

Contents

Preface vii

- 1 The Importance of Comparison 1
 - 2 Basic Phylogenetic Concepts and "Tree Thinking" 20
 - 3 Reconstructing Ancestral States for Discrete Traits 52
 - 4 Reconstructing Ancestral States for Quantitative Traits 79
 - 5 Modeling Evolutionary Change 98
 - 6 Correlated Evolution and Testing Adaptive Hypotheses 126
 - 7 Comparative Methods to Detect Correlated Evolutionary Change 148
 - 8 Using Trees to Study Biological and Cultural Diversification 180
 - 9 Size, Allometry, and Phylogeny 202
 - 10 Human Cultural Traits and Linguistic Evolution 227
 - 11 Behavior, Ecology, and Conservation of Biological and Cultural Diversity 255
 - 12 Investigating Evolutionary Singularities 280
 - 13 Developing a Comparative Database and Targeting Future Data Collection 299
 - 14 Conclusions and Future Directions 317
-
