Four steps to exam success *vii*

First words *viii*

Acknowledgements *xiv*

Chapter 1

Fundamentals of ecology 1

1.1 The species 2

1.2 Ecological niche 7

1.3 Populations, communities, and ecosystems 13

1.4 Notice 17

Chapter 2

Evolution by natural selection 18

2.1 Adaptation and acclimation 19

2.2 Niche and competition 25

2.3 Evolution by natural selection 31

2.4 Neodarwinism 36

2.5 Types of selection 39

Chapter 3

The evolving population 45

3.1 From population to species 46

3.2 Population genetics 47

3.3 Speciation 64

Chapter 4

The ecology of the species 69

4.1 Autecology 70

4.2 Life history and reproductive strategies 72

4.3 Life tables 76

4.4 Models of population growth 81

4.5 Population variability 88

4.6 Other strategies 91

Contents

Chapter 5

Interactions between species 94

5.1 Species interactions 95

5.2 Competition 95

5.3 Consumption 104

5.4 Cooperation 116

5.5 Co-evolution 118

Chapter 6

The ecology of the community 120

6.1 Questions of integration 121

6.2 Succession 125

6.3 Rules of assembly 132

6.4 Species-area relationships 134

Chapter 7

The ecology of the ecosystem 143

7.1 Modelling ecosystem processes 144

7.2 Ecological energetics 148

7.3 Stability and food web structure 158

7.4 The biogeochemical cycles 161

7.5 Biogeochemistry and the global environment 165

Chapter 8

The ecology of the earth 169

8.1 Ecologies of scale 170

8.2 Global gradients of species richness 177

8.3 Regional and landscape ecology 181

8.4 Local gradients and the structure of ecosystems 185

8.5 Global gradients in soil fertility 190

Glossary 193
