

Detailed Contents

1 Introduction: Themes in the Study of Life 1

OVERVIEW Inquiring About the World of Life 1

CONCEPT 1.1 Themes connect the concepts of biology 3

Evolution, the Overarching Theme of Biology 3

Theme: New properties emerge at each level in the biological hierarchy 3

Theme: Organisms interact with their environments, exchanging matter and energy 6

Theme: Structure and function are correlated at all levels of biological organization 7

Theme: Cells are an organism's basic units of structure and function 7

Theme: The continuity of life is based on heritable information in the form of DNA 8

Theme: Feedback mechanisms regulate biological systems 11

CONCEPT 1.2 *The Core Theme:* Evolution accounts for the unity and diversity of life 12

Organizing the Diversity of Life 12

Charles Darwin and the Theory of Natural Selection 14

The Tree of Life 16

CONCEPT 1.3 Scientists use two main forms of inquiry in their study of nature 18

Discovery Science 18

Hypothesis-Based Science 19

A Case Study in Scientific Inquiry: Investigating Mimicry in Snake Populations 20

Limitations of Science 22

Theories in Science 23

Model Building in Science 23

The Culture of Science 23

Science, Technology, and Society 24

UNIT ONE Interview with Deborah M. Gordon

The Chemistry of Life 28

2 The Chemical Context of Life 30

OVERVIEW A Chemical Connection to Biology 30

CONCEPT 2.1 Matter consists of chemical elements in pure form and in combinations called compounds 31

Elements and Compounds 31

Essential Elements of Life 32

CONCEPT 2.2 An element's properties depend on the structure of its atoms 32

Subatomic Particles 32

Atomic Number and Atomic Mass 33

Isotopes 33

The Energy Levels of Electrons 35

Electron Distribution and Chemical Properties 35

Electron Orbitals 36

CONCEPT 2.3 The formation and function of molecules depend on chemical bonding between atoms 38

Covalent Bonds 38

Ionic Bonds 39

Weak Chemical Bonds 40

Molecular Shape and Function 41

CONCEPT 2.4 Chemical reactions make and break chemical bonds 42

3 Water and the Fitness of the Environment 46

OVERVIEW The Molecule That Supports All of Life 46

CONCEPT 3.1 The polarity of water molecules results in hydrogen bonding 46

CONCEPT 3.2 Four emergent properties of water contribute to Earth's fitness for life 47

Cohesion 47

Moderation of Temperature 48

Insulation of Bodies of Water by Floating Ice 49

The Solvent of Life 50

CONCEPT 3.3 Acidic and basic conditions affect living organisms 52

Effects of Changes in pH 52

Threats to Water Quality on Earth 54

4 Carbon and the Molecular Diversity of Life 58

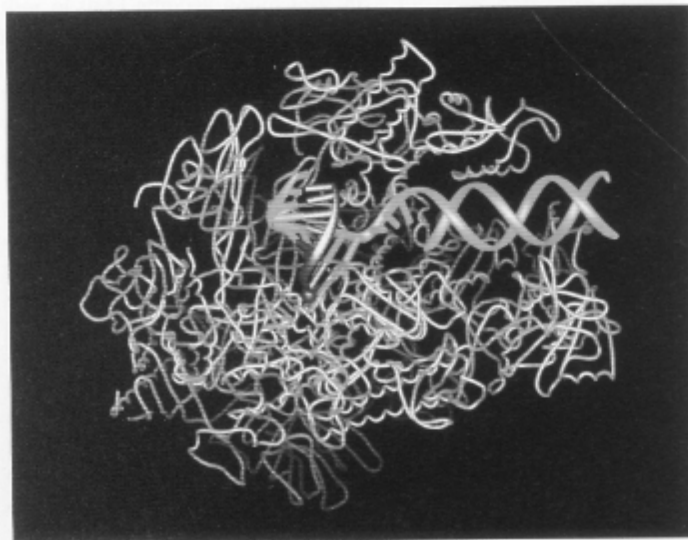

OVERVIEW Carbon: The Backbone of Life 58

CONCEPT 4.1 Organic chemistry is the study of carbon compounds 58

CONCEPT 4.2 Carbon atoms can form diverse molecules by bonding to four other atoms 60

The Formation of Bonds with Carbon 60

Molecular Diversity Arising from Carbon Skeleton Variation 61

CONCEPT 4.3 A small number of chemical groups are key to the functioning of biological molecules 63
 The Chemical Groups Most Important in the Processes of Life 63
 ATP: An Important Source of Energy for Cellular Processes 66
 The Chemical Elements of Life: A Review 66

5 The Structure and Function of Large Biological Molecules 68

OVERVIEW The Molecules of Life 68

CONCEPT 5.1 Macromolecules are polymers, built from monomers 68

The Synthesis and Breakdown of Polymers 68
 The Diversity of Polymers 69

CONCEPT 5.2 Carbohydrates serve as fuel and building material 69

Sugars 69
 Polysaccharides 71

CONCEPT 5.3 Lipids are a diverse group of hydrophobic molecules 74

Fats 75
 Phospholipids 76
 Steroids 77

CONCEPT 5.4 Proteins have many structures, resulting in a wide range of functions 77

Polypeptides 78
 Protein Structure and Function 80

CONCEPT 5.5 Nucleic acids store and transmit hereditary information 86

The Roles of Nucleic Acids 86
 The Structure of Nucleic Acids 87
 The DNA Double Helix 88
 DNA and Proteins as Tape Measures of Evolution 89
 The Theme of Emergent Properties in the Chemistry of Life: A Review 89

UNIT TWO Interview with Paul Nurse

The Cell 92

6 A Tour of the Cell 94

OVERVIEW The Fundamental Units of Life 94

CONCEPT 6.1 To study cells, biologists use microscopes and the tools of biochemistry 94

Microscopy 95
 Cell Fractionation 97

CONCEPT 6.2 Eukaryotic cells have internal membranes that compartmentalize their functions 98

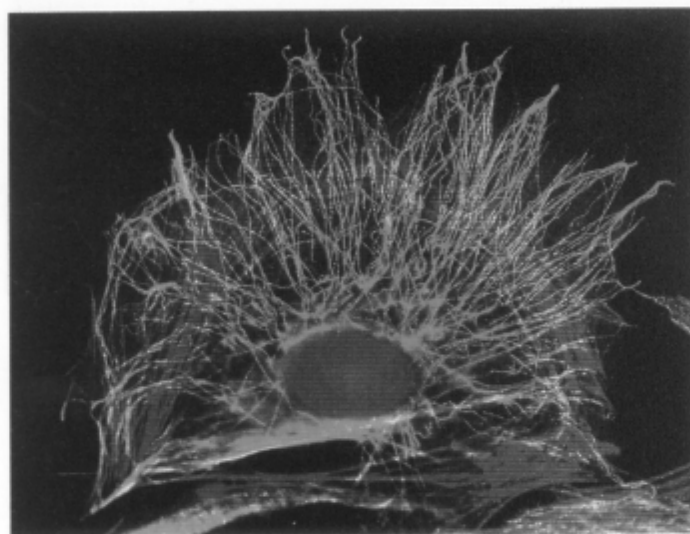

Comparing Prokaryotic and Eukaryotic Cells 98
 A Panoramic View of the Eukaryotic Cell 99

CONCEPT 6.3 The eukaryotic cell's genetic instructions are housed in the nucleus and carried out by the ribosomes 102

The Nucleus: Information Central 102
 Ribosomes: Protein Factories 102

CONCEPT 6.4 The endomembrane system regulates protein traffic and performs metabolic functions in the cell 104

The Endoplasmic Reticulum: Biosynthetic Factory 104
 The Golgi Apparatus: Shipping and Receiving Center 105
 Lysosomes: Digestive Compartments 107

Vacuoles: Diverse Maintenance Compartments 108
 The Endomembrane System: A Review 108

CONCEPT 6.5 Mitochondria and chloroplasts change energy from one form to another 109

Mitochondria: Chemical Energy Conversion 109
 Chloroplasts: Capture of Light Energy 110
 Peroxisomes: Oxidation 110

CONCEPT 6.6 The cytoskeleton is a network of fibers that organizes structures and activities in the cell 112

Roles of the Cytoskeleton: Support, Motility, and Regulation 112
 Components of the Cytoskeleton 113

CONCEPT 6.7 Extracellular components and connections between cells help coordinate cellular activities 118

Cell Walls of Plants 118
 The Extracellular Matrix (ECM) of Animal Cells 119
 Intercellular Junctions 120
 The Cell: A Living Unit Greater Than the Sum of Its Parts 122

7 Membrane Structure and Function 125

OVERVIEW Life at the Edge 125

CONCEPT 7.1 Cellular membranes are fluid mosaics of lipids and proteins 125

Membrane Models: *Scientific Inquiry* 126
 The Fluidity of Membranes 127
 Membrane Proteins and Their Functions 128
 The Role of Membrane Carbohydrates in Cell-Cell Recognition 130
 Synthesis and Sidedness of Membranes 130

CONCEPT 7.2 Membrane structure results in selective permeability 131

The Permeability of the Lipid Bilayer 131
 Transport Proteins 131

CONCEPT 7.3 Passive transport is diffusion of a substance across a membrane with no energy investment 132

Effects of Osmosis on Water Balance 133
 Facilitated Diffusion: Passive Transport Aided by Proteins 134

CONCEPT 7.4 Active transport uses energy to move solutes against their gradients 135

The Need for Energy in Active Transport 135

How Ion Pumps Maintain Membrane Potential 136
Cotransport: Coupled Transport by a Membrane Protein 137

CONCEPT 7.5 Bulk transport across the plasma membrane occurs by exocytosis and endocytosis 138

Exocytosis 138
Endocytosis 138

8 An Introduction to Metabolism 142

OVERVIEW The Energy of Life 142

CONCEPT 8.1 An organism's metabolism transforms matter and energy, subject to the laws of thermodynamics 142

Organization of the Chemistry of Life into Metabolic Pathways 142

Forms of Energy 143

The Laws of Energy Transformation 144

CONCEPT 8.2 The free-energy change of a reaction tells us whether or not the reaction occurs spontaneously 146

Free-Energy Change, ΔG 146

Free Energy, Stability, and Equilibrium 146

Free Energy and Metabolism 147

CONCEPT 8.3 ATP powers cellular work by coupling exergonic reactions to endergonic reactions 149

The Structure and Hydrolysis of ATP 149

How ATP Performs Work 150

The Regeneration of ATP 150

CONCEPT 8.4 Enzymes speed up metabolic reactions by lowering energy barriers 151

The Activation Energy Barrier 152

How Enzymes Lower the E_A Barrier 153

Substrate Specificity of Enzymes 153

Catalysis in the Enzyme's Active Site 154

Effects of Local Conditions on Enzyme Activity 155

CONCEPT 8.5 Regulation of enzyme activity helps control metabolism 157

Allosteric Regulation of Enzymes 157

Specific Localization of Enzymes Within the Cell 159

9 Cellular Respiration: Harvesting Chemical Energy 162

OVERVIEW Life Is Work 162

CONCEPT 9.1 Catabolic pathways yield energy by oxidizing organic fuels 162

Catabolic Pathways and Production of ATP 163

Redox Reactions: Oxidation and Reduction 163

The Stages of Cellular Respiration: *A Preview* 166

CONCEPT 9.2 Glycolysis harvests chemical energy by oxidizing glucose to pyruvate 167

CONCEPT 9.3 The citric acid cycle completes the energy-yielding oxidation of organic molecules 170

CONCEPT 9.4 During oxidative phosphorylation, chemiosmosis couples electron transport to ATP synthesis 172

The Pathway of Electron Transport 172

Chemiosmosis: The Energy-Coupling Mechanism 173

An Accounting of ATP Production by Cellular Respiration 176

CONCEPT 9.5 Fermentation and anaerobic respiration enable cells to produce ATP without the use of oxygen 177

Types of Fermentation 178

Fermentation and Aerobic Respiration Compared 179

The Evolutionary Significance of Glycolysis 179

CONCEPT 9.6 Glycolysis and the citric acid cycle connect to many other metabolic pathways 180

The Versatility of Catabolism 180

Biosynthesis (Anabolic Pathways) 180

Regulation of Cellular Respiration via Feedback Mechanisms 181

10 Photosynthesis 185

OVERVIEW The Process That Feeds the Biosphere 185

CONCEPT 10.1 Photosynthesis converts light energy to the chemical energy of food 186

Chloroplasts: The Sites of Photosynthesis in Plants 186

Tracking Atoms Through Photosynthesis:

Scientific Inquiry 187

The Two Stages of Photosynthesis: *A Preview* 188

CONCEPT 10.2 The light reactions convert solar energy to the chemical energy of ATP and NADPH 190

The Nature of Sunlight 190

Photosynthetic Pigments: The Light Receptors 190

Excitation of Chlorophyll by Light 192

A Photosystem: A Reaction-Center Complex

Associated with Light-Harvesting Complexes 193

Linear Electron Flow 194

Cyclic Electron Flow 195

A Comparison of Chemiosmosis in Chloroplasts and Mitochondria 196

CONCEPT 10.3 The Calvin cycle uses ATP and NADPH to convert CO_2 to sugar 198

CONCEPT 10.4 Alternative mechanisms of carbon fixation have evolved in hot, arid climates 200

Photorespiration: An Evolutionary Relic? 200

C_4 Plants 200

CAM Plants 201

The Importance of Photosynthesis: *A Review* 202

11 Cell Communication 206

OVERVIEW The Cellular Internet 206

CONCEPT 11.1 External signals are converted to responses within the cell 206

Evolution of Cell Signaling 206

Local and Long-Distance Signaling 208

The Three Stages of Cell Signaling: *A Preview* 209

CONCEPT 11.2 Reception: A signal molecule binds to a receptor protein, causing it to change shape 210

Receptors in the Plasma Membrane 210

Intracellular Receptors 210

CONCEPT 11.3 Transduction: Cascades of molecular interactions relay signals from receptors to target molecules in the cell 214

Signal Transduction Pathways 214

Protein Phosphorylation and Dephosphorylation 214

Small Molecules and Ions as Second Messengers 215

CONCEPT 11.4 Response: Cell signaling leads to regulation of transcription or cytoplasmic activities 218

Nuclear and Cytoplasmic Responses 218

Fine-Tuning of the Response 221

CONCEPT 11.5 Apoptosis (programmed cell death) integrates multiple cell-signaling pathways 223

Apoptosis in the Soil Worm *Caenorhabditis elegans* 223

Apoptotic Pathways and the Signals That Trigger Them 224

12 The Cell Cycle 228

OVERVIEW The Key Roles of Cell Division 228

CONCEPT 12.1 Cell division results in genetically identical daughter cells 229

Cellular Organization of the Genetic Material 229
Distribution of Chromosomes During Eukaryotic Cell Division 229

CONCEPT 12.2 The mitotic phase alternates with interphase in the cell cycle 230

Phases of the Cell Cycle 231
The Mitotic Spindle: A Closer Look 231
Cytokinesis: A Closer Look 234
Binary Fission 236
The Evolution of Mitosis 237

CONCEPT 12.3 The eukaryotic cell cycle is regulated by a molecular control system 238

Evidence for Cytoplasmic Signals 238
The Cell Cycle Control System 238
Loss of Cell Cycle Controls in Cancer Cells 242

UNIT THREE

Interview with Terry L. Orr-Weaver

Genetics 246

13 Meiosis and Sexual Life Cycles 248

OVERVIEW Variations on a Theme 248

CONCEPT 13.1 Offspring acquire genes from parents by inheriting chromosomes 248

Inheritance of Genes 249
Comparison of Asexual and Sexual Reproduction 249

CONCEPT 13.2 Fertilization and meiosis alternate in sexual life cycles 250

Sets of Chromosomes in Human Cells 250
Behavior of Chromosome Sets in the Human Life Cycle 251
The Variety of Sexual Life Cycles 252

CONCEPT 13.3 Meiosis reduces the number of chromosome sets from diploid to haploid 253

The Stages of Meiosis 253
A Comparison of Mitosis and Meiosis 257

CONCEPT 13.4 Genetic variation produced in sexual life cycles contributes to evolution 258

Origins of Genetic Variation Among Offspring 258
The Evolutionary Significance of Genetic Variation Within Populations 260

14 Mendel and the Gene Idea 262

OVERVIEW Drawing from the Deck of Genes 262

CONCEPT 14.1 Mendel used the scientific approach to identify two laws of inheritance 262

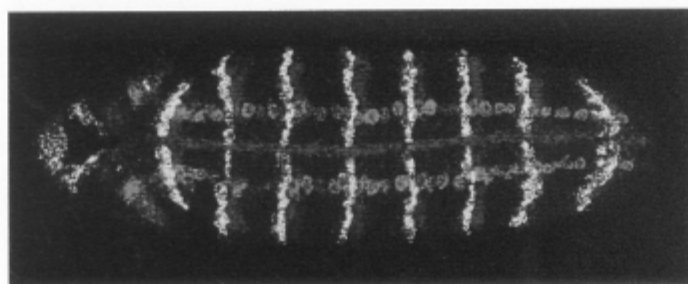

Mendel's Experimental, Quantitative Approach 262
The Law of Segregation 264
The Law of Independent Assortment 268

CONCEPT 14.2 The laws of probability govern Mendelian inheritance 269

The Multiplication and Addition Rules Applied to Monohybrid Crosses 269
Solving Complex Genetics Problems with the Rules of Probability 270

CONCEPT 14.3 Inheritance patterns are often more complex than predicted by simple Mendelian genetics 271

Extending Mendelian Genetics for a Single Gene 271
Extending Mendelian Genetics for Two or More Genes 273
Nature and Nurture: The Environmental Impact on Phenotype 274

Integrating a Mendelian View of Heredity and Variation 275

CONCEPT 14.4 Many human traits follow Mendelian patterns of inheritance 276

Pedigree Analysis 276
Recessively Inherited Disorders 277
Dominantly Inherited Disorders 278
Multifactorial Disorders 279
Genetic Testing and Counseling 279

15 The Chromosomal Basis of Inheritance 286

OVERVIEW Locating Genes Along Chromosomes 286

CONCEPT 15.1 Mendelian inheritance has its physical basis in the behavior of chromosomes 286

Morgan's Experimental Evidence: *Scientific Inquiry* 288

CONCEPT 15.2 Sex-linked genes exhibit unique patterns of inheritance 289

The Chromosomal Basis of Sex 289
Inheritance of Sex-Linked Genes 290
X Inactivation in Female Mammals 291

CONCEPT 15.3 Linked genes tend to be inherited together because they are located near each other on the same chromosome 292

How Linkage Affects Inheritance 292
Genetic Recombination and Linkage 293
Mapping the Distance Between Genes Using Recombination Data: *Scientific Inquiry* 294

CONCEPT 15.4 Alterations of chromosome number or structure cause some genetic disorders 297

Abnormal Chromosome Number 297
Alterations of Chromosome Structure 298
Human Disorders Due to Chromosomal Alterations 299

CONCEPT 15.5 Some inheritance patterns are exceptions to the standard chromosome theory 300

Genomic Imprinting 300
Inheritance of Organelle Genes 301

16 The Molecular Basis of Inheritance 305

OVERVIEW Life's Operating Instructions 305

CONCEPT 16.1 DNA is the genetic material 305

The Search for the Genetic Material: *Scientific Inquiry* 305
Building a Structural Model of DNA: *Scientific Inquiry* 308

CONCEPT 16.2 Many proteins work together in DNA replication and repair 311

The Basic Principle: Base Pairing to a Template Strand 311
DNA Replication: A Closer Look 312
Proofreading and Repairing DNA 316
Replicating the Ends of DNA Molecules 318

CONCEPT 16.3 A chromosome consists of a DNA molecule packed together with proteins 320

17 From Gene to Protein 325

OVERVIEW The Flow of Genetic Information 325

CONCEPT 17.1 Genes specify proteins via transcription and translation 325

Evidence from the Study of Metabolic Defects 325

Basic Principles of Transcription and Translation 328

The Genetic Code 328

CONCEPT 17.2 Transcription is the DNA-directed synthesis of RNA: a closer look 331

Molecular Components of Transcription 331

Synthesis of an RNA Transcript 332

CONCEPT 17.3 Eukaryotic cells modify RNA after transcription 334

Alteration of mRNA Ends 334

Split Genes and RNA Splicing 334

CONCEPT 17.4 Translation is the RNA-directed synthesis of a polypeptide: a closer look 337

Molecular Components of Translation 337

Building a Polypeptide 340

Completing and Targeting the Functional Protein 342

CONCEPT 17.5 Point mutations can affect protein structure and function 344

Types of Point Mutations 344

Mutagens 346

CONCEPT 17.6 While gene expression differs among the domains of life, the concept of a gene is universal 346

Comparing Gene Expression in Bacteria, Archaea, and Eukarya 346

What Is a Gene? *Revisiting the Question* 347

18 Regulation of Gene Expression 351

OVERVIEW Conducting the Genetic Orchestra 351

CONCEPT 18.1 Bacteria often respond to environmental change by regulating transcription 351

Operons: The Basic Concept 352

Repressible and Inducible Operons: Two Types of

Negative Gene Regulation 353

Positive Gene Regulation 355

CONCEPT 18.2 Eukaryotic gene expression can be regulated at any stage 356

Differential Gene Expression 356

Regulation of Chromatin Structure 356

Regulation of Transcription Initiation 358

Mechanisms of Post-Transcriptional Regulation 362

CONCEPT 18.3 Noncoding RNAs play multiple roles in controlling gene expression 364

Effects on mRNAs by MicroRNAs and Small Interfering RNAs 365

Chromatin Remodeling and Silencing of Transcription by Small RNAs 366

CONCEPT 18.4 A program of differential gene expression leads to the different cell types in a multicellular organism 366

A Genetic Program for Embryonic Development 366

Cytoplasmic Determinants and Inductive Signals 367

Sequential Regulation of Gene Expression During Cellular Differentiation 368

Pattern Formation: Setting Up the Body Plan 369

CONCEPT 18.5 Cancer results from genetic changes that affect cell cycle control 373

Types of Genes Associated with Cancer 373

Interference with Normal Cell-Signaling Pathways 374

The Multistep Model of Cancer Development 376

Inherited Predisposition and Other Factors

Contributing to Cancer 377

19 Viruses 381

OVERVIEW A Borrowed Life 381

CONCEPT 19.1 A virus consists of a nucleic acid surrounded by a protein coat 381

The Discovery of Viruses: *Scientific Inquiry* 381

Structure of Viruses 382

CONCEPT 19.2 Viruses reproduce only in host cells 384

General Features of Viral Reproductive Cycles 384

Reproductive Cycles of Phages 385

Reproductive Cycles of Animal Viruses 387

Evolution of Viruses 390

CONCEPT 19.3 Viruses, viroids, and prions are formidable pathogens in animals and plants 390

Viral Diseases in Animals 390

Emerging Viruses 391

Viral Diseases in Plants 393

Viroids and Prions: The Simplest Infectious Agents 393

20 Biotechnology 396

OVERVIEW The DNA Toolbox 396

CONCEPT 20.1 DNA cloning yields multiple copies of a gene or other DNA segment 396

DNA Cloning and Its Applications: *A Preview* 397

Using Restriction Enzymes to Make Recombinant DNA 398

Cloning a Eukaryotic Gene in a Bacterial Plasmid 398

Expressing Cloned Eukaryotic Genes 403

Amplifying DNA *in Vitro*: The Polymerase Chain Reaction (PCR) 403

CONCEPT 20.2 DNA technology allows us to study the sequence, expression, and function of a gene 405

Gel Electrophoresis and Southern Blotting 405

DNA Sequencing 409

Analyzing Gene Expression 409

Determining Gene Function 411

CONCEPT 20.3 Cloning organisms may lead to production of stem cells for research and other applications 412

Cloning Plants: Single-Cell Cultures 412

Cloning Animals: Nuclear Transplantation 412

Stem Cells of Animals 415

CONCEPT 20.4 The practical applications of DNA technology affect our lives in many ways 416

Medical Applications 416

Forensic Evidence and Genetic Profiles 419

Environmental Cleanup 420

Agricultural Applications 421

Safety and Ethical Questions Raised by DNA Technology 422

21 Genomes and Their Evolution 426

OVERVIEW Reading the Leaves from the Tree of Life 426

CONCEPT 21.1 New approaches have accelerated the pace of genome sequencing 427

Three-Stage Approach to Genome Sequencing 427

Whole-Genome Shotgun Approach to Genome Sequencing 428

CONCEPT 21.2 Scientists use bioinformatics to analyze genomes and their functions 429

Centralized Resources for Analyzing Genome Sequences 429

Identifying Protein-Coding Genes Within DNA Sequences 429

Understanding Genes and Their Products at the Systems Level 431

CONCEPT 21.3 Genomes vary in size, number of genes, and gene density 432

Genome Size 432

Number of Genes 432

Gene Density and Noncoding DNA 433

CONCEPT 21.4 Multicellular eukaryotes have much noncoding DNA and many multigene families 434

Transposable Elements and Related Sequences 435

Other Repetitive DNA, Including Simple Sequence DNA 436

Genes and Multigene Families 436

CONCEPT 21.5 Duplication, rearrangement, and mutation of DNA contribute to genome evolution 438

Duplication of Entire Chromosome Sets 438

Alterations of Chromosome Structure 438

Duplication and Divergence of Gene-Sized Regions of DNA 439

Rearrangements of Parts of Genes: Exon Duplication and Exon Shuffling 440

How Transposable Elements Contribute to Genome Evolution 441

CONCEPT 21.6 Comparing genome sequences provides clues to evolution and development 442

Comparing Genomes 442

Comparing Developmental Processes 445

UNIT FOUR Interview with Scott V. Edwards

Mechanisms of Evolution 450

22 Descent with Modification:

A Darwinian View of Life 452

OVERVIEW Endless Forms Most Beautiful 452

CONCEPT 22.1 The Darwinian revolution challenged traditional views of a young Earth inhabited by unchanging species 452

Scala Naturae and Classification of Species 453

Ideas About Change over Time 453

Lamarck's Hypothesis of Evolution 454

CONCEPT 22.2 Descent with modification by natural selection explains the adaptations of organisms and the unity and diversity of life 455

Darwin's Research 455

The Origin of Species 457

CONCEPT 22.3 Evolution is supported by an overwhelming amount of scientific evidence 460

Direct Observations of Evolutionary Change 460

The Fossil Record 461

Homology 463

Biogeography 465

What Is Theoretical About Darwin's View of Life? 465

23 The Evolution of Populations 468

OVERVIEW The Smallest Unit of Evolution 468

CONCEPT 23.1 Mutation and sexual reproduction produce the genetic variation that makes evolution possible 468

Genetic Variation 469

Mutation 470

Sexual Reproduction 471

CONCEPT 23.2 The Hardy-Weinberg equation can be used to test whether a population is evolving 472

Gene Pools and Allele Frequencies 472

The Hardy-Weinberg Principle 472

CONCEPT 23.3 Natural selection, genetic drift, and gene flow can alter allele frequencies in a population 475

Natural Selection 475

Genetic Drift 475

Gene Flow 478

CONCEPT 23.4 Natural selection is the only mechanism that consistently causes adaptive evolution 479

A Closer Look at Natural Selection 479

The Key Role of Natural Selection in Adaptive Evolution 481

Sexual Selection 481

The Preservation of Genetic Variation 483

Why Natural Selection Cannot Fashion Perfect Organisms 484

24 The Origin of Species 487

OVERVIEW That "Mystery of Mysteries" 487

CONCEPT 24.1 The biological species concept emphasizes reproductive isolation 487

The Biological Species Concept 488

Other Definitions of Species 492

CONCEPT 24.2 Speciation can take place with or without geographic separation 492

Allopatric ("Other Country") Speciation 492

Sympatric ("Same Country") Speciation 495

Allopatric and Sympatric Speciation: A Review 497

CONCEPT 24.3 Hybrid zones provide opportunities to study factors that cause reproductive isolation 498

Patterns Within Hybrid Zones 498

Hybrid Zones over Time 499

CONCEPT 24.4 Speciation can occur rapidly or slowly and can result from changes in few or many genes 501

The Time Course of Speciation 502

Studying the Genetics of Speciation 503

From Speciation to Macroevolution 504

25 The History of Life on Earth 507

OVERVIEW Lost Worlds 507

CONCEPT 25.1 Conditions on early Earth made the origin of life possible 507

- Synthesis of Organic Compounds on Early Earth 508
- Abiotic Synthesis of Macromolecules 509
- Protobionts 509
- Self-Replicating RNA and the Dawn of Natural Selection 509

CONCEPT 25.2 The fossil record documents the history of life 510

- The Fossil Record 510
- How Rocks and Fossils Are Dated 510
- The Origin of New Groups of Organisms 512

CONCEPT 25.3 Key events in life's history include the origins of single-celled and multicelled organisms and the colonization of land 514

- The First Single-Celled Organisms 514
- The Origin of Multicellularity 517
- The Colonization of Land 518

CONCEPT 25.4 The rise and fall of dominant groups reflect continental drift, mass extinctions, and adaptive radiations 519

- Continental Drift 519
- Mass Extinctions 521
- Adaptive Radiations 523

CONCEPT 25.5 Major changes in body form can result from changes in the sequences and regulation of developmental genes 525

- Evolutionary Effects of Developmental Genes 525
- The Evolution of Development 527

CONCEPT 25.6 Evolution is not goal oriented 529

- Evolutionary Novelty 529
- Evolutionary Trends 530

UNIT FIVE Interview with Sean B. Carroll

The Evolutionary History of Biological Diversity 534

26 Phylogeny and the Tree of Life 536

OVERVIEW Investigating the Tree of Life 536

CONCEPT 26.1 Phylogenies show evolutionary relationships 537

- Binomial Nomenclature 537
- Hierarchical Classification 537
- Linking Classification and Phylogeny 538
- What We Can and Cannot Learn from Phylogenetic Trees 539
- Applying Phylogenies 539

CONCEPT 26.2 Phylogenies are inferred from morphological and molecular data 540

- Morphological and Molecular Homologies 540
- Sorting Homology from Analogy 540
- Evaluating Molecular Homologies 541

CONCEPT 26.3 Shared characters are used to construct phylogenetic trees 542

- Cladistics 542
- Phylogenetic Trees with Proportional Branch Lengths 544
- Maximum Parsimony and Maximum Likelihood 544
- Phylogenetic Trees as Hypotheses 547

CONCEPT 26.4 An organism's evolutionary history is documented in its genome 548

- Gene Duplications and Gene Families 548
- Genome Evolution 549

CONCEPT 26.5 Molecular clocks help track evolutionary time 549

- Molecular Clocks 549
- Applying a Molecular Clock: The Origin of HIV 550

CONCEPT 26.6 New information continues to revise our understanding of the tree of life 551

- From Two Kingdoms to Three Domains 551
- A Simple Tree of All Life 552
- Is the Tree of Life Really a Ring? 553

27 Bacteria and Archaea 556

OVERVIEW Masters of Adaptation 556

CONCEPT 27.1 Structural and functional adaptations contribute to prokaryotic success 556

- Cell-Surface Structures 557
- Motility 558
- Internal and Genomic Organization 559
- Reproduction and Adaptation 559

CONCEPT 27.2 Rapid reproduction, mutation, and genetic recombination promote genetic diversity in prokaryotes 561

- Rapid Reproduction and Mutation 561
- Genetic Recombination 561

CONCEPT 27.3 Diverse nutritional and metabolic adaptations have evolved in prokaryotes 564

- The Role of Oxygen in Metabolism 564
- Nitrogen Metabolism 565
- Metabolic Cooperation 565

CONCEPT 27.4 Molecular systematics is illuminating prokaryotic phylogeny 565

- Lessons from Molecular Systematics 566
- Archaea 566
- Bacteria 567

CONCEPT 27.5 Prokaryotes play crucial roles in the biosphere 570

- Chemical Recycling 570
- Ecological Interactions 570

CONCEPT 27.6 Prokaryotes have both harmful and beneficial impacts on humans 571

- Pathogenic Bacteria 571
- Prokaryotes in Research and Technology 572

28 Protists 575

OVERVIEW Living Small 575

CONCEPT 28.1 Most eukaryotes are single-celled organisms 575

- Structural and Functional Diversity in Protists 576
- Endosymbiosis in Eukaryotic Evolution 576
- Five Supergroups of Eukaryotes 576

CONCEPT 28.2 Excavates include protists with modified mitochondria and protists with unique flagella 580

- Diplomonads and Parabasalids 580
- Euglenozoans 580

CONCEPT 28.3 Chromalveolates may have originated by secondary endosymbiosis 582

- Alveolates 582
- Stramenopiles 585

CONCEPT 28.4 Rhizarians are a diverse group of protists defined by DNA similarities 589

Forams 589

Radiolarians 589

CONCEPT 28.5 Red algae and green algae are the closest relatives of land plants 590

Red Algae 590

Green Algae 591

CONCEPT 28.6 Unikonts include protists that are closely related to fungi and animals 593

Amoebozoans 594

Opisthokonts 596

CONCEPT 28.7 Protists play key roles in ecological relationships 596

Symbiotic Protists 596

Photosynthetic Protists 597

29 Plant Diversity I: How Plants Colonized Land 600

OVERVIEW The Greening of Earth 600

CONCEPT 29.1 Land plants evolved from green algae 600

Morphological and Molecular Evidence 600

Adaptations Enabling the Move to Land 601

Derived Traits of Plants 601

The Origin and Diversification of Plants 604

CONCEPT 29.2 Mosses and other nonvascular plants have life cycles dominated by gametophytes 606

Bryophyte Gametophytes 606

Bryophyte Sporophytes 609

The Ecological and Economic Importance of Mosses 609

CONCEPT 29.3 Ferns and other seedless vascular plants were the first plants to grow tall 610

Origins and Traits of Vascular Plants 610

Classification of Seedless Vascular Plants 613

The Significance of Seedless Vascular Plants 615

30 Plant Diversity II: The Evolution of Seed Plants 618

OVERVIEW Transforming the World 618

CONCEPT 30.1 Seeds and pollen grains are key adaptations for life on land 618

Advantages of Reduced Gametophytes 618

Heterospory: The Rule Among Seed Plants 619

Ovules and Production of Eggs 619

Pollen and Production of Sperm 620

The Evolutionary Advantage of Seeds 620

CONCEPT 30.2 Gymnosperms bear “naked” seeds, typically on cones 621

Gymnosperm Evolution 621

The Life Cycle of a Pine: A Closer Look 625

CONCEPT 30.3 The reproductive adaptations of angiosperms include flowers and fruits 625

Characteristics of Angiosperms 625

Angiosperm Evolution 628

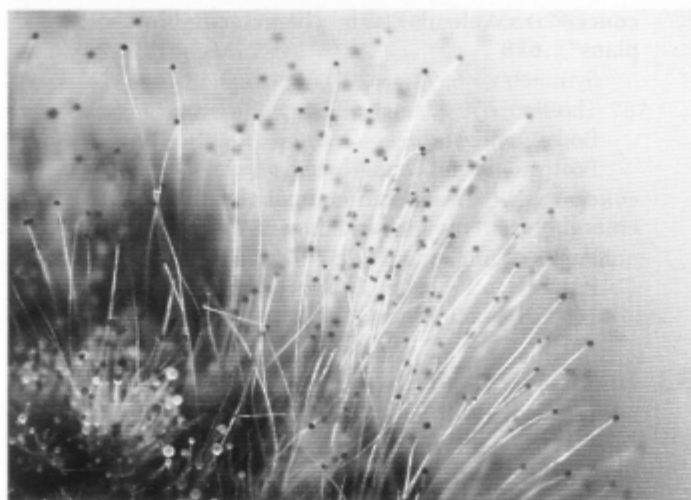

Angiosperm Diversity 630

Evolutionary Links Between Angiosperms and Animals 630

CONCEPT 30.4 Human welfare depends greatly on seed plants 632

Products from Seed Plants 633

Threats to Plant Diversity 633

31 Fungi 636

OVERVIEW Mighty Mushrooms 636

CONCEPT 31.1 Fungi are heterotrophs that feed by absorption 636

Nutrition and Ecology 636

Body Structure 637

CONCEPT 31.2 Fungi produce spores through sexual or asexual life cycles 638

Sexual Reproduction 639

Asexual Reproduction 639

CONCEPT 31.3 The ancestor of fungi was an aquatic, single-celled, flagellated protist 640

The Origin of Fungi 640

Are Microsporidia Closely Related to Fungi? 641

The Move to Land 641

CONCEPT 31.4 Fungi have radiated into a diverse set of lineages 641

Chytrids 641

Zygomycetes 643

Glomeromycetes 644

Ascomycetes 644

Basidiomycetes 646

CONCEPT 31.5 Fungi play key roles in nutrient cycling, ecological interactions, and human welfare 648

Fungi as Decomposers 648

Fungi as Mutualists 648

Fungi as Pathogens 650

Practical Uses of Fungi 651

32 An Introduction to Animal Diversity 654

OVERVIEW Welcome to Your Kingdom 654

CONCEPT 32.1 Animals are multicellular, heterotrophic eukaryotes with tissues that develop from embryonic layers 654

Nutritional Mode 654

Cell Structure and Specialization 654

Reproduction and Development 655

CONCEPT 32.2 The history of animals spans more than half a billion years 656

Neoproterozoic Era (1 Billion–542 Million Years Ago) 656

Paleozoic Era (542–251 Million Years Ago) 657

Mesozoic Era (251–65.5 Million Years Ago) 657

Cenozoic Era (65.5 Million Years Ago to the Present) 658

CONCEPT 32.3 Animals can be characterized by “body plans” 658

- Symmetry 659
- Tissues 659
- Body Cavities 659
- Protostome and Deuterostome Development 660

CONCEPT 32.4 New views of animal phylogeny are emerging from molecular data 661

- Points of Agreement 662
- Progress in Resolving Bilaterian Relationships 662
- Future Directions in Animal Systematics 664

33 Invertebrates 666

OVERVIEW Life Without a Backbone 666

CONCEPT 33.1 Sponges are basal animals that lack true tissues 670

CONCEPT 33.2 Cnidarians are an ancient phylum of eumetazoans 671

- Hydrozoans 672
- Scyphozoans 672
- Cubozoans 672
- Anthozoans 673

CONCEPT 33.3 Lophotrochozoans, a clade identified by molecular data, have the widest range of animal body forms 674

- Flatworms 674
- Rotifers 676
- Lophophorates: Ectoprocts and Brachiopods 677
- Molluscs 677
- Annelids 680

CONCEPT 33.4 Ecdysozoans are the most species-rich animal group 683

- Nematodes 683
- Arthropods 684

CONCEPT 33.5 Echinoderms and chordates are deuterostomes 693

- Echinoderms 693
- Chordates 695

34 Vertebrates 698

OVERVIEW Half a Billion Years of Backbones 698

CONCEPT 34.1 Chordates have a notochord and a dorsal, hollow nerve cord 698

- Derived Characters of Chordates 699
- Lancelets 700
- Tunicates 701
- Early Chordate Evolution 701

CONCEPT 34.2 Craniates are chordates that have a head 702

- Derived Characters of Craniates 702
- The Origin of Craniates 703
- Hagfishes 703

CONCEPT 34.3 Vertebrates are craniates that have a backbone 704

- Derived Characters of Vertebrates 704
- Lampreys 704
- Fossils of Early Vertebrates 704
- Origins of Bone and Teeth 705

CONCEPT 34.4 Gnathostomes are vertebrates that have jaws 705

- Derived Characters of Gnathostomes 705
- Fossil Gnathostomes 706

- Chondrichthyans (Sharks, Rays, and Their Relatives) 706
- Ray-Finned Fishes and Lobe-Fins 708

CONCEPT 34.5 Tetrapods are gnathostomes that have limbs 710

- Derived Characters of Tetrapods 710
- The Origin of Tetrapods 710
- Amphibians 711

CONCEPT 34.6 Amniotes are tetrapods that have a terrestrially adapted egg 713

- Derived Characters of Amniotes 713
- Early Amniotes 715
- Reptiles 715

CONCEPT 34.7 Mammals are amniotes that have hair and produce milk 720

- Derived Characters of Mammals 720
- Early Evolution of Mammals 721
- Monotremes 722
- Marsupials 722
- Eutherians (Placental Mammals) 723

CONCEPT 34.8 Humans are mammals that have a large brain and bipedal locomotion 728

- Derived Characters of Humans 728
- The Earliest Hominins 728
- Australopiths 729
- Bipedalism 730
- Tool Use 730
- Early *Homo* 731
- Neanderthals 731
- Homo Sapiens* 732

UNIT SIX Interview with Patricia Zambryski

Plant Form and Function 736

35 Plant Structure, Growth, and Development 738

OVERVIEW Plastic Plants? 738

CONCEPT 35.1 The plant body has a hierarchy of organs, tissues, and cells 738

- The Three Basic Plant Organs: Roots, Stems, and Leaves 739
- Dermal, Vascular, and Ground Tissues 742
- Common Types of Plant Cells 743

CONCEPT 35.2 Meristems generate cells for new organs 746

CONCEPT 35.3 Primary growth lengthens roots and shoots 747

- Primary Growth of Roots 747
- Primary Growth of Shoots 749

CONCEPT 35.4 Secondary growth adds girth to stems and roots in woody plants 751

- The Vascular Cambium and Secondary Vascular Tissue 751
- The Cork Cambium and the Production of Periderm 754

CONCEPT 35.5 Growth, morphogenesis, and differentiation produce the plant body 755

- Molecular Biology: Revolutionizing the Study of Plants 755
- Growth: Cell Division and Cell Expansion 755
- Morphogenesis and Pattern Formation 757
- Gene Expression and Control of Cellular Differentiation 758

Location and a Cell's Developmental Fate 759
 Shifts in Development: Phase Changes 759
 Genetic Control of Flowering 760

36 Resource Acquisition and Transport in Vascular Plants 764

OVERVIEW Underground Plants 764

CONCEPT 36.1 Land plants acquire resources both above and below ground 764

Shoot Architecture and Light Capture 765
 Root Architecture and Acquisition of Water and Minerals 766

CONCEPT 36.2 Transport occurs by short-distance diffusion or active transport and by long-distance bulk flow 767

Diffusion and Active Transport of Solutes 767
 Diffusion of Water (Osmosis) 768
 Three Major Pathways of Transport 771
 Bulk Flow in Long-Distance Transport 771

CONCEPT 36.3 Water and minerals are transported from roots to shoots 772

Absorption of Water and Minerals by Root Cells 772
 Transport of Water and Minerals into the Xylem 772
 Bulk Flow Driven by Negative Pressure in the Xylem 773
 Xylem Sap Ascent by Bulk Flow: A Review 776

CONCEPT 36.4 Stomata help regulate the rate of transpiration 776

Stomata: Major Pathways for Water Loss 776
 Mechanisms of Stomatal Opening and Closing 777
 Stimuli for Stomatal Opening and Closing 777
 Effects of Transpiration on Wilting and Leaf Temperature 778
 Adaptations That Reduce Evaporative Water Loss 778

CONCEPT 36.5 Sugars are transported from leaves and other sources to sites of use or storage 779

Movement from Sugar Sources to Sugar Sinks 779
 Bulk Flow by Positive Pressure: The Mechanism of Translocation in Angiosperms 780

CONCEPT 36.6 The symplast is highly dynamic 781

Plasmodesmata: Continuously Changing Structures 781
 Electrical Signaling in the Phloem 782
 Phloem: An Information Superhighway 782

37 Soil and Plant Nutrition 785

OVERVIEW "The Nation that Destroys Its Soil Destroys Itself" 785

CONCEPT 37.1 Soil is a living, finite resource 785

Soil Texture 786
 Topsoil Composition 786
 Soil Conservation and Sustainable Agriculture 787

CONCEPT 37.2 Plants require essential elements to complete their life cycle 789

Macronutrients and Micronutrients 790
 Symptoms of Mineral Deficiency 790
 Improving Plant Nutrition by Genetic Modification: Some Examples 792

CONCEPT 37.3 Plant nutrition often involves relationships with other organisms 792

Soil Bacteria and Plant Nutrition 793
 Fungi and Plant Nutrition 795
 Epiphytes, Parasitic Plants, and Carnivorous Plants 797

38 Angiosperm Reproduction and Biotechnology 801

OVERVIEW Flowers of Deceit 801

CONCEPT 38.1 Flowers, double fertilization, and fruits are unique features of the angiosperm life cycle 801

Flower Structure and Function 802
 Double Fertilization 806
 Seed Development, Form, and Function 807
 Fruit Form and Function 809

CONCEPT 38.2 Flowering plants reproduce sexually, asexually, or both 812

Mechanisms of Asexual Reproduction 812
 Advantages and Disadvantages of Asexual Versus Sexual Reproduction 812
 Mechanisms That Prevent Self-Fertilization 813
 Vegetative Propagation and Agriculture 814

CONCEPT 38.3 Humans modify crops by breeding and genetic engineering 815

Plant Breeding 815
 Plant Biotechnology and Genetic Engineering 816
 The Debate over Plant Biotechnology 817

39 Plant Responses to Internal and External Signals 821

OVERVIEW Stimuli and a Stationary Life 821

CONCEPT 39.1 Signal transduction pathways link signal reception to response 821

Reception 822
 Transduction 822
 Response 823

CONCEPT 39.2 Plant hormones help coordinate growth, development, and responses to stimuli 824

The Discovery of Plant Hormones 825
 A Survey of Plant Hormones 827
 Systems Biology and Hormone Interactions 834

CONCEPT 39.3 Responses to light are critical for plant success 835

Blue-Light Photoreceptors 836
 Phytochromes as Photoreceptors 836
 Biological Clocks and Circadian Rhythms 838
 The Effect of Light on the Biological Clock 838
 Photoperiodism and Responses to Seasons 839

CONCEPT 39.4 Plants respond to a wide variety of stimuli other than light 841

Gills in Aquatic Animals 917
Tracheal Systems in Insects 918
Lungs 918

CONCEPT 42.6 Breathing ventilates the lungs 920

How an Amphibian Breathes 920
How a Mammal Breathes 920
How a Bird Breathes 921
Control of Breathing in Humans 921

CONCEPT 42.7 Adaptations for gas exchange include pigments that bind and transport gases 923

Coordination of Circulation and Gas Exchange 923
Respiratory Pigments 923
Elite Animal Athletes 925

43 The Immune System 930

OVERVIEW Reconnaissance, Recognition, and Response 930

CONCEPT 43.1 In innate immunity, recognition and response rely on shared traits of pathogens 931

Innate Immunity of Invertebrates 931
Innate Immunity of Vertebrates 933
Innate Immune System Evasion by Pathogens 936

CONCEPT 43.2 In acquired immunity, lymphocyte receptors provide pathogen-specific recognition 936

Acquired Immunity: *An Overview* 936
Antigen Recognition by Lymphocytes 936
Lymphocyte Development 939

CONCEPT 43.3 Acquired immunity defends against infection of body cells and fluids 942

Helper T Cells: A Response to Nearly All Antigens 943
Cytotoxic T Cells: A Response to Infected Cells 943
B Cells: A Response to Extracellular Pathogens 944
Active and Passive Immunization 947
Immune Rejection 947

CONCEPT 43.4 Disruptions in immune system function can elicit or exacerbate disease 948

Exaggerated, Self-Directed, and Diminished Immune Responses 948
Acquired Immune System Evasion by Pathogens 950
Cancer and Immunity 951

44 Osmoregulation and Excretion 954

OVERVIEW A Balancing Act 954

CONCEPT 44.1 Osmoregulation balances the uptake and loss of water and solutes 954

Osmosis and Osmolarity 954
Osmotic Challenges 955
Energetics of Osmoregulation 957
Transport Epithelia in Osmoregulation 958

CONCEPT 44.2 An animal's nitrogenous wastes reflect its phylogeny and habitat 959

Forms of Nitrogenous Waste 959
The Influence of Evolution and Environment on Nitrogenous Wastes 960

CONCEPT 44.3 Diverse excretory systems are variations on a tubular theme 960

Excretory Processes 961
Survey of Excretory Systems 961
Structure of the Mammalian Excretory System 963

CONCEPT 44.4 The nephron is organized for stepwise processing of blood filtrate 964

From Blood Filtrate to Urine: *A Closer Look* 965
Solute Gradients and Water Conservation 966

Adaptations of the Vertebrate Kidney to Diverse Environments 968

CONCEPT 44.5 Hormonal circuits link kidney function, water balance, and blood pressure 969

Antidiuretic Hormone 969
The Renin-Angiotensin-Aldosterone System 971
Homeostatic Regulation of the Kidney 972

45 Hormones and the Endocrine System 975

OVERVIEW The Body's Long-Distance Regulators 975

CONCEPT 45.1 Hormones and other signaling molecules bind to target receptors, triggering specific response pathways 975

Types of Secreted Signaling Molecules 976
Chemical Classes of Hormones 977
Hormone Receptor Location: *Scientific Inquiry* 977
Cellular Response Pathways 978
Multiple Effects of Hormones 979
Signaling by Local Regulators 980

CONCEPT 45.2 Negative feedback and antagonistic hormone pairs are common features of the endocrine system 981

Simple Hormone Pathways 981
Insulin and Glucagon: Control of Blood Glucose 982

CONCEPT 45.3 The endocrine and nervous systems act individually and together in regulating animal physiology 984

Coordination of Endocrine and Nervous Systems in Invertebrates 984
Coordination of Endocrine and Nervous Systems in Vertebrates 984
Posterior Pituitary Hormones 986
Anterior Pituitary Hormones 988

CONCEPT 45.4 Endocrine glands respond to diverse stimuli in regulating metabolism, homeostasis, development, and behavior 990

Thyroid Hormone: Control of Metabolism and Development 990
Parathyroid Hormone and Vitamin D: Control of Blood Calcium 991
Adrenal Hormones: Response to Stress 991
Gonadal Sex Hormones 993
Melatonin and Biorhythms 994

46 Animal Reproduction 997

OVERVIEW Pairing Up for Sexual Reproduction 997

CONCEPT 46.1 Both asexual and sexual reproduction occur in the animal kingdom 997

Mechanisms of Asexual Reproduction 997
Sexual Reproduction: An Evolutionary Enigma 998
Reproductive Cycles and Patterns 999

CONCEPT 46.3 Fertilization depends on mechanisms that bring together sperm and eggs of the same species 1000

Ensuring the Survival of Offspring 1001
Gamete Production and Delivery 1001

CONCEPT 46.3 Reproductive organs produce and transport gametes 1003

Female Reproductive Anatomy 1003
Male Reproductive Anatomy 1005
Human Sexual Response 1006

Gills in Aquatic Animals 917
Tracheal Systems in Insects 918
Lungs 918

CONCEPT 42.6 Breathing ventilates the lungs 920

How an Amphibian Breathes 920
How a Mammal Breathes 920
How a Bird Breathes 921
Control of Breathing in Humans 921

CONCEPT 42.7 Adaptations for gas exchange include pigments that bind and transport gases 923

Coordination of Circulation and Gas Exchange 923
Respiratory Pigments 923
Elite Animal Athletes 925

43 The Immune System 930

OVERVIEW Reconnaissance, Recognition, and Response 930

CONCEPT 43.1 In innate immunity, recognition and response rely on shared traits of pathogens 931

Innate Immunity of Invertebrates 931
Innate Immunity of Vertebrates 933
Innate Immune System Evasion by Pathogens 936

CONCEPT 43.2 In acquired immunity, lymphocyte receptors provide pathogen-specific recognition 936

Acquired Immunity: *An Overview* 936
Antigen Recognition by Lymphocytes 936
Lymphocyte Development 939

CONCEPT 43.3 Acquired immunity defends against infection of body cells and fluids 942

Helper T Cells: A Response to Nearly All Antigens 943
Cytotoxic T Cells: A Response to Infected Cells 943
B Cells: A Response to Extracellular Pathogens 944
Active and Passive Immunization 947
Immune Rejection 947

CONCEPT 43.4 Disruptions in immune system function can elicit or exacerbate disease 948

Exaggerated, Self-Directed, and Diminished Immune Responses 948
Acquired Immune System Evasion by Pathogens 950
Cancer and Immunity 951

44 Osmoregulation and Excretion 954

OVERVIEW A Balancing Act 954

CONCEPT 44.1 Osmoregulation balances the uptake and loss of water and solutes 954

Osmosis and Osmolarity 954
Osmotic Challenges 955
Energetics of Osmoregulation 957
Transport Epithelia in Osmoregulation 958

CONCEPT 44.2 An animal's nitrogenous wastes reflect its phylogeny and habitat 959

Forms of Nitrogenous Waste 959
The Influence of Evolution and Environment on Nitrogenous Wastes 960

CONCEPT 44.3 Diverse excretory systems are variations on a tubular theme 960

Excretory Processes 961
Survey of Excretory Systems 961
Structure of the Mammalian Excretory System 963

CONCEPT 44.4 The nephron is organized for stepwise processing of blood filtrate 964

From Blood Filtrate to Urine: *A Closer Look* 965
Solute Gradients and Water Conservation 966

Adaptations of the Vertebrate Kidney to Diverse Environments 968

CONCEPT 44.5 Hormonal circuits link kidney function, water balance, and blood pressure 969

Antidiuretic Hormone 969
The Renin-Angiotensin-Aldosterone System 971
Homeostatic Regulation of the Kidney 972

45 Hormones and the Endocrine System 975

OVERVIEW The Body's Long-Distance Regulators 975

CONCEPT 45.1 Hormones and other signaling molecules bind to target receptors, triggering specific response pathways 975

Types of Secreted Signaling Molecules 976
Chemical Classes of Hormones 977
Hormone Receptor Location: *Scientific Inquiry* 977
Cellular Response Pathways 978
Multiple Effects of Hormones 979
Signaling by Local Regulators 980

CONCEPT 45.2 Negative feedback and antagonistic hormone pairs are common features of the endocrine system 981

Simple Hormone Pathways 981
Insulin and Glucagon: Control of Blood Glucose 982

CONCEPT 45.3 The endocrine and nervous systems act individually and together in regulating animal physiology 984

Coordination of Endocrine and Nervous Systems in Invertebrates 984
Coordination of Endocrine and Nervous Systems in Vertebrates 984
Posterior Pituitary Hormones 986
Anterior Pituitary Hormones 988

CONCEPT 45.4 Endocrine glands respond to diverse stimuli in regulating metabolism, homeostasis, development, and behavior 990

Thyroid Hormone: Control of Metabolism and Development 990
Parathyroid Hormone and Vitamin D: Control of Blood Calcium 991
Adrenal Hormones: Response to Stress 991
Gonadal Sex Hormones 993
Melatonin and Biorhythms 994

46 Animal Reproduction 997

OVERVIEW Pairing Up for Sexual Reproduction 997

CONCEPT 46.1 Both asexual and sexual reproduction occur in the animal kingdom 997

Mechanisms of Asexual Reproduction 997
Sexual Reproduction: An Evolutionary Enigma 998
Reproductive Cycles and Patterns 999

CONCEPT 46.3 Fertilization depends on mechanisms that bring together sperm and eggs of the same species 1000

Ensuring the Survival of Offspring 1001
Gamete Production and Delivery 1001

CONCEPT 46.3 Reproductive organs produce and transport gametes 1003

Female Reproductive Anatomy 1003
Male Reproductive Anatomy 1005
Human Sexual Response 1006

CONCEPT 46.4 The timing and pattern of meiosis in mammals differ for males and females 1007

CONCEPT 46.5 The interplay of tropic and sex hormones regulates mammalian reproduction 1007

Hormonal Control of the Male Reproductive System 1010

The Reproductive Cycles of Females 1010

CONCEPT 46.6 In placental mammals, an embryo develops fully within the mother's uterus 1012

Conception, Embryonic Development, and Birth 1013

Maternal Immune Tolerance of the Embryo and Fetus 1016

Contraception and Abortion 1016

Modern Reproductive Technologies 1018

47 Animal Development 1021

OVERVIEW A Body-Building Plan 1021

CONCEPT 47.1 After fertilization, embryonic development proceeds through cleavage, gastrulation, and organogenesis 1022

Fertilization 1022

Cleavage 1025

Gastrulation 1027

Organogenesis 1030

Developmental Adaptations of Amniotes 1033

Mammalian Development 1033

CONCEPT 47.2 Morphogenesis in animals involves specific changes in cell shape, position, and adhesion 1035

The Cytoskeleton, Cell Motility, and Convergent Extension 1035

Role of Cell Adhesion Molecules and the Extracellular Matrix 1036

CONCEPT 47.3 The developmental fate of cells depends on their history and on inductive signals 1038

Fate Mapping 1038

Establishing Cellular Asymmetries 1040

Cell Fate Determination and Pattern Formation by Inductive Signals 1041

48 Neurons, Synapses, and Signaling 1047

OVERVIEW Lines of Communication 1047

CONCEPT 48.1 Neuron organization and structure reflect function in information transfer 1047

Introduction to Information Processing 1048

Neuron Structure and Function 1048

CONCEPT 48.2 Ion pumps and ion channels maintain the resting potential of a neuron 1050

Formation of the Resting Potential 1050

Modeling of the Resting Potential 1051

CONCEPT 48.3 Action potentials are the signals conducted by axons 1052

Production of Action Potentials 1052

Generation of Action Potentials: A Closer Look 1053

Conduction of Action Potentials 1055

CONCEPT 48.4 Neurons communicate with other cells at synapses 1056

Generation of Postsynaptic Potentials 1058

Summation of Postsynaptic Potentials 1058

Modulated Synaptic Transmission 1059

Neurotransmitters 1059

49 Nervous Systems 1064

OVERVIEW Command and Control Center 1064

CONCEPT 49.1 Nervous systems consist of circuits of neurons and supporting cells 1064

Organization of the Vertebrate Nervous System 1065

The Peripheral Nervous System 1068

CONCEPT 49.2 The vertebrate brain is regionally specialized 1070

The Brainstem 1070

The Cerebellum 1072

The Diencephalon 1072

The Cerebrum 1073

Evolution of Cognition in Vertebrates 1074

CONCEPT 49.3 The cerebral cortex controls voluntary movement and cognitive functions 1075

Information Processing in the Cerebral Cortex 1075

Language and Speech 1076

Lateralization of Cortical Function 1077

Emotions 1077

Consciousness 1078

CONCEPT 49.4 Changes in synaptic connections underlie memory and learning 1078

Neural Plasticity 1079

Memory and Learning 1079

Long-Term Potentiation 1080

CONCEPT 49.5 Nervous system disorders can be explained in molecular terms 1080

Schizophrenia 1081

Depression 1081

Drug Addiction and the Brain Reward System 1082

Alzheimer's Disease 1082

Parkinson's Disease 1083

Stem Cell-Based Therapy 1083

50 Sensory and Motor Mechanisms 1087

OVERVIEW Sensing and Acting 1087

CONCEPT 50.1 Sensory receptors transduce stimulus energy and transmit signals to the central nervous system 1087

Sensory Pathways 1087

Types of Sensory Receptors 1089

CONCEPT 50.2 The mechanoreceptors responsible for hearing and equilibrium detect moving fluid or settling particles 1091

Sensing of Gravity and Sound in Invertebrates 1092

Hearing and Equilibrium in Mammals 1092

Hearing and Equilibrium in Other Vertebrates 1096

CONCEPT 50.3 The senses of taste and smell rely on similar sets of sensory receptors 1096

Taste in Mammals 1097

Smell in Humans 1098

CONCEPT 50.4 Similar mechanisms underlie vision throughout the animal kingdom 1099

Vision in Invertebrates 1099

The Vertebrate Visual System 1100

CONCEPT 50.5 The physical interaction of protein filaments is required for muscle function 1105

Vertebrate Skeletal Muscle 1105

Other Types of Muscle 1111

CONCEPT 50.6 Skeletal systems transform muscle contraction into locomotion 1112

Types of Skeletal Systems 1112

Types of Locomotion 1115

Energy Costs of Locomotion 1116

51 Animal Behavior 1120

OVERVIEW Shall We Dance? 1120

CONCEPT 51.1 Discrete sensory inputs can stimulate both simple and complex behaviors 1120

Fixed Action Patterns 1121

Oriented Movement 1122

Behavioral Rhythms 1122

Animal Signals and Communication 1123

CONCEPT 51.2 Learning establishes specific links between experience and behavior 1125

Habituation 1125

Imprinting 1126

Spatial Learning 1126

Associative Learning 1127

Cognition and Problem Solving 1128

Development of Learned Behaviors 1128

CONCEPT 51.3 Both genetic makeup and environment contribute to the development of behaviors 1129

Experience and Behavior 1129

Regulatory Genes and Behavior 1130

Genetically Based Behavioral Variation in Natural Populations 1131

Influence of Single-Locus Variation 1132

CONCEPT 51.4 Selection for individual survival and reproductive success can explain most behaviors 1133

Foraging Behavior 1133

Mating Behavior and Mate Choice 1134

CONCEPT 51.5 Inclusive fitness can account for the evolution of altruistic social behavior 1138

Altruism 1138

Inclusive Fitness 1139

Social Learning 1140

Evolution and Human Culture 1142

CONCEPT 52.3 Aquatic biomes are diverse and dynamic systems that cover most of Earth 1159

Stratification of Aquatic Biomes 1161

CONCEPT 52.4 The structure and distribution of terrestrial biomes are controlled by climate and disturbance 1166

Climate and Terrestrial Biomes 1166

General Features of Terrestrial Biomes and the Role of Disturbance 1167

53 Population Ecology 1174

OVERVIEW Counting Sheep 1174

CONCEPT 53.1 Dynamic biological processes influence population density, dispersion, and demographics 1174

Density and Dispersion 1174

Demographics 1177

CONCEPT 53.2 Life history traits are products of natural selection 1179

Evolution and Life History Diversity 1179

"Trade-offs" and Life Histories 1180

CONCEPT 53.3 The exponential model describes population growth in an idealized, unlimited environment 1181

Per Capita Rate of Increase 1181

Exponential Growth 1182

CONCEPT 53.4 The logistic model describes how a population grows more slowly as it nears its carrying capacity 1183

The Logistic Growth Model 1183

The Logistic Model and Real Populations 1184

The Logistic Model and Life Histories 1185

CONCEPT 53.5 Many factors that regulate population growth are density dependent 1186

Population Change and Population Density 1186

Density-Dependent Population Regulation 1187

Population Dynamics 1188

CONCEPT 53.6 The human population is no longer growing exponentially but is still increasing rapidly 1190

The Global Human Population 1190

Global Carrying Capacity 1193

UNIT EIGHT

Interview with Diana H. Wall

Ecology 1146

52 An Introduction to Ecology and the Biosphere 1148

OVERVIEW The Scope of Ecology 1148

CONCEPT 52.1 Ecology integrates all areas of biological research and informs environmental decision making 1148

Linking Ecology and Evolutionary Biology 1150

Ecology and Environmental Issues 1150

CONCEPT 52.2 Interactions between organisms and the environment limit the distribution of species 1151

Dispersal and Distribution 1152

Behavior and Habitat Selection 1153

Biotic Factors 1153

Abiotic Factors 1154

Climate 1155

Figure 52.2 A mountainside view in early spring.

54 Community Ecology 1198

OVERVIEW A Sense of Community 1198

CONCEPT 54.1 Community interactions are classified by whether they help, harm, or have no effect on the species involved 1198

Competition 1199

Predation 1201

Herbivory 1202

Symbiosis 1202

CONCEPT 54.2 Dominant and keystone species exert strong controls on community structure 1204

Species Diversity 1204

Trophic Structure 1205

Species with a Large Impact 1207

Bottom-Up and Top-Down Controls 1209

CONCEPT 54.3 Disturbance influences species diversity and composition 1211

Characterizing Disturbance 1211

Ecological Succession 1212

Human Disturbance 1214

CONCEPT 54.4 Biogeographic factors affect community biodiversity 1214

Latitudinal Gradients 1215

Area Effects 1215

Island Equilibrium Model 1216

CONCEPT 54.5 Community ecology is useful for understanding pathogen life cycles and controlling human disease 1217

Pathogens and Community Structure 1218

Community Ecology and Zoonotic Diseases 1218

CONCEPT 55.5 Human activities now dominate most chemical cycles on Earth 1236

Nutrient Enrichment 1236

Acid Precipitation 1237

Toxins in the Environment 1238

Greenhouse Gases and Global Warming 1239

Depletion of Atmospheric Ozone 1241

56 Conservation Biology and Restoration Ecology 1245

OVERVIEW Striking Gold 1245

CONCEPT 56.1 Human activities threaten Earth's biodiversity 1246

Three Levels of Biodiversity 1246

Biodiversity and Human Welfare 1247

Three Threats to Biodiversity 1248

CONCEPT 56.2 Population conservation focuses on population size, genetic diversity, and critical habitat 1250

Small-Population Approach 1251

Declining-Population Approach 1253

Weighing Conflicting Demands 1255

CONCEPT 56.3 Landscape and regional conservation aim to sustain entire biotas 1255

Landscape Structure and Biodiversity 1255

Establishing Protected Areas 1257

CONCEPT 56.4 Restoration ecology attempts to restore degraded ecosystems to a more natural state 1260

Bioremediation 1260

Biological Augmentation 1261

Exploring Restoration 1261

CONCEPT 56.5 Sustainable development seeks to improve the human condition while conserving biodiversity 1264

Sustainable Biosphere Initiative 1264

Case Study: Sustainable Development in Costa Rica 1264

The Future of the Biosphere 1265

APPENDIX A Answers A-1

APPENDIX B Periodic Table of the Elements B-1

APPENDIX C The Metric System C-1

APPENDIX D A Comparison of the Light Microscope and the Electron Microscope D-1

APPENDIX E Classification of Life E-1

CREDITS CR-1

GLOSSARY G-1

INDEX I-1

55 Ecosystems 1222

OVERVIEW Observing Ecosystems 1222

CONCEPT 55.1 Physical laws govern energy flow and chemical cycling in ecosystems 1223

Conservation of Energy 1223

Conservation of Mass 1223

Energy, Mass, and Trophic Levels 1223

CONCEPT 55.2 Energy and other limiting factors control primary production in ecosystems 1224

Ecosystem Energy Budgets 1225

Primary Production in Aquatic Ecosystems 1226

Primary Production in Terrestrial Ecosystems 1227

CONCEPT 55.3 Energy transfer between trophic levels is typically only 10% efficient 1228

Production Efficiency 1228

The Green World Hypothesis 1230

CONCEPT 55.4 Biological and geochemical processes cycle nutrients between organic and inorganic parts of an ecosystem 1231

Biogeochemical Cycles 1231

Decomposition and Nutrient Cycling Rates 1234

Case Study: Nutrient Cycling in the Hubbard Brook

Experimental Forest 1234
