.5.2	The quantification of directional sexual selection on phenotypic traits	115
8.5.3	Non-linear individual selection surfaces	117
8.5.4	Correlational selection	119
8.5.5	Selection on mating preferences	119
8.5.6	Temporal and spatial variation in sexual selection	120
8.5.7	Integrating precopulatory and postcopulatory sexual selection	120
8.6	Conclusions and future directions	122
9	Analyzing and Comparing the Geometry of Individual Fitness Surfaces	126
	<i>Stephen F. Chenoweth, John Hunt, and Howard D. Rundle</i>	
9.1	Introduction	126
9.2	Analysis of the individual fitness surface within a single population	127
9.2.1	Approximating the individual fitness surface using multiple regression	127
9.2.2	Analyzing non-linear selection through canonical analysis	128
9.2.3	Testing the significance of selection gradients and vectors of selection	129
9.2.4	Issues and caveats	130
9.3	Comparing fitness surfaces among groups	131
9.3.1	Testing among-group variation	137

9.3.2	Characterizing among-group differences	139
9.3.3	Issues and caveats	140
9.4	Integrating multivariate selection analyses with evolutionary genetics	141
9.4.1	Model misspecification and the nature of genetic variance under selection	142
9.4.2	The contribution of selection and genetic constraints to adaptive divergence	143
9.5	Future directions	145
10	Adaptive Accuracy and Adaptive Landscapes	150
	<i>Christophe Pélabon, W. Scott Armbruster, Thomas F. Hansen, Geir H. Bolstad, and Rocío Pérez-Barrales</i>	
10.1	Introduction	150
10.2	Theory	152
10.2.1	Adaptive accuracy of a population	152
10.2.2	Adaptive accuracy of the genotype	153
10.2.3	Maladaptation due to variation in the fitness landscape	154
10.2.4	Inaccuracy of focal traits and marginal Adaptive Landscapes	154
10.3	An example from the pollination ecology of <i>Dalechampia</i>	156
10.3.1	Phenotypic selection study in <i>Dalechampia scandens</i>	156
10.3.2	The Adaptive Landscape	159
10.3.3	Adaptive inaccuracy	159
10.4	Final remarks	164
	Acknowledgments	165
11	Empirical Insights into Adaptive Landscapes from Bacterial Experimental Evolution	169
	<i>Tim F. Cooper</i>	
11.1	Introduction	169
11.2	The repeatability of evolution	169
11.2.1	Assessing divergence of replicate populations	169
11.2.2	The effect of environment on between-population divergence	172
11.3	Diversity within populations	173
11.4	Correlation of fitness across environments	174
11.5	Form of Adaptive Landscapes around adaptive peaks	175
11.6	Reversibility	176
11.7	Conclusion	176
12	How Humans Influence Evolution on Adaptive Landscapes	180
	<i>Andrew P. Hendry, Virginie Millien, Andrew Gonzalez, and Hans C. E. Larsson</i>	
12.1	Introduction	180
12.2	Our Adaptive Landscape	181
12.3	Altering evolution on Adaptive Landscapes	184
12.3.1	Topography	184
12.3.2	Dimensionality	186
12.3.3	Phenotypic excursions	187

12.4 Human impacts	188
12.4.1 Invasive species	188
12.4.2 Climate change	190
12.4.3 Hunting and harvesting	191
12.4.4 Habitat loss and fragmentation	192
12.4.5 Habitat quality	194
12.5 What have we gained?	195
12.6 Summary and conclusions	196
Acknowledgments	197
 Part IV Speciation and Macroevolution	
 13 Adaptive Landscapes and Macroevolutionary Dynamics	205
<i>Thomas F. Hansen</i>	
13.1 Introduction	205
13.2 Patterns of evolution	206
13.2.1 Potential for evolution: evolvability and strengths of selection	206
13.2.2 The rate of evolution	209
13.2.3 The rate of adaptation	211
13.3 Processes of evolution	213
13.3.1 Evolution on the Adaptive Landscape	213
13.3.2 Evolution of the Adaptive Landscape	215
13.3.3 A role for constraints?	219
13.4 Final remarks	220
Acknowledgments	221
 14 Adaptive Dynamics: A Framework for Modeling the Long-Term Evolutionary Dynamics of Quantitative Traits	227
<i>Michael Doebeli</i>	
14.1 Introduction	227
14.2 Basics of adaptive dynamics: convergence stability	229
14.3 Basics of adaptive dynamics: evolutionary stability and evolutionary branching	234
14.4 The importance of ecological dynamics	238
14.5 Conclusions	239
 15 Adaptive Landscapes, Evolution, and the Fossil Record	243
<i>Michael A. Bell</i>	
15.1 Evolutionary mechanism and paleontological pattern	243
15.2 Sewall Wright's fitness (genotypic) landscape	243
15.3 G. G. Simpson's Adaptive (phenotypic) Landscape	244
15.4 Paleontology and Adaptive Landscapes	246
15.5 Temporal resolution in paleontology and evolutionary rates in populations	246
15.5.1 The limits of temporal resolution in the stratigraphic and fossil records	246

15.5.2 Simulated rates of species-level morphological evolution	248
15.5.3 Rates of phenotypic evolution in contemporary populations	248
15.6 Application of Adaptive Landscapes in paleontology	248
15.6.1 Evolution of simulated individual lineages on Adaptive Landscapes	248
15.6.2 Ascent of adaptive peaks by an individual fossil lineage	250
15.6.3 Punctuated equilibria and natural selection in sets of fossil lineages	251
15.7 Adaptive Landscapes, evolution, and the fossil record	252
15.8 Conclusions	253
Acknowledgments	254
 Part V Development, Form, and Function	
16 Mimicry, Saltational Evolution, and the Crossing of Fitness Valleys	259
<i>Olof Leimar, Birgitta S. Tullberg, and James Mallet</i>	
16.1 Introduction	259
16.2 Transitions between adaptive peaks	261
16.3 Peak shift in multidimensional trait spaces	261
16.4 Feature-by-feature saltation	262
16.5 Fisherian peak shifting	263
16.6 Wrightian shifts in aposematic coloration	264
16.7 Well-studied cases	265
16.8 Concluding comments	267
Acknowledgments	267
 17 High-Dimensional Adaptive Landscapes Facilitate Evolutionary Innovation	271
<i>Andreas Wagner</i>	
17.1 Introduction	271
17.2 Metabolic network space	272
17.3 From metabolic genotype to phenotype	273
17.4 Exploring metabolic genotype space	274
17.5 Regulatory circuits and novel gene expression patterns	274
17.6 Macromolecules	276
17.7 Genotype networks as a consequence of high dimensionality	277
17.8 Outlook	279
Acknowledgments	280
 18 Phenotype Landscapes, Adaptive Landscapes, and the Evolution of Development	283
<i>Sean H. Rice</i>	
18.1 Introduction	283
18.2 Informal theory	283
18.3 Formal analysis	286

18.4 Reconstructing phenotypic landscapes	290
18.5 Covariance between traits and the evolution of heritability	292

Part VI Concluding Remarks

19 The Past, the Present, and the Future of the Adaptive Landscape 299

Erik I. Svensson and Ryan Calsbeek

19.1 Historical context	299
19.2 Which Adaptive Landscape?	299
19.3 Model or metaphor?	301
19.4 Achievements	301
19.5 Remaining conceptual problems: do we really need Adaptive Landscapes?	302
19.6 Empirical challenges	304
19.7 Alternatives to the Adaptive Landscape	305
19.8 Conclusion and the next 80 years	306
