Section 1 Introduction to Animal Social Networks 1

1 General introduction 3

Jens Krause, Richard James, Daniel W. Franks, and Darren P. Croft

What is a social network and why is it important? 3

Book structure and content 3

2 A networks primer 5

Richard James

Basics 5

Measuring network structure 6

Node-based measures of structure 6

Network-level measures of structure 7

Clusters or communities 7

Model networks and network models 8

Section 2 Patterns and Processes in Animal Social Networks 9

Darren P. Croft

3 Assortment in social networks and the evolution of cooperation 13

Darren P. Croft, Mathew Edenbrow, and Safi K. Darden

Introduction to cooperation 13

Theoretical work on the evolution of cooperation in structured populations 14

Pathways to assortment by cooperation in social networks 17

Non-random distribution of individuals in space and time 17

Social structuring in the absence of spatial segregation 18

Spatial and temporal assortment by simple behavioural rules 18

Conditional cooperation 20

Cooperation in social networks: conclusions and future directions 22

Acknowledgements 23

4 Mating behaviour: sexual networks and sexual selection	24
Grant C. McDonald and Tommaso Pizzari	
Introduction	24
Sexual selection	24
Sexual selection in structured populations	26
The logic of sexual networks	27
Intrasexual interactions and the measurement of sexual selection	28
Precopulatory selection	30
Postcopulatory selection	30
Intersexual interactions, mating patterns, and the operation of selection	32
Mating system ecology	35
Individual network measures	36
Sexual selection and sexual networks: conclusions	37
Acknowledgements	37
5 Quantifying diffusion in social networks: a Bayesian approach	38
Glenna Nightingale, Neeltje J. Boogert, Kevin N. Laland, and Will Hoppitt	
Introduction to social transmission in groups of animals	38
Network-based diffusion analysis	39
Why do we need Bayesian network-based diffusion analysis?	40
Simulated diffusion data	41
Previous formulation of time of acquisition diffusion analysis	41
Bayesian formulation of time of acquisition diffusion analysis	43
Likelihood function for time of acquisition diffusion analysis	44
Prior specification	44
Generating posteriors using updating methods	45
Model discrimination	45
Results	46
Posterior parameter estimates	46
Markov chain Monte Carlo replication	49
Model discrimination	49
A Bayesian approach to quantifying diffusion on social networks: conclusions and future directions	49
Acknowledgements	52
6 Personality and social network analysis in animals	53
Alexander D. M. Wilson and Jens Krause	
Introduction to personality and social network analysis in animals	53
Network consistency and 'keystone' individuals	54
Fitness consequences of network positions	55
Networks and behavioural types	56
Networks and personality from a developmental perspective	58
Personality and social network analysis in animals: conclusions and future directions	59
Acknowledgements	60

7 Temporal changes in dominance networks and other behaviour sequences	61
David B. McDonald and Michael E. Dillon	
Introduction to the analysis of temporal changes in networks	61
Network formulation and triad census approach	63
Ranking algorithms	63
R scripts for analysing dominance data	65
Differences among ranking algorithms	65
Effect of contest order on Elo ranking	65
Comparing contest and outcome adjacency matrices over time	68
Analysing the contest matrix by quartiles	68
Analysing the outcome matrix by quartiles	70
Experimental and modelling approaches: conclusions and future directions	71
<i>Acknowledgements</i>	72
8 Group movement and animal social networks	73
Nikolai W. F. Bode, A. Jamie Wood, and Daniel W. Franks	
Introduction to group movement and animal social networks	73
Population level	75
Group level	77
Individual level	80
Group movement and animal social networks: conclusions and future directions	81
<i>Acknowledgements</i>	83
9 Communication and social networks	84
Peter K. McGregor and Andrew G. Horn	
Introduction to communication and social networks	84
Communication and network approaches	84
Signals, information, and communication	85
Information exchange and communication networks	85
Receiver diversity and communication in networks	86
Empirical successes of the communication network approach	87
Eavesdropping	87
Audience effects	89
Alarm call spread	90
Linking communication networks to social networks	91
Signals as methodological tools for studying social networks	91
Mapping communication networks as social networks	92
Communication networks and information flow	92
Communication and social networks: conclusions and future directions	94
10 Disease transmission in animal social networks	95
Julian A. Drewe and Sarah E. Perkins	
Introduction to disease transmission networks	95
The use of animal social networks to study infectious disease transmission	96
Networks and disease management	97

Collecting social network data to study disease transmission	97
How many host-parasite associations should be included in a transmission network?	98
Sampling considerations and the boundary effect	100
Weighted or unweighted networks: capturing transmission processes?	100
Choice of time interval for constructing parasite transmission networks	101
Data analysis: which network measures are relevant to disease transmission?	105
Network centrality and disease transmission	106
Relationships between network measures and host attributes	107
Disease transmission network dynamics	107
Host and parasite-driven parameters in transmission networks	107
Effects of infection on networks	108
Disease transmission in animal social networks: conclusions and future directions	109
11 Social networks and animal welfare	111
Brianna A. Beisner and Brenda McCowan	
Introduction to the use of social network analysis in animal welfare	111
Physical health in animal social networks	113
Disease transmission in animal networks	113
Psychological and social health in animal networks	116
Social aggression in animal social networks	116
Social stress and health in animal social networks	119
Social network analysis in animal welfare: conclusions and future directions	121
Acknowledgements	121
 Section 3 Taxonomic Overviews of Animal Social Networks	 123
Jens Krause	
12 Primate social networks	125
Sally Macdonald and Bernhard Voelkl	
Introduction to social network analysis in primatology	125
Why is social network analysis useful for primatologists?	125
A brief history of social network analysis in primatology	126
Levels of primate social network analysis	129
Primate social network analysis at the individual level	129
Primate social network analysis at the subgroup level	130
Primate social network analysis at the group level	131
Potential pitfalls and limitations in primate social networks	132
Group size in primate networks	132
Observation frequency in primate social networks	133
Specificity in primate social networks	134
Intraspecific variability in primate social networks	134
Social network analysis in primatology: conclusions and future directions	136
Acknowledgements	138

13 Oceanic societies: studying cetaceans with a social networks approach	139
Shane Gero and Luke Rendell	
Introduction to network analysis of cetacean societies	139
Oceanic social networks	139
Studying cetaceans using a social network approach	142
Identifying individuals in cetacean social networks	143
Interactions between individuals in cetacean social networks	143
Contributions from studies on cetaceans	143
Methodological advances in studying cetacean social networks	143
Cetacean networks and management: resilience and survival	144
Social roles and decision making in cetacean social networks	145
Drivers of network structure in cetacean societies	145
Cultural transmission and cetacean social networks	146
Social networks and communication networks among cetaceans	147
Current challenges and avenues for inquiry concerning cetacean social networks	147
Linking cetacean social networks with vocal complexity	147
Cetacean social network analysis: beyond associations	148
Collective motion and decision making in cetacean societies	148
Network analysis of cetacean societies: conclusions and future directions	149
<i>Acknowledgements</i>	149
14 The network approach in teleost fishes and elasmobranchs	150
Jens Krause, Darren P. Croft, and Alexander D. M. Wilson	
Introduction to networks in teleost fishes and elasmobranchs	150
Population structure of teleost fishes and elasmobranchs	151
Techniques for identifying individuals in teleost fishes and elasmobranchs	151
Guppies and sticklebacks—a case study	153
Outlook for population applications of social network studies	153
Familiarity and site fidelity in teleost fish and elasmobranchs	154
Cooperation in teleost fishes	155
Fish cognition and social learning	155
Collective behaviour and social networks in teleost fishes	156
Application of social network analysis to welfare in teleost fishes	156
Network analysis of teleost fishes and elasmobranchs: conclusions and future directions	158
<i>Acknowledgements</i>	159
15 Social networks in insect colonies	160
Dhruba Naug	
Introduction	160
Social interactions and their proximate basis	161
Structure of the colony interaction network	162
Function of the colony interaction network	164
Information collection and transfer	164
Colony work organization	165
Material transport	167
Conclusions and future directions	169

16 Perspectives on social network analyses of bird populations**171**

Colin J. Garroway, Reinder Radersma, and Camilla A. Hinde

Introduction to social network analysis in birds	171
Building avian social networks	173
Ring and observation in avian social networks	173
Passive integrated transponder tags in the study of avian social networks	175
Telemetry tracking in the study of avian social networks	176
Choosing the best method for studying avian social networks	177
Exploring avian social networks	177
Social network analysis of avian societies	179
Eco-evolutionary processes affected by the structure of avian societies	179
Social phenotypes and gene $\times$ environment interactions in avian societies	179
The social characteristics of individuals, and emergent network structure in avian societies	180
The role of social context in natural and sexual selection in avian societies	180
Underlying social structure and collective behaviour in avian societies	180
Individual interactions and social structure in avian societies	181
The conservation and management of social units in avian societies	181
Genetic determinants of variation in social phenotypes in avian societies	182
The interaction of genetic and social structures in avian societies	182
Social network analysis in birds: conclusions and future directions	183
Acknowledgements	183

17 Networks of terrestrial ungulates: linking form and function**184**

Daniel I. Rubenstein

Introduction to terrestrial ungulate social networks	184
The play and the players in terrestrial ungulate social systems	184
The script, the data, and methodologies for ungulate social systems	185
Equids as model organisms	187
Similar social structures but different social networks among equids	188
Fission-fusion functionality in hierarchical equid societies	188
Identifying communities among equid societies	189
Structure shapes function in equid societies	191
Generalizing to other ungulates	192
Wild and free-ranging ungulate species	192
Domestic and captive animals	194
Terrestrial ungulate social networks: conclusions and future directions	194
Acknowledgements	196

18 Linking lizards: social networks in reptiles**197**

Stephanie S. Godfrey

Introduction to social networks in reptiles	197
The application of social networks to understanding reptile behavioural ecology	197
Detecting and describing social organization in reptiles	198
What shapes social organization in reptiles?	199
Thermal and ecological requirements for reptiles	199

Genetic structure and kin-based sociality in reptiles	200
Proximate mechanisms of social organization in reptiles	200
Visual and olfactory signalling and communication pathways in reptiles	200
Individual differences and network position in reptile societies	201
Consequences of social networks: parasite transmission among reptiles	201
Advantages of using networks in understanding reptile systems	202
Challenges of applying a network approach to reptiles	203
Marking, identifying, and monitoring reptiles	204
Identification of reptiles upon capture	204
Visual identification of reptiles	204
Remote monitoring of associations among reptiles	205
Social networks in reptiles: conclusions and future directions	207
Acknowledgements	207

Section 4 Animal Social Networks: Conclusions 209

19 Animal social networks: general conclusions 211

Jens Krause, Richard James, Daniel W. Franks, and Darren P. Croft

The changing nature of animal social network data 212

The changing nature of animal social network analysis 213
